### CC9. SFDR DATA REVIEW BY 418 FLTS/DOO

### DEPARTMENT OF THE AIR FORCE HEADQUARTERS 412<sup>TH</sup> TEST WING (AFMC) EDWARDS AFB CALIFORNIA

21 Sep 2010

# MEMORANDUM FOR PRESIDENT, ACCIDENT INVESTIGATION BOARD (ATTN BRIG GEN EVERHART)

FROM: 418 FLTS/DOO

SUBJECT: C-17A, T/N 00-0173, 28 July 2010 / Review of Mishap C-17 Flight Data

- 1. **Contributory Findings**: The data indicate that the aircraft was in a stalled condition upon impact. The data clearly indicate that once the aircraft was established at 2G, there was never a significant effort to reduce or eliminate the added load factor by releasing back stick pressure (or adding forward stick pressure). This accelerated the onset of the stall, increased the rate of deceleration of the aircraft, and decreased the effectiveness of the primary roll controls (ailerons and spoilers) and corrective roll inputs.
- 2. Ancillary Findings: the following paragraphs contain factors that may have contributed to the development of the stall and contributed to failure to detect or correct the onset of the stall, a description of C-17 stall characteristics, and discussion regarding the execution of the flight demo profile.
- a. Factors that may have contributed to the development of the stall or that may have contributed to failure to detect or correct the onset of the stall:
- (1) The data clearly indicates that once the aircraft was established at 2G, there was never a significant effort to reduce or eliminate the added load factor by releasing back stick pressure (or adding forward stick pressure). This accelerated the onset of the stall, and this increased the rate of deceleration of the aircraft. Ultimately, this prevented the aircrew from recovering from the stall. If the load factor had been reduced to 1G or lower, the aircraft would have responded to the corrective inputs much more quickly, and the stall condition could have been corrected.
- (2) Slat retraction is insidiously slow. During high-workload situations (like a descending 2G, 60 deg bank turn), the pilot may not be aware of the slow rate of slat retraction. The tendency is to believe that the slats are retracted immediately upon retraction of the slat handle. Thus the pilot believes he is flying a clean wing aircraft, when he is not, and aircraft performance gradually decreases with slat retraction. Immediately following slat retraction at Vmsr, a significantly smaller portion of load factor is available than with slats extended. An aircraft with slats extended at max power can accelerate through a 2G, 60 deg bank turn; conversely, application of 2G at Vmsr with the slats retracted will result, almost immediately, in a stall warning (stick shaker).
- (3) At high AOA, the flight path vector disappears at the bottom of the HUD. (The angle of attack is approximately equal to the angle between the aircraft water line, i.e., aircraft symbol on HUD/PFD, and the FPV.) This results in reduced pilot awareness of the AOA and reduces his ability to monitor the development of a high AOA condition.
- (4) During operations on the back side of the power curve, any decrease in airspeed (however small) results in a significant increase in drag (e.g., 5 knot decrease in speed results in approximately 25 unit increase in drag). In this condition, even an aircraft at max power does not have enough thrust to recover without acceleration of the aircraft.
- (5) Normal operation of the C-17 does not include aggressive rudder pedal inputs. At nominal AOA, the use of rudder with back stick pressure (2g, for example) accelerates the roll rate of the aircraft. Any delay in removing this rudder input would aggravate any attempts to roll out of the bank. The effectiveness of the rudder

significantly outweights the roll input in accelerated (high G) flight. Additionally, normal pilot proficiency is not comfortably familiar with the increased effectiveness of this flight control surface.

#### b. Description of C-17 Stall Characteristics:

- Stick shaker is a function of the aircraft APDMC (from many inputs including configuration, G, etc.), and it usually occurs at 1.05 to 1.15 times the stall speed.
- (2) Swept wing aircraft tend to stall at the wingtip first, and the stall progresses forward to the wing root. This results in a pitch up as the center of lift (and aerodynamic center) moves forward, a characteristic that tends to increase angle of attack and aggravate the stalled condition. It also results in the loss of aileron effectiveness.
- (3) Roll inputs during stall recovery have an aggravating effect on the angle of attack and stall condition, because deployment of the spoilers (during roll input) results in a nose up pitching moment, tending to increase angle of attack. It is known that this pitch moment could cause the aircraft to significantly exceed the ALS hard limit (tending to result in deep stall, a condition that cannot be recovered with normal pilot technique).
- (4) Wing anhedral (wings slope down when viewed from nose) is destabilizing during banking maneuvers. The upper wing actually has a higher angle of attack than the lower wing. As the aircraft AOA increases, the upper wing will stall first, further decreasing effectiveness of corrective roll inputs.
- (5) The leading edge of the wing has four slat panels on each wing. These panels retract at slightly different rates; this could result in some portions of the wing stalling before other portions, stalling asymmetrically. Asymmetric stalling of the wing could create roll moments that aggravate the overbank or prevent recovery.
  - (6) The aircraft will stall at much higher speeds at 2G than in level flight.
- (7) Normal stall recovery technique is immediate releases in back stick pressure, followed by leveling of the wings.
- (8) A corrective action for deep stall is to extend the slats (but not flaps). Deep stall may require pitch rocking to break the stalled condition.
- (9) Rudder is very effective when the wing is loaded (high G). During steady heading side-slips (cross control straight/level flight), aft stick input will result in significant roll towards the rudder input.

### c. Discussion of Flight Demo Profile:

The flight demo profile is not inherently unsafe, as long as the pilot understands the aircraft response, specifically the loaded rudder rolls. Additionally, I would recommend that the majority of the turn be flown with the slats extended, and that they be retracted as the aircraft is leveled near the last quarter of the turn. A turn performed at 45 degrees angle of bank would provide more protection from stall than 60 degrees angle of bank, especially if the aircraft is in its clean configuration, but in either case, with slats extended the difference is unnoticeable.

You may submit rebuttal comments. Se |                            |  |  |  |  |
| not later than 10 calendar days (30 for non-EAD members) from your date below. If you need additional time, you may request an extension from the individual named above. You may submit attachments (limit to 10 pages), but they must directly relate to the reason this report was referred. Pertinent attachments not maintained elsewhere will remain attached to the report for file in your personnel record. Copies of previous reports, etc. submitted as attachments will be removed from your rebuttal package prior to filing since these documents are already filed in your records. Your rebuttal comments/attachments may not contain any reflection on the character, conduct, integrity, or motives of the evaluator unless you can fully substantiate and document them. Contact the MPF career enhancement section, or the AF Contact Center if you require any assistance in preparing your reply to the referral report. It is import. If to support the receiving a referral report may affect your eligibility for other personnel related actions (e.g. assignments, promotions, etc). You may consult your commander and/or MPF or Air Force Contact Center if you desire more information on this subject. If you believe this report is inaccurate, unjust, or unfairly prejudicial to your career, you may apply for a review of the report under AFI 36-2401, Correction of Officer and Enlisted Evaluation Reports, once the report becomes a matter of record as defined in AFI 38-2406, Attachment 1. |                                                                                                                                                                         |                            |  |  |  |  |
| NAME, GRADE, BR OF SVC OF REFERRING EVALUATOR                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | DUTY TITLE                                                                                                                                                              | DATE                       |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | SIGNATURE                                                                                                                                                               |                            |  |  |  |  |

| INSTRUCTIONS  ALL: Recommendations must be based on performance and the potential based on that performance. Promotion recommendations are prohibited. Do not comment on completion of or enrollment in Developmental Education, advanced education, previous or anticipated promotion recommendations on AF Form 709, OPR endorsement levels, family activities, marital status, race, sex, ethnic origin, age, or religion. Evaluators enter only the last four numbers of SSN.  RATER: Focus your evaluation in Section IV on what the officer did, how well he or she did it, and how the officer contributed to mission accomplishment. Write in concise "bullet" format. Your comments in Section IV may include recommendations for assignment. Provide a copy of the report to the ratee prior to the report becoming                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                         |                            |  |  |  |  |
| a matter of record and provide follow-up feedback to let the ratee know how their performance resulted in this final product.  ADDITIONAL RATER: Carefully review the rater's evaluation to ensure it is accurate, unbiased and uninflated. If you disagree, you may ask the rater to review his or her evaluation. You may not direct a change in the evaluation. If you still disagree with the rater, mark "NON-CONCUR" and explain. You may include recommendations for assignment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                         |                            |  |  |  |  |
| REVIEWER: Carefully review the rater's and additional rater's ratings and comments. If their evaluations are accurate, unbiased and uninflated, mark "CONCUR" and sign the form. If you disagree with previous evaluators, you may ask them to review their evaluations. You may not direct them to change their appraisals. If you still disagree with the additional rater, mark "NON-CONCUR" and explain in Section VI. Do not use "NON-CONCUR" simply to provide comments on the report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                         |                            |  |  |  |  |

| the<br>re- | 2. BACKGROUND: The C-17 aerial demonstration team now includes additional Air National Guard (ANG) associate team members and new additions from the 517AS. The team was expanded in anticipation of upcoming PCS moves as well as to provide the flexibility to fill demo requests while the unit's global mission continues. All crew members have accomplished the training requirements IAW 3rd Wing C-17 Aerial Demonstration Program (15 April 2008) and their training has been documented in the Training Management System (TMS). |                |                     |                    |      |                 |             |                      |                             |  |

### MEMORANDUM FOR 11 AF/CC

FROM: 3 WG/CC

SUBJECT: C-17 Aerial Demo Team Review/Certification

1. The following crewmembers are listed as the Elmendorf C-17 demonstration team. Asterisked crewmembers have recently completed all requirements for upgrade to the indicated crew position. All other crewmembers have previously accomplished their training requirements. Each candidate has been interviewed and is worthy to represent the 3 WG, 11 AF, and PACAF during future C-17 aerial demonstrations.

The purpose of this Post Incident Analysis is to review the entire operation of a C-17 crash response (run #1075) from initial dispatch until termination. In addition, we will discuss the operations' strengths as well as areas for improvement and compare actions taken on scene against current policies.

### Weather

Drizzle, Temp - Mid 50s, Winds - calm

### **Mission Summary**

On 28 July 2010 (1822 hrs), a C-17 aircraft (TN #173, Call sign: Sitka 43) with four personnel took off from Runway 06 on an air show demonstration training sortie. Approximately 60 seconds after take-off the C-17 crashed killing all four aircrew members. The crash site was located 1.25 miles from the end of the runway and .5 mile north of the fire department training area.

### Incident

### 1. Initial Response:

At 1822 hrs on 28 July 2010, JBER Fire Dispatch Center received notification of a C-17 crash. Fire Department crews were immediately dispatched to a full box 120 to the crash site. **Initial Response Crews**: Chief-1, Chief-2, Battalion 1, Battalion 2, Crash 11 (P-23), Crash 12 (P-23), Crash 14 (T-3000), Engine 3, Engine 4, Engine 5, Medic 4, Rescue 7 and Rescue 8, **Secondary Response**: Engine 1, Hazmat 31 & Trailer, Ramp 15, Tender 41 and Tender 42.

**NOTE:** Crash 11, Crash 12, Crash 14, Engine 3, Medie 4, Command vehicles were used initially to contain fire. Additionally, a P-19 from Kulis ANG Fire Department was en-route to the drop zone at Malamute and assisted with fire suppression. Tenders began water shuttle operations after crews were in position. Remaining assets were staged.

Dispatch Time: 0:00:01
Turnout Time: 0:00:00

Travel Time: 0:07:23

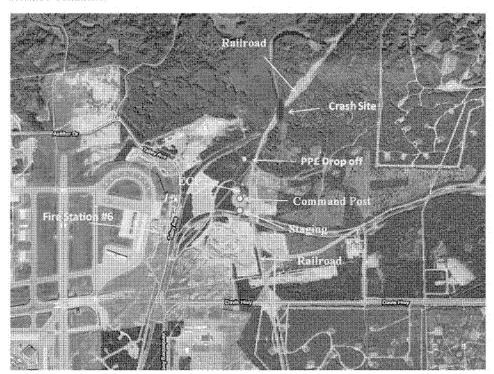

POST INCIDENT ANALYSIS: C-17 Crash Page 2 of 13

Total Time: 111:41:24

**NOTE:** Turnout time was 0:00 based on crews' immediate reaction to crash phone activation and/or actually witnessing the crash occur. It was readily apparent to most crews upon crash phone activation that the C-17 had crashed.

### 2. On-Scene & Initial Size-up:

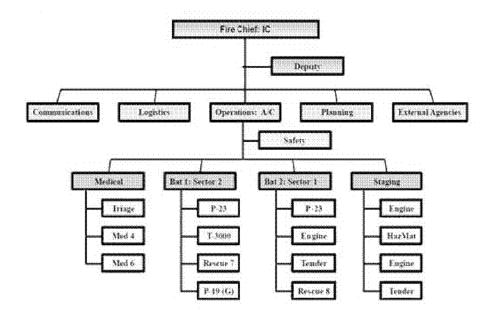

Battalion 2 and Engine 3 were the first units on scene and reported the aircraft crashed just north of the fire department training ground into a wooded area. Access to the site was extremely limited with debris and fire scattered over a large area. Battalion 2 took initial command and directed other arriving vehicles into the crash site. Chief-2 arrived on scene at 1836 hrs and assumed Command.

The incident was broken down into two sectors since the aircraft impact area was divided on both sides of the Alaskan Railroad. Battalion 1 was assigned to Sector 2 which covered all areas east of the train track. Battalion 2 was assigned to Sector 1 which covered all areas west of the train track. The chart below indicates what resources were assigned to each section.

NOTE: External agencies included the Alaskan Railroad, AKNG UH-60 support, Military Police, Security Forces, Kulis ANG FES and Pararescue personnel.

Medical: Mr. & Mr.

Dispatch: SrA

Additional Personnel on-scene: Recalled personnel

### 3. Developing Action Plan:

Once a formal command structure was established, Chief-2 & Battalions 1/2 conducted a face-to-face. A plan was formalized based on the following priorities:

A. Saving lives (continue to search perimeter of crash site for possible survivors)

Page 5 of 13

- B. Fire Extinguishment (fire was extending into heavily wooded area)
- C. Hazmat: Possible hazardous exposure to emergency responders.
  - a. Composite Fibers
  - b. Fuel (JP-8)
  - c. Combustion byproducts
  - d. Compressed gases (Halon bottle, nitrogen & oxygen)

### Saving Lives:

The immediate operational plan was to search and protect potential survivors. Both rescue crews (Rescue 7/8) were tasked to complete a perimeter sweep of the incident site to check for possible survivors and determine fire extension. Command utilized a UH-60 crew hovering over the site to provide a general overview of the extent of the crash site and for fires outside the immediate crash site. Upon return, both crews reported minimal fire extension and did not locate any survivors; however, one body was located.

### Fire Extinguishment:

The fire attack operations had to address aircraft and wildland fires. The bulk of the aircraft fire was extinguished within the first minutes of the operation. Roof turrets were used to knock down a major portion of the blaze. Vehicles were tightly packed into a small area but were able to complete their assignments with no injuries or mishaps. Total estimated agent used: 30,350 gals water, 220 gals AFFF. The following is a list of tactics used during incident.

- 1. Aircraft ARFF drivers used turrets spraying water and foam to knock down the majority of the fire.
- 2. Handlines Due to wooded terrain and land topography, turrets were not able to reach all fire areas. Handlines were vital in controlling and extinguishing remaining fires.
- 3. Wildland fires Crews used Indian packs around perimeter of site were handlines could not reach. A light rain developed in the middle of fire attack operations and helped with mitigation.
- 4. Spot fires There were several stubborn spot fires that continued to burn for hours (ex. brakes). Some hot spots were located under heavy wreckage and crews were unable to get safe access for handline operations.
- 5. Resupply Two tenders completed a continuous water relay operation to a set-up dump tank at the crash site. The dump tank supported all handline operations. On the initial turret attack, two crash truck operations were stopped because of low water. The reserve water they had (500 gallons) was used for handline ops and protection of firefighters. The remaining P-23 was able to protect crews at all times. The two tenders provided 20K gallons of water to the scene.

Sector 1 assets consisted of Battalion 2, P-23 (C-10), Engine 3, Rescue 8 and tender relay. The fire in this section was the first to be brought under control. One of the wheel brakes in this sector continued to flare up for several hours.

Page 6 of 13

Sector 2 assets consisted of Battalion 1, (2) P-23s (C-11, C-14) and Rescue 7. Sector 2 contained most of the aircraft debris and took a lot longer get the fire under control. This sector also contained the majority of the wildland fire.

After the fires were extinguished, the real work began...decontamination/standby/reconstitution.

#### **Hazmat Containment:**

Once the fire was extinguished, Command treated the incident as a hazmat operation. All crews operating in the hot zone were considered potentially contaminated by chemical exposures. All personnel went through a gross decon line and contaminated PPE was dropped off at an established collection point (See map for location).

Command coordinated with Bioenvironmental Engineering (BEE) and Emergency Management (EM) personnel to determine the proper procedure for decontaminating personnel and equipment. The following was determined:

- 1. **Equipment:** All equipment could be decontaminated using soap/water. All equipment items were able to be decontaminated/reconstituted back onto vehicles with the exception of a few items left on scene to support on-going decon operations.
- 2. **PPE:** Crash gear shells were cleaned with soap/water. Liners (structural/crash) were turned into the Quartermaster. Structural gear was cleaned at Station 5 using the extractor washer.
- 3. Mask: Masks were cleaned at Station 1 using the respiratory PPE washer.

### 4. Resupply and Rehabilitation:

Resupply was a major issue during the first few minutes of the operations. The major contributor to the success of the operation was the tender relays. Two tenders (P-26s) were used nonstop until the fire was extinguished. Communication was essential between relays to ensure that the flow of crucial water was not hindered by road blockages. Only one tender could enter or leave at the same time due to the small access to the site.

As the operations continued, eventually crews started being rotated to rehab which was located at the fire department structural training tower. Fresh fruit and water was provided by the FES Logistics Officer to facilitate recovery of personnel.

### 5. Scene Transition from Emergency Operations to Recovery:

The hours following initial extinguishment were spent developing a plan to safe the area so recovery operations could commence. An initial meeting was held with key players and it was decided that the first team to enter the area would consist of EOD, BEE, alert photographer and Crash Recovery personnel. Subsequent entry teams would include AF Medical Examiners, Interim Safety Investigation Board, Search/Recovery, Emergency Management, Engineering Assistants (marking), AK Department of Environmental Conservation and AK Railroad representatives.

Page 7 of 13

POST INCIDENT ANALYSIS: C-17 Crash

Due to continual flare ups/smoke generation entry of the first team was delayed until 29 Jul at 1944 hrs (approx 25.5 hours after crash).

As the recovery operation progressed, two distinct levels of PPE were worn in the exclusion zone; personnel handling debris and disturbing soil wore level C (Tyvek and air purifying respirator (APR)), personnel that did not handle debris and remained in areas where sealant had been applied wore Tyvek with an N95 dust mask. Fit testing operations commenced for both masks by BEE. During most entry operations, Crash Recovery personnel accompanied the various organizations to apply sealant to allow for a lower level of protection so that time in the exclusion zone could be maximized.

The IC began to communicate with the EOC regarding transition to recovery ops IAW AFI 10-2501 and AFMAN 10-2504. At the time, there were no identified/qualified Recovery Operations Chiefs. This issue would continue to be addressed for several days.

Also, high on the priority list was establishing a sustainable area for recovery operations to be based from. Within 24 hours of the incident, the fire department training area was equipped with four Alaskan Small Shelters and two Temper tents with power and heat. Additionally a feeding area, drinking water supply, portable latrines, telephone service, computer service and dumpsters were available. Fortunately, the area had good cell phone reception and which were used extensively throughout the operation to reduce the volume of radio transmissions.

During this period, a plan was initiated to develop a road parallel to the east side of the rail bed to improve Crash Recovery's ability to remove wreckage. The road was completed within days (as outlined below in the Decon section) and resulted in the decon area being relocated to the west side of the tracks. The existing gravel road on the west side of the accident site was also expanded to allow for better access and to provide a more suitable area for decon area.

On 29 Jul, leadership made the decision to continue with the Arctic Thunder Air Show on 31 Jul and 1 Aug while maintaining an aggressive recovery operations schedule. This required an IC to be maintained at the incident site as well as a heavy command presence on the main base. This caused scheduling difficulties and at one point the IC performed a 36-hour shift.

On 30 Jul, 0705 hrs, the Interim Safety Board (ISB) suited up to enter the area and begin their investigation. Aside from evidence collection and human remains recovery, one of their initial priorities was to re-establish railway operations. Rail traffic had totally been cut off between the Port of Anchorage and the rest of the state causing significant concern for Anchorage and communities that depend on the rail for fuel (1.5M gal of aviation fuel daily), equipment and personnel movements.

On 30 Jul, site control started to become more difficult. External agencies such as the ISB, railway crews, AF Medical Examiners, senior leaders, etc. regularly visited the area and tried to directly access the area without IC approval. Most of these personnel were not familiar with the ICS and did not realize that scene control still rested with the IC. To reduce traffic on the road between the ICP and the crash site, the IC obtained two vans/drivers and a shuttle service was established so that only priority vehicles/equipment could enter the site.

Page 8 of 13

POST INCIDENT ANALYSIS: C-17 Crash

On 30 Jul at 1210 hrs, Security Forces began a mobile patrol to maintain predator control in the area. Of note, during this incident there were two occasions that wolves were in the vicinity and one occasion where a bear was spotted. The patrols were successful at keeping the predators from the wreckage area where human remains were located.

On 31 Jul, firefighters were tasked with removal of remains that were pinned in-between two pieces of large metal. This operation was difficult, lasted several hours and required the rotation of crews. This effort required a total of six firefighters and multiple SCBA bottle changes.

On 31 July at 0415 hours, flight data recorder and emergency locator beacon were located and delivered to the ICP. They were maintained there until handed over to ISB.

On 31 July, the railway was opened at 1452 hrs and train operations commenced within 1 hour of opening. Re-opening of the rail presented a unique challenge to ensure all personnel in the area were safe. The IC requested that a rail worker be present with Operations or the IC at all times to provide a 10-minute warning for oncoming trains. Additionally, the train would be limited to 10 mph for safety and to prevent disturbing composites that were in the crash area. This concept worked perfectly and each train movement was preceded with at least a 10-minute warning.

On 31 Jul, Wing leadership decided to allow the family members access to the area as part of the grieving process. The visiting was scheduled for 1 Aug at 1630 hrs and location was several hundred yards south of the crash site but provided a view of the crash site. Civil engineers were tasked to construct stairs leading to the top of the railway bed. They completed the assignment by the evening of 31 Jul.

On 1 August, 1745 hrs, the fourth and final set of remains was located. Due to the families' visit the site was shut down at 1800 hrs with the plan to remove the remains immediately following their departure. At 2006 hrs, family members entered the site and departed at 2119 hrs. At 2219 hrs, the fourth set of remains was removed from area. Operations were ceased for the evening and the following morning was scheduled for the official transfer of authority from the Incident Commander to the Recovery Operations Chief from 3WG Maintenance).

### 6. Decontamination:

On Day 2, a formal decontamination line was established in the southern portion of Sector 2. The decon line was staffed by six personnel (three Fire/three EM). Initially, Fire personnel wore level B splash suit and SCBA and EM personnel wore level B splash suit and full-face APR. Once fit testing was complete all personnel working on the decon line wore APRs. All personnel and equipment entering the accident site exited through the formal decontamination line, with the exception of the containers used to transport the remains and oversized equipment such as railroad repair equipment. These items received a gross decontamination provided by the Rapid Intervention Team (RIT).

To accommodate the two types of PPE and varying levels of exposure the decontamination plan expanded to include a "self help" decon station located in Sector 1. This station consisted of shuffle boxes and a PPE removal area and was designated for personnel wearing Tyvek/N95 masks.

Page 9 of 13

On Day 5, a plan was developed to relocate the formal decon line from Sector 1 to the West access road to allow construction of the new East access road. The decon line was temporarily located in a vehicle turnaround area until debris on the west road was cleared. Once established on the West side, functional operation was transferred to EM entirely.

#### 7. Communication:

Communication methods were effective during this incident. Two channels were used: Crash for fire crews and TAC 1 for Commands. Non-Fire Department personnel who needed a radio were issued one at the ICP. Also, cell phone coverage was available in the area. Phone lines and computer connections were provided as needed.

Communication procedures between the EOC and the ISB President were challenging. Several times during the incident the EOC was unaware of the ISB status or way ahead. When this occurred the IC contacted both directly and passed on information to ensure everybody was aware of the current status.

#### 8. Air Monitoring:

Air monitoring was conducted by BEE throughout the incident and regular reports were provided as seen below. All air monitoring and samples taken from entry personnel showed extremely low levels of contamination; well within acceptable standards.

### Air Sample Example:

Subject: C-17 Sampling Update

Sir ·

All area air samples continue to show levels less than 1% of any applicable standard. Samples are being collected for carbon fibers, total particulates, respirable particulates, and metals. We also received our first sample results for personnel entering the site. So far, all we have is total particulate and respirable particulate results, but I'm happy to report they are less than 10% of any applicable standard. Although this is higher than the area results, it is expected due to the proximity to the site and the activities taking place while the sample was being collected. Additionally, there was only one sample that approached this level – eight other samples were all less than 5% of any standard. We are still waiting for fiber results and metals results from personnel monitoring. Yesterday, we started monitoring Hangar 5 in anticipation of its use for parts storage. This will give us at least 36 hours of sampling as a baseline value prior to any parts entering the facility.

Lt Col

Lt Col Bioenvironmental Engineering Flight Commander 673d MDG JBER Coordinator 673d AMDS/SGPB

Elmendorf AFB, AK 99506

Page 10 of 13

POST INCIDENT ANALYSIS: C-17 Crash

We received several composite fiber sample results today -- these samples were collected on personnel that entered the site between July 28-July 31st. The highest result was about 3% of the appropriate standard. This is certainly good news and continues to show that all of the controls we are utilizing are working to keep exposures low. Also, the Brooks AFB laboratory team has moved up their time table for coming out here -- we now expect them this evening or early tomorrow morning. We are working to meet all requirements so they will have access to the site to conduct their surveys.

Elmendorf AFB. AK 99506 DSN: Comm: Fax:

#### 9. Termination

Senior Fire Officers maintained on-scene incident command until 2 Aug 2010 at 1005 hrs when it was transferred to a Recovery Operations Chief from 3MXG. A full briefing was conducted for the on-coming Recovery Operations Chief and the off-going IC maintained a presence at the Recovery Operations Center for the remaining operational period.

### 10. Exposure Reporting

All personnel that worked at the incident site were required to complete an exposure report. These reports will be managed by the Flight's Safety Officer IAW FMI 32-205.

### 11. Lessons Learned

#### Positives:

- Hustle Crews busted their butts. Not one person complained about any assignment given to them throughout the entire operation!
- Sectoring Dividing the incident into two separate areas made it a lot easier to manage and control personnel
- Communication Communication went fairly well considering the amount of traffic that went over the radio.

Page 11 of 13

#### POST INCIDENT ANALYSIS: C-17 Crash

- Command Post location This was established at the fire department training ground. This worked well in several ways. First, it limited the amount of personnel wanting to see the impact site. It also was a good open area where CE expediently set-up a mini tent city for supporting agencies to work out of.
- Fire control Fire crews were able to bring the majority of fire under control very rapidly. Command was very concerned about fire extension into woods but crews aggressive fire attack kept the fire in check.
- Injuries None throughout entire incident!! Crews were exposed to severe jagged metal debris and rough terrain while fighting fire.
- No free lancing Crews performed the tasks assigned to them
- Working area The small amount of area that Command had to get three crash trucks, engine and a tender in was mind boggling. It was an operation you would never practice but it worked. Note: Not one vehicle received any damage.
- PPE consolidation Command established a tent for storage of all PPE. As agencies provided their PPE and inventory was conducted. This enhanced the ability to determine usage rates and re-supply of needed items.
- Fit testing BEE maintained the capability to conduct face fit testing at the staging area. This streamlined actions required for entry team preparation.
- Incident Command team understanding needs and establishing base camp to meet requirements of prolonged response. Site development prevented tent/equipment movements as staging area matured.
- Operational shift briefings ensured competing priorities were addressed and accomplished in order of safety vs. needs/wants.

### Areas of Improvement:

- During the first two days of the operation, on-scene personnel were supplied with hot meals/drinks provided by the Army Garrison and served by AF personnel. Once it was determined the response had transitioned from emergency ops to recovery ops this support was stopped and responsibility turned over to AF. At this point the EOC informed the IC box lunches would be provided at a cost (\$4.25) and must be pre-ordered by 1900 hrs the evening prior. This is not workable for an incident with rotating crews at a crash site.
- Bioenvironmental Engineering guidance on required respiratory protection for working around potential composite fiber contamination changed between the June 10 Air Show EME and the 28 July 10 C-17 crash.

- Fire maintained Incident Command of the C-17 crash response/recovery operations for over 4.5 days due to the 3 WG/673 ABW not having any identified/qualified Recovery Operations Chiefs as permitted in AF Guidance Memorandum to AFI 10-2501 and AFMAN 10-2504.
- PPE collection point: It would have been beneficial if all PPE would have been separated when dropped off. It would have worked better if we had three separate containers: masks, boots and clothing.
- UHF radio: IC was unable to communicate directly to UH-60 flying over site. This tied up valuable time over the crash net communicating with the tower in a relay operation. Capability is now available.
- Scene control: It didn't take long for bystanders to show up through the woods trying to get pictures. Additionally, as the incident matured, many of the external agencies were not aware that they needed to clear access into the area through the IC.
- Med 4 requested assistance from AFD and one ambulance via the Dispatch channel. This is not standard operating procedure and has already been corrected.
- The initial box alarm was not followed by personnel. Station 4 personnel saw the crash and thought it was in their district so they responded.
- Decontamination: As the operational periods continued, personnel became less concerned about potential exposure. They started breaking some basic rules for proper wear of PPE in a decon line. Personnel required constant reminders at briefings.
- Rehabilitation: We were a little slow on setting up a formal rehab. Crews were resting on site. Most personnel didn't want to go back to the Rehabilitation Area but wanted to keep working. This continued operation could have led to potential accidents.
- EOC was trying to establish the on-scene objectives, however, ICs were able to prevent.
- Certain organizations were slow on showing up for established timelines for working cycles. EM personnel reported late for decon operations and ISB reported 3 hours after the time they had provided to the IC the evening before.
- Recall was fast but all personnel were reporting to Station 1. Most of the people that reported to Station 1 had their gear at another station.
- It was hard to control other agencies from entering the site without proper authorization from the IC.
- Driver/Operators stated it would have helped if they had headsets for the pump panel.
- The amount of waste water and soiled PPE generated on the formal decon line quickly depleted the installation's supply of recovery drums. In hindsight, we could have identified a waste pit

Page 13 of 13

location, pumped the water into the pit, and had the site mitigated as part of the crash cleanup process.

- Several organizations who dressed their own personnel for entry into the hot zone went overboard with applying duct tape on wrists and cuffs. This caused backups during decon when processing larger entry teams and required several team members to be cut out of their PPE.
- From a decontamination perspective, the full-face APR was preferred to the hooded PAPR. The APR was easier to decon and streamlined suit removal while minimizing the risk of cross contamination.
- Breathing valves were mistakenly cleaned in the respiratory washer. They should have been hand washed.
- Crew work/rest cycles did not occur initially. Several crews were on site working for 12-15 hours the first night.
- Crew integrity vs. immediate needs. Reported fire in BX Food Court required an engine crew to be piece-mealed together at the Staging Area vs. an engine company being assigned/dispatched.
- Power requirements need to be identified/validated by other response agencies. Ex. Crash Recovery's Hepa-Vac required generator support. BEE's PAPR batteries had developed a memory and only lasted approximately 30 minutes vs normal 4 hours.

## DD4. ELECTRONIC ADDENDUM CD (ATTACHED)

Due to the size and orientation of some documentation, the board decided to attach those documents in an electronic addendum contained on a CD. The files on the CD are listed as follows:

Accident Investigation Board Maintenance Member

SUBJECT: C-17A Accident Investigation Board / Review of Mishap Aircraft (MA) Maintenance Records; Maintenance Personnel Training Records, and Special Certification Roster (SCR) in Accordance with Air Force Instruction (AFI) 51-503.

- The purpose of this memorandum is to provide a general statement documenting the maintenance
  personnel qualifications, a review of aircraft training records, maintenance training records, and the SCR
  for personnel maintaining and servicing the MA, as a basis for systems appraisals, for the Accident
  Investigation Board (AIB) process.
- 2. For the past two and a half years, I served as a Field Training Detachment and Mission Qualification Training Program instructor, for the Air Force and Mississippi Air National Guard, at Thompson Field Air National Guard Base, Jackson, Mississippi. For the past 6 years I have served as a C-17 Flying Crew Chief (FCC) and maintenance technician. In these positions, I perform all aspects of aircraft maintenance, as well as instruct and test maintenance professionals on various C-17 systems, to include: flight controls, hydraulics, engines, environmental, landing gear, structures, communications and fuels. I have over 17 years of total military service, including 13 years in the aircraft maintenance career field. I have also acquired two Associate Degrees from the Community College of the Air Force, Aviation Maintenance Technology and Instructional Technology, and a Bachelor of Arts Degree in Business Administration from Belhaven University.
- 3. The MA's Air Force Technical Order (AFTO) 781 series forms and the Core Automated Maintenance System for Mobility database (GO81) were reviewed thoroughly to ensure proper maintenance and documentation practices were followed IAW AFTO 00-20-1. All maintenance actions were performed properly and documented. There were minor documentation errors, which had been annotated and addressed by the maintenance supervision, indicating sound oversight of maintenance operations by supervision. Historical records show all Time Change Technical Orders (TCTO) were current. There is no evidence that compliance with maintenance actions, TCTO's or forms documentation were a factor in this mishap.
- I also reviewed all maintenance training records utilizing Training Business Area (TBA) and GO81, containing the Special Certification Roster. All personnel performing maintenance on the MA were fully qualified to perform these tasks IAW AFTO 00-20-1 and AFI 21-101.

### EE3. AIB PILOT ADVISOR MEMORANDUM (SIMULATOR TEST)

#### DEPARTMENT OF THE AIR FORCE

ACCIDENT INVESTIGATION BOARD JOINT BASE ELMENDORF-RICHARDSON, ALASKA

26 September 2010

#### MEMORANDUM FOR RECORD

FROM:

Pilot Member, Accident Investigation Board

SUBJECT: Simulator Test--Re-creation of Mishap Sequence of Events, 2 and 9 Sep 2010

- 1. The purpose of this memorandum is to document the results of the simulator recreations I performed as part of the Accident Investigation Board (AIB) convened to investigate the 28 Jul 10 crash involving C-17A, T/N 00-0173 at Joint Base Elmendorf-Richardson(JBER), AK. I am a current and qualified C-17A instructor pilot at Joint Base Pearl Harbor-Hickam. I have over 2,700 flight hours with approximately 1,300 hours in the C-17. I was appointed Pilot Adviser to the AIB.
- 2. On 2 and 9 Sep 10, I conducted a total of 22 C-17 simulator tests at JBER's C-17 simulator training center to investigate the 28 Jul 10 mishap sequence of events. The C-17 simulator is an artificial re-creation of aircraft flight and various aspects of the flight environment. It incorporates a highly detailed flight deck replica with all controls and aircraft systems, and includes full motion capability with a panoramic visual display system. The simulator provides aviators with the ability to train for real-world-flying situations in a practice setting. Although the simulator is not capable of replicating the exact conditions experienced during the 28 Jul 10 mishap, I was able to duplicate the basic aircraft configuration and outside environmental conditions that the mishap crew encountered.
- 3. On 2 Sep 10, the board president, medical advisor, and I attempted to recreate the mishap flight profile and determine simulator replication capability. We conducted a total of 11 simulated flights. I found the simulator did not accurately replicate aircraft handling characteristics during aggressive flight maneuvering (high bank-angles, rudder inputs, heavy Gload). Although the stall warning system and Angle of Attack Limiter System (ALS) activated in an accurate and reliable manner, the simulator handling characteristics and simulated aircraft responses were minimally affected by the extreme maneuvers. Consequently, the C-17 simulator was ruled out as a valid method for replicating the mishap sortie.
- 4. On 9 Sep 10, the board president, flight surgeon and I conducted a second set of 11 simulator flights. We replicated the standard C-17 aerial demonstration Profile 3 as described in AFI 11-246, Vol. 6, Chp. 3. We duplicated the mishap aircraft's weight and the environmental conditions at the time of the mishap sortie. I determined that when flown IAW AFI 11-246 (i.e.,

45-degree bank-angle turns, on speed Vmco climb to 1,500 feet AGL and rudder use as needed), Profile 3 should not result in stall warning or ALS activation.

- 5. From these simulator profiles I concluded:
- a. Due to unrealistic handling characteristics and simulated aircraft responses during high bank-angles, rudder inputs and G-forces, the C-17 simulator was not a valid method for replicating the stalled condition of the mishap sortie.
- b. The simulator's stall warning and ALS systems activated in an accurate and reliable manner during aggressive maneuvering (i.e., high bank angles, full rudder inputs and control stick movements).
- c. When flown IAW AFI 11-246, Vol. 6, Chp 3, Profile 3 should not result in stall warning or ALS activation.

USAF

Pilot Member, Accident Investigation Board

### EE4. AIB PILOT ADVISOR MEMORANDUM (AERIAL DEMO CHECKLIST)

#### DEPARTMENT OF THE AIR FORCE

ACCIDENT INVESTIGATION BOARD JOINT BASE ELMENDORF-RICHARDSON, ALASKA

26 September 2010

#### MEMORANDUM FOR RECORD

FROM:

Pilot Member, Accident Investigation Board

SUBJECT: Aerial Demonstration Checklist

- 1. The purpose of this memorandum is to examine unapproved checklist use by the mishap crew. The mishap crew used an unauthorized checklist documented on the Cockpit Voice Recorder (CVR) transcript as the "Following Before Takeoff Aerial Demonstration Checklist". Additionally, during the course of the investigation, the board determined that there was substantial confusion among many current JBER C-17 demonstration crewmembers regarding appropriate checklist use.
- 2. The board was provided with a demonstration checklist that the mishap pilot emailed to nearly all 3rd Wing demonstration crewmembers on 29 June, 2010. The mishap pilot's email contained an attached document, titled "3WG Aerial Demonstration Checklist". This "demonstration checklist" closely resembled the approved standard C-17A Technical Order (T.O.) checklist. It is likely that this was the checklist captured on the CVR.
- 3. Despite the resemblance to the approved T.O. checklist, the demonstration checklist includes substantial differences. Major alterations include:
  - a. Technique incorporation. Aircrew checklists steps are procedural and therefore mandatory. In contrast, techniques are the pilot's own method of accomplishing tasks and should never be confused with procedures. Confusing techniques and procedures can lead to unsafe flight operations. The demonstration checklist combines technique with procedure as evidenced by this opening note: Aerial Demonstration profiles are inherently technique-oriented. This checklist is an aid to the profile and may be modified to suit the situation and the desires of the aircraft commander. It is intended to minimize CAWS alerts and extraneous switchology while airborne.
  - b. Checklist item de-emphasis. Approved T.O checklists use a standard text font size for aircrew readability and emphasis. In the interests of safety, checklist font sizes should not be adjusted by aircrew without proper authorization and approval. Unauthorized altering of checklist font size can lead to missed checklist steps and unsafe flight operations. The demonstration checklist contains 20 very small font "de-emphasized" items.

- c. Reassigned challenge-response items. Challenge-response means that a checklist step(or action) must be requested by one aircrew member (challenge) and acknowledged by another aircrew member (response). This is designed to promote essential communication between crewmembers during critical phases of flight. The demonstration checklist reassigned multiple challenge-response checklist items, (such as landing gear and flap configurations) which shifted vital communication away from pilot-to-copilot and instead to copilot-to-safety observer. Although it did not directly contribute to this mishap, removing the pilot from challenge-response checklist items could have led to unsafe flight operations.
- d. Added sub-checklists. Added sub-checklists included: "Following Before Takeoff", "Following Before Landing", "After Touchdown", and "Following Demonstration" checklists. Adding sub-checklists confuses technique with procedure and can be contrary to good flight discipline. Pilot techniques should be separate and apart from T.O. checklists. Adding techniques to a T.O. checklist, despite good intent, can lead to unsafe flight operations.
- 4. The aerial demonstration checklist was in widespread circulation among 3rd Wing C-17 demonstration crewmembers. Overall, the proliferation of an unapproved Aerial Demonstration checklist reflects poorly on flight discipline. It was used by the mishap crew and therefore relevant, but not causal, to the mishap. The referenced copy of the "3rd Wing Aerial Demonstration Checklist" is attached to this report.

### EE5. AIB LEGAL ADVISOR MEMORANDUM (BANGKOK VIDEO)

#### DEPARTMENT OF THE AIR FORCE

ACCIDENT INVESTIGATION BOARD JOINT BASE ELMENDORF-RICHARDSON, ALASKA

21 September 2010

#### MEMORANDUM FOR RECORD

FROM:

Legal Advisor, Accident Investigation Board

SUBJECT: C-17A Accident Investigation Board / Bangkok 2009 Airshow Video

- 1. The purpose of this memorandum is to provide a written description of the video footage obtained from WITNESS 3, 517 Airlift Squadron (517 AS), Joint Base Elmendorf-Richardson (JBER), Alaska.
- 2. BACKGROUND: WITNESS 3 is a certified C-17 aerial demonstration pilot with the 517 AS. MP was his demonstration upgrade instructor pilot. He flew aerial demonstrations with MP and MSO as a hard crew, along with WITNESS 8 (as an aerial demonstration safety observer) and SSgt , a demonstration-certified loadmaster.
- a. The Accident Investigation Board (AIB) learned that MITNESS 3 accompanied MP , MSO and WITNESS 8 to Thailand and Korea to perform a C-17 aerial demonstration, during which MP performed Profile 3 (also known as the "12-minute" program). (See Air Force Instruction 11-246, Volume 6, Chapter 3 C-17 Aerial Demonstration Profiles.) During their aerial demonstration performance in Thailand, WITNESS 3 used a personal digital camera to record the flight from inside the cockpit of their aircraft.
- b. The AIB Board President (BP), Brig Gen Carlton D. Everhart II, interviewed witness 3 under oath on 15 September 2010. During the interview, the BP specifically requested that WITNESS 3 provide a copy of the video for the board to review. On 17 September 2010, witness 3 produced a DVD-ROM with two digital video recordings: one video entitled "Bangkok 2009" and one video entitled "Osan 2009".
- c. WITNESS 3 digitally recorded these two videos and placed into a DVD movie format using an Apple computer. RECORDER converted the format of both videos to MP3 version for inclusion with this report. The Bangkok 2009 video is 11 minutes and 59 seconds in length. It appears that WITNESS 3 operated the camera to record the video, which also includes sound).
- d. Both MP and MSO were killed in the C-17A fatal mishap that occurred on 28 July 2010 at JBER. The mishap is the subject of the present AIB. The AIB determined

that MP was the mishap pilot (MP) and MSO was the mishap safety observer (MSO).

- 3. BANGKOK 2009 VIDEO DESCRIPTION<sup>1</sup>. Supplemented by the video shows the following:
- a. The video begins with a ground crewmember marshaling MP, who was sitting in the left seat (also known as the pilot position) to the appropriate runway. MSO was the in the right seat (also known as the co-pilot position); WITNESS 8 was the safety observer in the right additional crewmember (RACM) seat. WITNESS 3 is not in the camera's view. He also cut the video to show SSgt WITNESS in the cargo compartment, strapped in the loadmaster seat.
  - b. At 1:22: MP performs a maximum power takeoff/climb out.
- c. At 2:04: MP executes a left turn (presumably 80 degrees of heading change) at an unknown bank angle. He completes the maneuver at 2:10.
- d. At 2:18: MP executes a right turn (presumably 260 degrees of heading change) at an unknown bank angle.
- e. From 2:22 through 2:41: The aural stall warning enunciates continuously throughout the turn. During this period, MSO says "keep your turn tight" and "watch your altitude." MSO says "Good line up."
  - f. At 2:41: MP completes the right turn maneuver.
- g. At 2:50: MSO says "300 knots" and WITNESS 8 says "and show center". The runway can be seen ahead of the aircraft, out of the front cockpit window.
- h. At 2:56: MP executes a right turn (presumably 50 degrees of heading change) at an unknown bank angle. He completes the maneuver at 3:06.
  - i. At 3:06: MP rolls the aircraft level.
- j. At 3:12: MP turns the aircraft towards the left (presumably 310 degrees of heading change) at an unknown bank angle.
  - k. At 3:39: While the aircraft is still in a left turn, WITNESS 8 says "200 high".
  - 1. At 3:42: MP completes the left turn maneuver.

\_\_\_\_

All times approximated; all descriptions are based on Profile 3, as described in AFI 11-246, Vol 6, Chp. 3.

- m. At 3:52: MP turns the aircraft towards the left at an unknown bank angle. He completes the maneuver at 3:57. The runway can be seen ahead of the aircraft, out of the front cockpit window.
  - n. At 4:08: MSO says "your about 100 high."
- o. At 4:28: WITNESS 3 zooms the camera lens to record the airshow attendees watching the show on the ground.
  - p. At 4:54: MP turns the aircraft left at an unknown bank angle.
  - q. At 5:02: MSO says "coming up on about 160 knots."
  - r. At 5:03: MP completes the left turn maneuver.
  - s. At 5:05: MP turns the aircraft to the right at an unknown bank angle.
- t. At 5:09: The auto-throttle and stall warnings enunciate. MSO says "add more power . . . 150 knots."
  - u. At 5:20: The stall warning enunciates.
  - v. At 5:24: MSO says "160," then "power's good," then "100 low."
- w. At 5:39: WITNESS 3 zooms the camera lens to record the airshow attendees watching the show on the ground.
- x. At 5:44: MP begins a 360-degree turn to the right at an unknown bank angle.
  - y. At 5:47: the "auto throttle" warning enunciates.
  - z. At 6:17: MP completes the 360-degree turn.
  - aa. At 6:23: MP begins a right turn at an unknown bank angle.
  - bb. At 6:25: the "auto throttle" warning enunciates.
- cc. At 6:46: MP begins a left turn at an unknown bank angle. He completes the turn at 7:20.
- dd. From 7:20 to 7:36: MSO says "coming up on 300 feet. Looks safe. [inaudible]." The recording cuts from the cockpit to the cargo compartment. The starboard side

door is open. The Loadmaster appears to be mostly outside the door. The camera view turns forward towards the cockpit.

- ee. At 7:36: the aircraft is backing up on the runway.
- ff. At 7:55: the "flaps" alert enunciates.
- gg. At 8:20: The aircraft begins moving forward.
- hh. At 8:32: The aircraft taxis to the right, towards its parking spot.
- ii. At 9:00: the "spoiler not armed" alert enunciates.
- jj. At 9:08: the camera view swings towards the rear of the aircraft. The Loadmaster can be seen sitting on the cargo ramp.
- kk. At 10:15: The "stabilizer motion" alert enunciates. The aircraft continues to taxi towards a parking position.
- 11. At 11:09: the camera records the spectators as the aircraft taxis towards the ground crew member.
- mm. At 11:39: The camera view swings towards the rear of the aircraft. The Loadmaster can be seen sitting on the cargo ramp waving to the spectators in the distance.
  - nn. At 11:58: Video footage ends.
- 4. The AIB reviewed the "Osan 2009" video. One of the aircrew attached the camera on top of the dashboard, in front of the cockpit's left seat (pilot flying seat). The camera showed the forward-view perspective. It is worth noting that the stall warning enunciated at 00:50, 1:07, and 1:13, during the 260-degree turn.

USAF Legal Advisor, Accident Investigation Board

### EE6. AIB LEGAL ADVISOR MEMORANDUM (JBER FIRE SERVICES RELEASE)

#### DEPARTMENT OF THE AIR FORCE

ACCIDENT INVESTIGATION BOARD JOINT BASE ELMENDORF-RICHARDSON, ALASKA

26 September 2010

#### MEMORANDUM FOR RECORD

FROM:

Legal Advisor, Accident Investigation Board

SUBJECT: C-17A Accident Investigation Board / JBER Fire Emergency Services Post Incident Analysis Report

- 1. We received and reviewed the JBER Fire Emergency Services Post Incident Analysis Report. It contained 13 pages. The AIB report referenced search and rescue efforts in the Sequence of Events section. The referenced information is contained on page 1 of the report. Therefore, we included only page 1 in Tab CC. The complete report is included with the evidence collected and provided to PACAF.
- 2. Also, the report is marked "FOUO Not for public release". However, I spoke to Chief , Fire & Emergency Services, who provided the report to the AIB. He authorized its release of the report. He also told me the reason for the marking was to prevent unauthorized release of information during the SIB or AIB investigations. (Attachment.)

USAF Legal Advisor, Accident Investigation Board

# EE7. AIB MEDICAL ADVISOR MEMORANDUM (REVIEW OF MEDICAL RECORDS)

#### DEPARTMENT OF THE AIR FORCE

ACCIDENT INVESTIGATION BOARD
JOINT BASE ELMENDORF-RICHARDSON, ALASKA

27 September 2010

#### MEMORANDUM FOR RECORD

FROM: Accident Investigation Board Elmendorf Air Force Base, Alaska

SUBJECT: Review of Medical Records.

- 1. The purpose of this memorandum is to provide a general statement documenting the review of medical records for flight crew and ground support personnel maintaining and servicing the mishap aircraft (MA), C-17A, 00-173, that crashed on 28 July 2010. The medical records of the MC are not included in the Accident Investigation Board (AIB) report in accordance with Air Force Instruction 51-503, paragraph 5.8.6.
- 2. I reviewed all relevant medical records for each crewmember involved in the mishap sortie. All four crewmembers had valid AF 1042, Medical Recommendation for Flying or Special Operational Duty physicals. The only discrepancy noted was a missing "hard copy" AF 1042 (RTFS) for MCP. However, his electronic medical record noted that he had been "Returned to Flying Status" on 7 July 2010.
- 3. Mishap sortic crewmember dental records were not available for review. Per evidence record transfer documents provided by the Safety Investigation Board, these records were sent by FedEx to Dover, MD, and were not available for review.
- 4. I reviewed the autopsy report for each crewmember involved in the mishap sortie. The autopsies were performed at the 673<sup>rd</sup> MDG, Joint Base Elmendorf-Richardson, AK.. The cause of death for all crewmembers was listed as "Multiple Injuries" and "Accidental". Incidental findings of coronary artery disease was discovered on two mishap crewmembers but was not a factor in the mishap. No other incidental findings or discrepancies were discovered reviewing these reports.
- 5. 72-hour and 14-day histories were obtained for the MP, MCP, and MSO from surviving family and friends. No evidence was discovered to indicate unusual habits or behavior contributed to this mishap.
- 6. I contacted MLM's wife to obtain the MLM's 72-hour and 14-day histories. She declined to be interviewed, but verified that she provided the information to the Safety Investigation Board shortly after the mishap. The SIB considered her interview privileged. Nothing in the MLM's medical records I reviewed indicates any habits or behavior contributed to this mishap.

- 7. I reviewed all toxicology reports for the four mishap sortic crewmembers and 18 ground support personnel tested. All results were negative except for one ground support individual. This individual tested positive for one substance but held a valid prescription and carried an appropriate diagnosis. This individual had no direct contact with the mishap aircraft and was no factor in the mishap.
- 8. Cockpit Voice Recorder Transcripts prior to takeoff noted a discussion between the mishap pilot and the mishap crew discussing an injury to the mishap pilot's right thumb. No medical records were identified indicating that the mishap pilot sought medical evaluation and treatment for this injury. Due to the extensive amount of blunt force trauma sustained in the mishap, no possibility existed to accurately evaluate this injury post-mortem. Its role in this mishap, if any, is indeterminate.

MC, FS, OHANG Medical Advisor, Accident Investigation Board

# EE8. AIB PILOT ADVISOR MEMORANDUM (C-17 STALL RECOVERY PROCEDURES AND WEATHER DEFINITIONS)

#### DEPARTMENT OF THE AIR FORCE

ACCIDENT INVESTIGATION BOARD
JOINT BASE ELMENDORF-RICHARDSON, ALASKA

27 September 2010

#### MEMORANDUM FOR RECORD

FROM:

Pilot Member, Accident Investigation Board

SUBJECT: C-17 Stall Recovery Procedures and Weather Definitions

- 1. The purpose of this memorandum is to clarify verbiage for stall recovery procedures for the C-17A, to establish a working definition of the weather terms "broken" and "overcast", and to establish airspeed usage throughout the AIB report.
- 2. For purposes of the AIB report, stall recovery steps for the C-17A is defined as: positive forward stick (to include: release stick pressure, neutral control stick pressure, release backstick pressure, release pitch), thrust increase to max (to include: MAX, maximum thrust, MAX power), and roll input to wings level (to include: roll out, left roll, left aileron, left roll). Large rudder inputs should be avoided during stall recovery.
- 3. The weather term "broken" describes cloud cover more than 62% to 87% of the sky. The term "overcast" describes cloud cover which totally covers the sky. These definitions were derived from the AFH 11-203V1 and have been condensed for public understanding.
- 4. Throughout the AIB report, all airspeeds referenced are calibrated airspeeds, or KCAS. These speeds are abbreviated "kts" to save space in the report. Calibrated airspeeds are the speeds presented on primary aircraft displays, and are the speeds the pilots would have viewed and referenced during the mishap sortie. This differs slightly from the airspeed presented in the animation. Despite the label "Cal. Airspeed", the airspeed displayed in the animation is Indicated Airspeed. This discrepancy exists because the C-17 flight data recorder captures Indicated Airspeed, but the software limitations only allow the display field "Cal. Airspeed". Overall, there is negligible difference between these two speeds for the mishap flight conditions.

| SUBJECT: C-17A Accident Investigation Board / Tab V - Cockpit Voice Recorder                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1. The purpose of this memorandum is to provide a written explanation of Cockpit Voice Recorder (CVR) Transcription (Tab V-401 through V-429).                                                                                                                                                                                                                                                                                                                                           |
| 2. Although one of the Safety Investigation Board (SIB) members transcribed the CVR (Tab N-2 through N-18), the member was not a certified court reporter. When was detailed to assist the Accident Investigation Board (AIB) as the court reporter, he transcribed a longer portion of the CVR, which included the mishap sortic. The transcript is included in the AIB report in Tab V Tab V-401 through V-429.                                                                        |
| 3. is fully qualified and certified to perform transcription services.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| a. entered the Air Force in July 1998 and cross-trained into the legal career field in January 2003 as a paralegal. In 2007, received a Bachelor of Science (summa cum laude) in Criminal Justice Administration from Park University. Additionally, in 2010, he received a Master of Science (summa cum laude) in Criminal Justice from Troy University.                                                                                                                                |
| b. In 2008, trained to become an Enlisted Court Reporter (ECR). He graduated second in his class at the Army Judge Advocate General's Court Reporter Course, and was sworn in as a court reporter by the Chief Judge of the United States Army. In 2009, he completed the Army Senior Court Reporter Course, and instructed at an Air Force Court Reporter Refresher Course at Nellis Air Force Base, Nevada. In 2010, completed the Army Court Reporter Redictation Enhancement Course. |
| c. has served as an Enlisted Court Reporter for almost three years. During this time, he has traveled worldwide for various judicial and investigative proceedings, to include 10 Aircraft Accident Investigation Boards. He and has an estimated 700 hours recording experience, and produced approximately 14,000 pages of transcription.                                                                                                                                              |
| 4. Based on extensive experience, the board resolved any differences between the two CVR transcripts using transcription.                                                                                                                                                                                                                                                                                                                                                                |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## **FACT SHEET**

## U.S. Air Force Fact Sheet PACIFIC AIR FORCES

Pacific Air Forces, with headquarters at Hickam Air Force Base, Hawaii, is a major command of the U.S. Air Force and is the air component of the U.S. Pacific Command.

#### Mission

PACAF's primary mission is to provide U.S. Pacific Command integrated expeditionary Air Force capabilities to defend the homeland, promote stability, dissuade/deter aggression, and swiftly defeat enemies.

The command's vision is to bring the full power of America's Air Force and the skill of its Airmen to promote peace and stability in the Asia-Pacific region.

PACAF's area of responsibility extends from the west coast of the United States to the east coast of Africa and from the Arctic to the Antarctic, covering more than 100 million square miles. The area is home to 50 percent of the world's population in 36 nations and over one-third of the global economic output. The unique location of the Strategic Triangle (Hawaii-Guam-Alaska) gives our nation persistent presence and options to project U.S. airpower from sovereign territory.

#### Personnel and Resources

The command has approximately 43,000 military and civilian personnel serving in nine strategic locations and numerous smaller facilities, primarily in Hawaii, Alaska, Japan, Guam and South Korea. Approximately 340 fighter and attack aircraft are assigned to the command with about 100 deployed aircraft rotating on Guam. PACAF will be home to three of the seven F-22 Raptor fighter squadrons, and is already home to the only two C-17 Globemaster III units based outside the continental United States.

#### Organization

PACAF's major units are 5th Air Force, Yokota Air Base, Japan; 7th Air Force, Osan AB, South Korea; 11th Air Force, Elmendorf Air Force Base, Alaska; and 13th Air Force, Hickam AFB, Hawaii

Major units also include 3rd Wing, Elmendorf AFB; 8th Fighter Wing, Kunsan AB, South Korea; 15th Airlift Wing, Hickam AFB; 18th Wing, Kadena AB, Japan (Okinawa); 35th Fighter Wing, Misawa AB, Japan; 36th Wing, Andersen AFB, Guam; 51st Fighter Wing, Osan AB; 354th Fighter Wing, Eielson AFB, Alaska; and 374th Airlift Wing, Yokota AB, Japan.

#### History

PACAF traces its roots to the activation of Far East Air Forces, Aug. 3, 1944, at Brisbane, Queensland, Australia. FEAF was subordinate to the U.S. Army Forces Far East and served as the headquarters of Allied Air Forces Southwest Pacific Area. By 1945, three numbered air forces — 5th, 7th and 13th — were supporting operations in the Pacific. At that time, the Army Air Forces in the Pacific became part of the largest and most powerful military organization ever

http://www.af.mil/information/factsheets/factsheet print.asp?fsID=164

fielded by any country in the world.

After World II, FEAF and 5th Air Force remained in Japan, while 7th Air Force operated from Hawaii, and 13th Air Force from the Philippines. In the post-war years, FEAF was designated the theater air force for the Far East Command. All air forces in the Far East and Southwest Pacific were placed under one Air Force commander for the first time.

When the North Koreans crossed the 38th parallel June 25, 1950, FEAF consisted of 5th Air Force, 13th Air Force, 20th Air Force and the Far East Materiel Command. Four years after the Korean War armistice, FEAF was redesignated Pacific Air Forces and transferred its headquarters to Hickam.

By 1960, PACAF maintained a combat-ready deterrent force of some 35 squadrons, operating from 10 major bases in a half-dozen countries. In the early 1960s communist military strength and firepower in Vietnam increased. As a result, PACAF began a buildup in the area with the addition of troops and better arms and equipment.

Combat aircraft of PACAF flew their last strikes in Cambodia Aug. 15, 1973, writing the final chapter to the long and costly history of active American participation in the Indochina War. The post-Vietnam era found the command focusing on improving its readiness.

PACAF's organizational structure saw a marked period of rapid and extensive changes. Andersen was reassigned from Strategic Air Command in 1989, and 11th Air Force became a part of the command in late 1990. Following the volcanic eruption of Mount Pinatubo, Clark AB, the Philippines, was closed and 13th Air Force relocated to Andersen in 1991.

In 1992, changes took place in force structure within PACAF as the command assumed control of theater-based tactical airlift wings, theater C-130 aircraft and crews, and associated theater C-130 support. PACAF also gained control of all operational support aircraft and all aeromedical airlift assets in the Pacific.

Throughout its history PACAF has played a vital role in world events. In addition to its key combat role in World War II, Korea and Vietnam, PACAF units fought in Desert Storm in 1991, and they continue to deploy to Saudi Arabia, Turkey and Italy for peacekeeping operations. PACAF provided its expertise, aircraft, personnel and equipment to facilitate the new Expeditionary Air Force, especially as it applied to successful airbridge operations spanning the vast Pacific Ocean. Following the Sept. 11, 2001, terrorist attacks on the United States, PACAF again demonstrated its intrepid spirit through its units deployed in support of operations Noble Eagle and Enduring Freedom.

Since 1944, the command has participated in more than 140 humanitarian operations within its area of responsibility and beyond. In these operations PACAF people quickly and efficiently airlifted food, medicine and other supplies to areas devastated by storms, floods, earthquakes, volcanoes and other natural disasters.

Additionally, the command supported three of the largest evacuations ever undertaken by the Air Force: the Newlife evacuation of Vietnamese in 1975, the Fiery Vigil evacuation of Clark Air Base, Philippines, after the 1991 volcanic eruption of Mount Pinatubo, and the Pacific Haven operation to support and resettle Kurdish evacuees in 1997.

Recent efforts include support of tsunami relief efforts during Operation Unified Assistance in 2006. PACAF stood up a 24/7 air operations center to organize rescue and relief flight efforts by the Air Force as well as Navy, Marine, Coast Guard and other nations. In 2008, PACAF delivered winter supplies and food to China to help victims of China's worst winter storms in more than 50 years. PACAF also delivered 2,000,000 pounds of relief supplies after China was hit by a devastating earthquake and assisted with Burma cyclone relief by preparing C-17s to transport personnel and supplies.

http://www.af.mil/information/factsheets/factsheet\_print.asp?fsID=164

AF.mil - Fact Sheet (Printable): PACIFIC AIR FORCES

Page 3 of 3

For more than five decades PACAF has served in defense of the nation. The command continually prepares to bring air power quickly and decisively to the far reaches of the Pacific.

#### FF2. AIR NATIONAL GUARD FACT SHEET

AF.mil - Fact Sheet (Printable): AIR NATIONAL GUARD

Page 1 of 3

## **FACT SHEET**

## U.S. Air Force Fact Sheet AIR NATIONAL GUARD

The Air National Guard is administered by the National Guard Bureau, a joint bureau of the departments of the Army and Air Force, located in the Pentagon, Washington, D.C. It is one of the seven Reserve components of the United States armed forces that augments the active components in the performance of their missions.

#### Mission

The Air National Guard has both a federal and state mission. The dual mission, a provision of the U. S. Constitution, results in each guardsman holding membership in the National Guard of his or her state and in the National Guard of the United States.

#### Federal Mission

The Air National Guard's federal mission is to maintain well-trained, well-equipped units available for prompt mobilization during war and provide assistance during national emergencies (such as natural disasters or civil disturbances). During peacetime, the combatready units and support units are assigned to most Air Force major commands to carry out missions compatible with training, mobilization readiness, humanitarian and contingency operations such as Operation Enduring Freedom in Afghanistan. Air National Guard units may be activated in a number of ways as prescribed by public law. Most of the laws may be found in Title 10 of the U.S. Code.

The Air National Guard provides almost half of the Air Force's tactical airlift support, combat communications functions, aeromedical evacuations and aerial refueling. In addition, the Air National Guard has total responsibility for air defense of the entire United States.

#### State Mission

When Air National Guard units are not mobilized or under federal control, they report to the governor of their respective state, territory (Puerto Rico, Guarn, Virgin Islands) or the commanding general of the District of Columbia National Guard. Each of the 54 National Guard organizations is supervised by the adjutant general of the state or territory. Under state law, the Air National Guard provides protection of life, property and preserves peace, order and public safety. These missions are accomplished through emergency relief support during natural disasters such as floods, earthquakes and forest fires; search and rescue operations; support to civil defense authorities, maintenance of vital public services and counterdrug operations.

#### Force Structure

The primary sources of full-time support for Air National Guard units are the dual-status military technician and guardsmen on active duty. These people perform day-to-day management, administration and maintenance. By law, dual-status military technicians are civil service

http://www.af.mil/information/factsheets/factsheet\_print.asp?fsID=160&page=1

employees of the federal government who must be military members of the unit that employs them. Technicians train with the unit and are mobilized with it when it's activated. Active-duty members serve under the command authority of their respective state or territorial governors until mobilized for federal duty. The Air National Guard has more than 106,000 officers and enlisted people who serve in 88 flying units and 579 mission support units.

The National Guard Bureau, both a staff and operating agency, administers the federal functions of the Army and the Air National Guard. As a staff agency, the National Guard Bureau participates with the Army and Air staffs in developing and coordinating programs that directly affect the National Guard. As an operating agency, the National Guard Bureau formulates and administers the programs for training, development and maintenance of the Army National Guard and Air National Guard and acts as the channel of communication between the Army, Air Force and the 54 states and territories where National Guard units are located.

#### Personnel and Resources

The authorized strength for the Air National Guard for the current fiscal year is 106,678 compared to active force strength of 359,300. The operating budget for this fiscal year is \$2,724.5 million for personnel, \$4, 724.1 million for operation and maintenance and \$165.3 million for military construction for a total of \$7, 613.9 million.

#### Flying Units/Functions and Capabilities

Besides maintaining 94 percent of the U.S. alert sites for air defense, the Air National Guard provided 60 percent of intercept sorties flown in fiscal 2005 to protect U.S. air sovereignty while still performing many other Air Force-related roles and missions.

The Air National Guard provides tactical airlift, air refueling tankers, general purpose fighters, rescue and recovery capabilities, tactical air support, weather flights, strategic airlift, special operations capabilities and aeromedical evacuation units

Airlift squadrons fly C-130 Hercules, C-5 Galaxy, and C-17 Globemaster aircraft that transport people, equipment and supplies. Air refueling units, flying KC-135 Stratotankers, provide air-to-air refueling for strategic and tactical aircraft.

The Air National Guard has three rescue and recovery squadrons that fly HH-60 helicopters and HC-130 aircraft. These units provide important lifesaving capabilities and services to civilian and military agencies. Air support units that fly OA-10 Thunderbolt IIs provide forward air control support of close-air support missions. The general-purpose fighter force is equipped with F-15 Eagle, F-16 Fighting Falcon, A-10 and OA-10 aircraft.

#### **Support Unit Functions and Capabilities**

Support units are essential to the Air Force mission. In the Air National Guard they include air traffic control units, combat communications squadrons, civil engineering and communication flights and squadrons. Support units also include weather flights, aircraft control and warning squadrons, a range control squadron and an electronic security unit.

Air National Guard weather flights provide weather support to Air Force and Army National Guard and Army Reserve divisions and brigades. During mobilization or federal call up, weather flight units are under the Air Combat Command, except for one, which falls under the Pacific Air Forces.

Civil engineering squadrons provide engineer and firefighter forces trained and equipped to deploy on short notice. Other civil engineering squadrons provide self-sufficient, deployable civil engineering teams to perform heavy repair and maintenance on air bases and remote sites.

Aerial port units provide trained people to support Air Mobility Command's two major theater

http://www.af.mil/information/factsheets/factsheet\_print.asp?fsID=160&page=1

#### AF.mil - Fact Sheet (Printable): AIR NATIONAL GUARD

Page 3 of 3

war commitments. They deploy to 20 active-duty aerial port locations worldwide for annual tour training.

Medical units located with parent flying organizations provide day-to-day health care for flying and non-flying people during their two-week annual training period or during monthly two-day unit training assemblies.

#### FF3. ALASKA AIR NATIONAL GUARD FACT SHEET

Alaska Air National Guard Page 1 of 3

### Alaska Air National Guard

The Alaska Air National Guard was organized in September 1952, and designated as the 8144th Air Base Squadron. On 15 September 1952 at the First Unit Training Assemblys 5 Officers, and 11 Enlisted man answered the roll call. To these men much of the work of organization and the future of the Air Guard in Alaska rested.

The guiding force behind the Organization was Colonel Lars Johnson, the Territorial Adjutant General, later the State Director of Aviation. All his spare time was spent in recruiting personnel, locating equipeent and quarters for the squadron.

The unit was housed at Elmendorf AFB near Anchorage and the job of recruiting technicians, specialists and flying personnel began.

By February 1953 the Unit's first Aircraft arrived, a T-6G Trainer, and unit training began in earnest.

On 1 July 1953 Federal recognition was granted and the Squadron was re-designated the 144th Fighter Bomber Squadron with the promise of F-W Jets. By this time few more T-6 Trainers were on the ramp and the flying schedules were increased to get everyone current for transitional training into jet aircraft. In Nmaber 1953 a T-33A arrived followd by F80C Jet Flahters

Field Training was scheduled for November 1953 with 15 Officers and 49 Enlisted men, and transition training began in earnest to qualify all pilots as jet qualified By November 1954, asigned aircraft'amebered 14 F-80080 2 T-33At, 3 T-6G, 2 T-6D and 1 C-47.

The unit was not expected to expand rapidly, as the 144th Squadron was the first squadron to be federally recognized without a population area of at least a 100,9000. But Alaska being a country where everybody flys, rose to the challenge and by 1954 had grown to 23 Officers and 126 Airmen.

With the unit's growth, the facilites assigned the Squadron at Elmendorf became much too small and the search for larger quarters ended when the National Guard Bureau authorized construction of new quarters at International Airport.

With the completion of facilities at International Airport in February 1955, and the announcement of conversion to F86 Fighters, the Squadron moved to its new quarters with much espre do corps and anticipation.

On 1 July 1955, v the 144th Fighter Bomber Squadron was redesignated the 144th Fighter Interceptor Squadron and had received nine of its now F86 Jets, and had transferred eight of its F-80C's to the Wyoming ANG, Fifteed F-.86's was the final compliment of the Squadron and intercepter training and joint excercisies with the Alaskan Air Command were begun and completed in record time.

The mission was day intercept, and training intensified with many intercepts of SAC Aircraft. Training was continued until the Spring of 1957, when the Squadron was notified that it would becom an Air Transport Unit. Many long faces were noticed during this period of time, however, with the struggle to got organization, training, and all the things that go with

http://www.ngef.org/tier.asp?bid=71&RootPageID=8&AllowChildPageList=False&Conte... 9/22/2010

Alaska Air National Guard

Page 2 of 3

such units, the Squadron had learned some valuable lessons and was determined to make the best of what was thought of as a bad thing.

On July 1, 1957 the Squadron was redesignated as the 144th Air Transport Squadron Light and assigned six C-47's as Transport Aircraft. The old Gooney Bird was a familiar sight around Alaska, and the Squadron realizing that they would have to prove capable of the assignment., hastened to assist the ACC, Army and other agencies with the problems of resupplying outposts of defense.

Iraining was the mission; and the mission was to transport supplies, man and equipment. This was accomplished and awe and it was soon apparent that this was the mission for the Alaska Air National Guard. Any mission was acceptable to the 144th, and sow they Were flying moose calves for the Federal Wildlife People to restock barren areas, hauling mon and sqaipamt for the BLK to fight fires. Paradraps were made to firefighters. resupplying remote early warning sights for the AAC, and the Army called on no to support combat Patrols and paratroop drops.

By the spring of 1960s, the Air Guard was chafing at the bit for larger aircraft, and in May 1960 the National Guard Bureau announced that we had been assigned ten C-123J Cargo Aircraft.

On I July 1960 the Squadron was redesignated the 144th Air Transport Squadron Medium, and transitional training began. By the end of the summer transission had been completed and an expanded mission developed with the Alaskan Air Command.

From 1 July 1960 to the present some of the world's most Interesting flying assignments have been given to the 144th Air Transport Squadron, and also some of the most difficult.

The phrase you hear in Alaska "You are not a pilot until you have flown in Alanka" is a truism that mist be analyzed by the individual concerned, but consider these missions accomplished by the Air Guard in Alaska:

Support of Flethcers "Ice Island" T-3 some 400 miles out in the Avatic ocean

Support of geological research of Taku Glacier

Landings and takeoff from the Glacier with supplies and personnel from the Arctic Research Lab and University of Michigan

Rescue of 15 downed scientists from the Arctic Ocean, whose aircraft was downed and time was of the essence Countless trips to remote sites all over Alaska from Point Barrow to Barter Island, Fort Yukon to Whitehorse, Yukon Territory; Sitka, Ketchiken, Juneau to Cordova, Anchorage to Kodiak, Points on the Aleutian Chain to Cape Newnham, Nunivak Island to St. Lawrence Island, Wales to Point Hope, Cape Lisburne to Wainrights Kozebue to Nome, Bethel to Fairbanks, Points all along the Tukon River and to countless other places

Transportation of Buffalos, Raindeer, Moose and Caribou from one area heavay stocked to other areas barren for the Wildlife People is no longer an oddity

Landings and takeoffs from remote unnamed lakes in support of Army manuvers, paradrope on resupply missions to isolated communities is now commonplace with the

http://www.ngef.org/tier.asp?bid=71&RootPageID=8&AllowChildPageList=False&Conte... 9/22/2010

Alaska Air National Guard

Page 3 of 3

#### Alaska Air Guard.

The Corps of Engineers required our help in hwiling core drilling mehines into the Rampart Dam area on the Yukon River.

We have performed search and resew missions all over the interior and coastal areas in search of downd fliers.

Military manuvers such as Dimond Lil, Great Bear, Timber Line, Polar Seige, Polar Strike, require day and night paradrop missions. Cargo and troop airlifts, landings on remote and mountainous terrain in some of the world's roughest weather, extreme zero temperatures, ice fog, and snow covered lakes and rivers are just a few of the difficulties we face. We also perform resupply missions to both the friendly and enemy forces. As an example of this type of flying, during "Operation Polar Seigs," the following items are worth mentioning: 382 sorties scheduled, 650 hours flown, 2,9375 Passengers airliftedd, 417.3 cargo tons airlifted, incommission rate – .83%, which consisted of 6 aborts, 3 weather and 3 maintenance.

Each year during natural disaster such as floods and fires, the Air Guard participates to the extent required. Flying In demolition teams to bust open ice jams, flying In equipment and personnel to forest fires are some of the jobs we do.

The "Big Shake" of 1964 exemplifies the spirit of the Alaska ANG. Thirty minutes after the auake 2 aircraft were ready with crews. Within two hours four aircraft with crews were standing by and crews were available for six aircraft fair hours after the quake. Air Guardsmen came without call, knowing they would be needed. They took care of emergency Base requirements, readied emergency shelter for 100 people, volunteered aid to civil defense and disaster office, and were the first aircraft into Seward, Valdez, Kodiak and Cordova with emergency supplies, personnel, and news of other areas. For 60 days after the quake, air guard crews flew constantly, resupplying other committies hard hit by the quake. Countless volunteer hours were spent by the Air Guard in assistance to the commmities needing aid. In all this confusion Easter Sunday stands out as does the Unit, the Alaska Air Guard. With some 40 kids staying in the Air Guard emerganey shelter, it, looked pretty bleak for the Easter Bunny to visit the kids. Undaunted, the Air Guardsmen rushed to the community department stores telling of the plights, and were loaded down with goodies for the kids. Staying up most of the evening, they boiled and colored eggs and hid the goodies, with names yet, for the kids peacefully sleeping in the warehouse. The shouts of joy almost set off another earthquake as the kids found out that the Easter Bunny could find them wherever they were.

The Alaska Air National Guard stands ready to accomplish any assignment anywhere, anytime.

#### FF4. 11TH AIR FORCE FACT SHEET

Pacific Air Forces - Fact Sheet (Printable): 11TH AIR FORCE

Page 1 of 2

## **FACT SHEET**

## U.S. Air Force Fact Sheet 11TH AIR FORCE

The Eleventh Air Force plans, conducts, controls and coordinates air operations in accordance with the tasks assigned by the commander, Pacific Air Forces, and is the force provider for Alaskan Command, the Alaskan North American Aerospace Defense Command Region (ANR) and other unified commanders. This mission is accomplished largely through the 611th Air Operations Group and 611th Air Support Group. Together, they provide a network of critical air surveillance and command, control and communications functions necessary to perform tactical warning and attack assessment in defense of Alaska.

**The 611th Air Operations Group** consists of five squadrons and two numbered flights that develop plans, procedures and directives for the employment of Alaskan combat and support forces assigned to Eleventh Air Force, PACAF, and NORAD. They maintain air sovereignty and conduct air defense operations for the Alaskan NORAD Region (ANR). Additionally, they direct rescue operations and provide tactical support for air and land forces.

**The 11th Operational Weather Squadron** provides mission tailored, operational, and tactical level meteorological, geological, oceanographic, and space environment products and services for DoD air and land operations in the Alaskan region. They provide headquarters staff support to the Alaskan Command, 11 AF, PACAF, and US Army Alaska, and contingency support to the Alaskan NORAD Region. They make initial skills course graduates into competent forecasters.

**The 611th Air Control Squadron** has overall responsibility for the Alaskan Air Defense Sector (AADS). The AADS acts as the nerve center and central data collection point for a network of Air Force and Federal Aviation Administration radar sites covering over 1.3 million square miles of airspace throughout Alaska. Additionally, the AADS receives and processes missile attack warning cueing. Its primary mission is to support ANR with around-the-clock surveillance and intercept data for alert and air defense missions.

The 611th Air Operations Squadron provides the core staff of the 11 AF Air Operations Center supporting NORAD and PACAF. They provide sole regional expertise for the command and control system that supports air sovereignty and air defense missions. The squadron develops supporting deliberate plans and is responsible for maintaining operational expertise in space and specific aircraft operations and provides requirements planning for Alaskan air-to-ground weapons ranges and military training airspace. The unit provides liaison with the FAA, validates Operational Support Airlift and manages 23 remote-Alaska airfields.

The 611th Air Intelligence Squadron provides all source intelligence to support Eleventh Air Force combat forces and joint and combined air campaign planning and execution. The squadron produces timely and operationally tailored all-source global threat warning, target development, and combat assessment supporting PACAF and NORAD theater plans and force employment.

The 3rd Air Support Operations Squadron, located at Fort Wainwright, provides close air support and combat weather support for the 172d Infantry Brigade (Separate), the Army's largest light infantry brigade. Arctic tough, Tactical Air Control Parties (TACPs) and Combat Weather Teams (CWTs), along with their associated tactical vehicles and communications equipment, maintain worldwide mission readiness to support Army and JCS contingency operations. Together, they integrate airpower, critical to the success of the land battle.

http://www.pacaf.af.mil/library/factsheets/factsheet\_print.asp?fsID=3605&page=1

Pacific Air Forces - Fact Sheet (Printable): 11TH AIR FORCE

Page 2 of 2

**The 611th Air Communications Flight** provides technical integration of new equipment in the Alaskan Air Defense Sector, integration of Theater Battle Management systems that support Eleventh Air Force and the wings, local area network support for the staff, and system administration of the Atmospheric Early Warning and Theater Battle Management systems in support of the ANR Air Operations Center.

The 611th Alaskan NORAD Flight serves as the focal point for all matters related to the operation, planning, and execution of the Alaskan NORAD Region mission. They are responsible for the development of deliberate plans for employment of 11 AF and augmenting units in support of CINCNORAD. As the lead trainer for ANR, they conduct multi-command exercises for ANR's peacetime and wartime missions and train ANR battle staff in the execution of NORAD combat operations. The 611 ANF oversees and manages the interoperability and upgrade of command and control and surveillance systems and leads ANR Force Protection.

**The 611th Air Support Group** consists of two squadrons and two flights and provides surveillance radars, arctic infrastructure including airfields, communications, and worldwide ready EAF warriors for homeland defense, decisive force projection, and aerospace command and control in Alaska.

**The 611th Air Support Squadron** manages three operations and maintenance (O&M) contracts, valued at \$64M annually, at 1 air station, 2 forward operating bases, and 18 remote radar sites. Provides/directs quality assurance for logistics, force protections, services, communications, and facility engineering efforts at 21 remote locations. Supports 11 AF logistics planning and contingency operations. Manages \$8M of leased communications systems.

**The 611th Civil Engineer Squadron** provides civil engineer functions at Eareckson AS, forward operating bases at Galena and King Salmon Airports, 18 operational radar and 21 inactive sites throughout remote Alaska. The squadron assures environmental compliance within 59,000 square miles of military operations air space and provides, as a command resource, specialized capability in aircraft hangar door maintenance and repair; asbestos and lead abatement; depot overhaul and certification of emergency power engine-generator sets and aircraft arresting systems; construction of Super K-Span facilities; and crane and hoists repair and certification.

**The Missile Defense Flight or Command Representative for Missile Defense** serves as the focal point for all issues related to Ground-based Midcourse Defense in Alaska, in support of Alaska Command, Alaska NORAD Region, and 11 AF.

The 11 AF/Alaska NORAD Region (ANR) Logistics Flight provides a core group of logisticians to support Air Force and NORAD air operations throughout the theater, including manning the ANR Battlestaff and establishing logistics readiness centers when necessary.

Timlin, 1 Aug 1962; Col Charles S. Overstreet Jr., 3 Sep 1963-8 Jan 1964 (additional duty); unkn, 9 Jan-18 Feb 1964; Col Philip Brooks, 19 Feb 1964; Col Waring W. Wilson, 28 May 1965; Col Robert A. Ackerly, 19 Jul 1965; Col Richard C. Catledge, 1 Nov 1966; Col George W. McLaughlin, 30 Sep 1967; Col Homer K. Hansen, 5 May 1968; Col Howard M. Lane, 1 Apr 1969; Col William E. Charlson, 11 Apr-31 Oct 1970; none (not manned), 1 Nov 1970-14 Mar 1971; Col Abner M. Aust Jr., 15 Mar 1971; Col Charles A. Watry, 17 Nov 1971; Col Paul A. Kauttu, 5 Oct 1972; Col Harry W. Schurr, 19 Nov 1973; Col George L. Schulstad, 16 Sep 1974; Col Lacy W. Breckenridge, 14 Mar 1975; Col Alfred M. Miller Jr., 25 Mar 1975; Col James R. Brown, 13 Oct 1976; Col Thomas S. Swalm, 1 Aug 1978; Col Martin H. Mahrt, 20 Feb 1979; Col Thomas G. McInerney, 31 Mar 1979; Brig Gen John A. Corder, 6 Feb 1981; Col Willard R. MacFarlane, 5 Aug 1983; Col Charles F. Luigs, 25 May 1985; Col Ronald W. Iverson, 27 Mar 1986; Col Frank D. Garza, 25 Feb 1988; Col Jeffrey R. Grime, 26 Jan 1990; Col Bruce M. Freeman, 7 Aug 1991; Col Rodney P. Kelly, 19 Dec 1991; Brig Gen Thomas R. Case, 23 Jul 1993; Brig Gen Hugh C. Cameron, 27 Mar 1995; Brig Gen William J. Lake, 4 Nov 1996; Brig Gen Jonathon S. Gration, 8 Jun 1998; Col Douglas M. Fraser, 20 Jan 2000; Brig Gen Robertus Remkes, 5 Apr 2002; Brig Gen Michael A. Snodgrass, 26 Jan 2004; Brig Gen Herbert H. Carlisle, 20 May 2005-

**Aircraft**. B-26, 1948-1950, 1950-1956; F-15 (modified P-61), 1949; RF-80, 1949-1950; C-47, 1951; B-57, 1956-1963; RB-50, 1960-1961; KB-50, 1960-1962; C-130, 1961-1962; F-102, 1961-1962; F-100, 1964-1970; F-5, 1965-1967; A-1, 1965-1966; U-10, 1965-1966; C/AC/HC-47, 1965-1966; A-37, 1967-1970; F-4, 1971-1974, 1974-1991; T-33, 1974-1987; C-9, 1974-1975; CH-3, 1974-1975; T-38, 1976-1980; F-5, 1977-1988; MC-130, 1980-1983; UH-1, 1991; F-15, 1991-; C-12, 1992-; C-130, 1992-; E-3, 1993-.

**Operations**. Trained as a bombardment and reconnaissance wing prior to Korean War. Performed reconnaissance and interdiction combat missions from lwakuni AB, Japan, at the beginning of the Korean War, 1-19 Jul 1950. From 20 Jul to 1 Dec 1950 the tactical group and its squadrons served under operational control of another organization. The wing assumed a supporting role, initially from Johnson AB, Japan, but later from Yokota AB, Japan. The Wing returned to Iwakuni AB on 1 Dec 1950, regained control of its combat units and performed night intruder combat missions. Moved to South Korea in Aug 1951 and interdicted main supply routes in western North Korea for the remainder of the war. After the Korean War, the wing participated successively in bombardment, air defense, reconnaissance, and air refueling training. Its headquarters was non-operational 1 Sep 1963 to 8 Jan 1964. Moved to the United States without personnel or equipment in Jan 1964, then trained and rotated its squadrons in

Page 3 of 4

detached status to Southeast Asia for combat duty. Moved in Nov 1965 to Bien Hoa AB, South Vietnam, a forward operating base, which frequently came under enemy mortar and rocket fire. Missions included close air support, counterinsurgency, forward air control, interdiction, and radar-controlled bombing. Supported numerous ground operations with strike missions against enemy fortifications, supply areas, lines of communication and personnel, in addition to suppressing fire in landing areas. During this time, wing also participated in combat evaluation of F-5 and A-37 aircraft. Unmanned and unequipped on 31 Oct 1970, the wing remained active in a "paper" status until it moved to South Korea on 15 Mar 1971, to be manned and equipped with F-4 aircraft. In Sep 1974, moved without personnel or equipment to Clark AB, Philippines, replacing the 405 Fighter Wing. Participated in frequent operational exercises and evaluations. Between 5 Apr and 31 May 1975, wing used its facilities as a staging area for Operations Baby Lift (evacuation of Vietnamese orphans from South Vietnam to the United States) and New Life (evacuation of Vietnamese adults to the United States for resettlement). Performed fighter aggressor training operations using T-38 and later F-5E aircraft from 1976 to 1988; deployed throughout Pacific Air Forces to provide dissimilar aircraft combat training to US and allied fighter units. Deployed aircraft from the Philippines to Korea annually to participate in multinational joint-service combined forces exercises, 1978-1991. With addition of the F-4G "Wild Weasel" aircraft in 1979, the wing acquired dual role capabilities of air-to-air/air-to-ground and defense suppression/electronic countermeasures. Assignment of the 1 Special Operations Squadron, equipped with MC-130 aircraft, provided the wing with an unconventional warfare capability, Jan 1981-Mar 1983. Operated UH-1N helicopters, 1988-1991, for drone recovery, VIP airlift, range support, Philippine air defense site support, and medical evacuation. At the end of May 1991, the last F-4 aircraft departed the wing, shortly before the eruption of Mount Pinatubo in Jun 1991. Wing was not operational from Jun 1991 until it moved on paper to Elmendorf AFB on 19 Dec 1991, replacing the 21 Tactical Fighter Wing. Expanded the air defense mission of Alaska with the F-15E aircraft to include deep interdiction and air-to-air capabilities. Added an airlift mission in Apr 1992, and a long-range airborne surveillance, detection, identification, and command and control mission in 1993. Since 1993, deployed and employed assigned aircraft worldwide to accomplish air superiority, air interdiction, tactical airlift, airborne air surveillance, theater resupply, passenger service and served as host unit for all Elmemdorf AFB organizations. During 2004, fulfilled Air Expeditionary Force (AEF) taskings in support of Operations Enduring Freedom and Iraqi Freedom.

#### Service Streamers. None.

Campaign Streamers. Korea: UN Defensive; CCF Intervention; First UN Counteroffensive; CCF Spring Offensive; UN Summer-Fall Offensive; Second Korean Winter; Korea Summer-Fall, 1952; Third Korean Winter; Korea Summer, 1953. Vietnam: Vietnam Defensive; Vietnam Air; Vietnam Air Offensive; Vietnam Air Offensive, Phase II; Vietnam Air/Ground; Vietnam Air Offensive, Phase IV; TET 69/Counteroffensive; Vietnam Summer-Fall, 1969; Vietnam Winter-Spring, 1970; Sanctuary Counteroffensive; Southwest Monsoon. Southwest Asia: Defense of Saudi Arabia; Liberation and Defense of Kuwait.

#### Armed Forces Expeditionary Streamers. None.

**Decorations.** Presidential Unit Citations (Vietnam): 8 Jun 1966-16 Apr 1967; 6 Mar 1968-31 Jul 1969. Air Force Outstanding Unit Awards with Combat "V" Device: 31 Jan-5 Mar 1968; 1 Aug 1969-20 Jan 1970; 21 Jan-31 Oct 1970. Air Force Outstanding Unit Awards: 1 Jun 1958-30 Jun 1960; 1 Jul 1960-31 Mar 1962; 1 May 1964-16 Jul 1965; 1 Jul 1972-31 Dec 1973; 1 May 1980-30 Apr 1982; 22 Mar-1 Apr 1986; 1 Jan 1989-1 Jun 1990; 1 Jan 1994-31 Dec 1995; 1 Jan 1996-30 Sep 1998; 1 Jan 2000-31 Dec 2001; 1 Jan 2002-30 Sep 2003; 1 Oct 2003-30 Sep 2005. Republic of Korea Presidential Unit Citation: 27 Jun-31 Jul 1950. Republic of Vietnam Gallantry Crosses with Palm: 25 Nov 1965-19 May 1969; 1 Apr 1966-31 Oct 1970; 1 May-30 Sep 1970.

**Bestowed Honors**. Authorized to display honors earned by the 3 Operations Group prior to 18 Aug 1948. **Service Streamers**. None. **Campaign Streamers**. World War II: Antisubmarine, American Theater; East Indies; Air Offensive, Japan; Papua; New Guinea; Bismarck Archipelago; Western Pacific; Leyte; Luzon; Southern Philippines. **Decorations**. #### FF6. 176TH WING FACT SHEET

176th Wing, Alaska Air National Guard - Fact Sheet (Printable): 176TH WING

Page 1 of 3

## **FACT SHEET**

#### U.S. Air Force Fact Sheet 176TH WING

The Alaska Air National Guard got its start on Sept. 15, 1952, when the federal government authorized and recognized the 8144th Air Base Squadron. At its creation, the 8144th included 11 enlisted men, five officers and no planes. Its headquarters were located in a small office above what was then the bus depot on Fourth Avenue in downtown Anchorage. Because the office was so small, the men convened for their first UTA in a nearby Quonset hut.

Their first aircraft, a T-6G "Texan" trainer, arrived in February 1953. Soon, five more trainers arrived, operating out of Elmendorf. In keeping with the Air Guard's mission to provide national air defense, the pilots began training in earnest for their planned transition to jet fighters. As that training progressed, the unit was re-designated the 144th Fighter-Bomber Squadron in July 1953.

The first jet, a T-33A trainer, arrived in October, shortly followed by F-80C "Shooting Star" jet fighters. By late Fall of 1954, the growing unit was fully equipped with 14 F-80s, two T-33s, three T-6G trainers, two T-6 observation planes and a C-47A "Gooney Bird" transport.

In spring of 1955, the Alaska Air National Guard moved out of Elmendorf and onto its new base near Anchorage International Airport. After an informal vote, the base was dedicated in honor of 1st Lt. Albert Kulis, a pilot who was killed in his F-80 in November of 1954.

While other Air Guard units around the country were receiving surplus aircraft, the 144th's F-80s were exchanged for new, top-of-the-line F-86 "Sabre" fighter jets in 1955. Along with new aircraft came the unit's third designation in as many years, this time the 144th Fighter Interceptor Squadron.

That designation also proved short-lived. A decision was made at the national level to shift the Air Guard's emphasis from air combat to airlift, and the newly rechristened 144th Transportation Squadron (Light) turned in its Sabres for C-47 "Gooney Birds" in 1957.

Just a few years later, the new decade brought with it a new set of wings. The Alaska Air National Guard's tough but aging C-47s were replaced by larger C-123J "Provider" tactical airlift transports. With the new aircraft, the 144th Air Transportation Squadron's "light" designation was upgraded to "medium."

It started to become obvious that the Alaska Air National Guard was outgrowing its single-squadron status. Laying the groundwork for future expansion, the organization was officially designated the 176th Tactical Airlift Group in 1969. The Group retained the 144th Tactical Airlift Squadron as its flying unit. By the end of 1970, four squadrons had been organized to perform the flight operations, maintenance, supply and support functions. Along with the tactical dispensary, a communications flight and a civil engineering unit were added to give the Group the "total react capability" enjoyed by Guard units in the other 49 states. The 176th's focus on tactical airlift missions would not change, however. In fact, it was to be expanded, and the Group was authorized another 475 positions on top of its 275 existing slots.

Another obvious sign of progress was the increasing extent to which the Alaska Air National Guard was integrating its operations with the U.S. Air Force and other Air National Guard units. In the Fall of 1971, Kulis hosted three "Prime BEEF" (Base Emergency Engineering Force) Air Guard teams from Colorado, Iowa and Nevada.

http://www.176wg.ang.af.mil/resources/factsheets/factsheet\_print.asp?fsID=11895&page=1 9/22/2010

176th Wing, Alaska Air National Guard - Fact Sheet (Printable): 176TH WING

Page 2 of 3

Over the next two years, the 176th Civil Engineer Flight sent its own Prime BEEF team to Arizona, Nevada and Korea.

Even as America began to suffer through the post-Vietnam era, the Alaska Air National Guard continued to enjoy political and public support. In 1974 Kulis added a new Operations Center and a multipurpose building, and recruiting levels began to increase steadily.

The 144th Tactical Airlift Squadron's mission was changed to worldwide airlift in 1976, and it was assigned to the Military Airlift Command as the "gaining" command in the event it was federalized for active duty. A mechanical upgrade was in order, and after 16 years of service the unit's C-123s were replaced with C-130E "Hercules" transports, boasting increased speed, range and carrying capacity.

By this time, the increasing integration between active duty and reserve-component military forces had progressed the point where the concept had a name of its own: the Total Force.

In short, Total Force stressed a "shared responsibility" among all service components. With its new C-130s, the 176th Group began participating in the Total Force almost immediately, flying to Panama, Germany, Korea and elsewhere to support U.S. military and humanitarian missions.

By the 1980s, it was easy to see that the Alaska Air National Guard had changed immensely from the early days of the 8144th Air Base Squadron. It had not only grown larger but had evolved; gaining experience and taking on more responsibility as it matured. That being the case, it was perhaps no surprise when, at age 34, the organization spun off a new unit of its

The 168th Air Refueling Squadron started life in 1986 as the 176th Tactical Airlift Group's Eielson-based Detachment 1. Its mission was to build a tanker unit from the ground up. In the Spring of 1986, members of the unit -- what few there were -- began a 17-day tour of other Air National Guard tanker units. This trip had a dual purpose, one of its participants would recount later: "One, conduct interviews and make selection for the jobs ... and two, steal people." Evidently they were very persuasive, because the new unit was staffed by 16 officers and 65 enlisted personnel by September, when its first planes, four renovated KC-135 aerial tankers arrived.

Obtained from the Arkansas Air National Guard over vociferous objections from local politicians, the KC-135s were hand-me-downs, and the 168th's other facilities were antiquated. Despite this, the unit still managed to supply 70 percent of the theater's air refueling training needs in its first six months of operation. Only two years after being activated, its first Unit Effectiveness Inspection resulted in a rare "excellent" rating.

For its first four years of existence, the 168th was assigned to the 176th, which was redesignated the 176th Composite Group in recognition of its newly diversified components. By the end of the decade, the 168th had already reached operational maturity. It was redesignated the 168th Air Refueling Group and began operating independently of the 176th.

The 1990s kicked off with a bang, but the groundwork had been laid three years before. In 1987, the Air Force announced that Elmendorf's famed 71st Aerospace Rescue and Recovery Squadron was being deactivated. Sen. Ted Stevens, the senior member of Alaska's congressional delegation, asked Alaska Air National Guard leaders if they were interested in taking over the mission. Interest was high, and the answer to Stevens' query was a resounding 'yes.'

In early 1989 the new unit began hiring its first full-time personnel. From April through June of that year, the maintenance and operations personnel trained on a UH-60A Black Hawk on loan from the National Guard Bureau. On April 4, 1990, the federal government officially recognized the 210th Air Rescue Squadron.

http://www.176wg.ang.af.mil/resources/factsheet\_print.asp?fsID=11895&page=1 9/22/2010

The military mission of the 210th was Combat Search and Rescue -- picking up downed aircrew members during wartime. Beyond that, the 210th had an important peacetime mission: to stand on constant 24-hour alert, ready to rescue military personnel and civilians stranded in Alaska's unpredictable wilderness. The 210th became the first U.S.-based rescue unit to receive the new MH-60G Pave Hawk helicopter when its first one arrived in June 1990. (They would be redesignated HH-60Gs in 1992.) Three others arrived by August.

Organizational work continued, and in November and December the first of the 210th's new HC-130Ns arrived. These airborne tankers were equipped to supply the Pave Hawks with aerial refueling. They were also able to serve as airborne search vehicles and as platforms for pararescue and equipment airdrops. After its first year of operation, the 210th Rescue Squadron was given credit for saving 72 lives and assisting in the rescue of 20 more.

Rescuing Alaskans in need may have been the most visible Alaska Air National Guard activity in the 1990s, but outside the glare of the spotlight the organization was as busy as ever.

In 1994, for example, the last contingent of Alaska Air National Guard members returned home from their second overseas rotation to Kuwait. Two aircraft and aircrews from the 144th also flew numerous sorties in support of Operation Desert Shield/Desert Storm, airlifting cargo and personnel being staged for deployment in the Gulf.

On October 1, 1995, the Alaska Air National Guard's 176th Composite Group became the 176th Wing. The next month, the organization hit the 120,000 accident-free flying hour mark.

Search and rescue missions included everything from nation-building operations assisting injured Afghan nationals after skirmishes between local militias, and picking up Coalition forces wounded during conflicts with the Taliban, to humanitarian undertakings like picking up young children who had stepped on land mines.

In August 2003, more than 150 personnel from the wing deployed to Ramstein Air Base, Germany in support of the 144th Airlift Squadron's contributions to Operation Joint Forge, where they provided airlift and logistical support involving military personnel and cargo in the European Theater. The Operation Joint Forge mission continues to help provide a NATO Stabilization Force in the Bosnia area.

While it was not a normally scheduled rotation, the 144th volunteered to help fill the airlift shortfall created by other worldwide events. This was the first time in the composite wing's history that members served in two major operations in separate areas of the world.

From its humble origins a half-century ago, the 176th Wing has grown into a professional force of more than 1,200 full- and part-time members.

Among the most active Guard organizations in the country, at any given moment its members are at work in the sky and on the ground, protecting American citizens and national interests at home and abroad.

### U.S. Air Force Fact Sheet 517 AIRLIFT SQUADRON (PACAF)

Lineage. Constituted 17 Transport Squadron on 20 Nov 1940. Activated on 11 Dec 1940. Redesignated 17 Troop Carrier Squadron on 4 Jul 1942. Inactivated on 31 Jul 1945. Activated on 19 May 1947. Inactivated on 10 Sep 1948. Redesignated 17 Troop Carrier Squadron, Medium, on 3 Jul 1952. Activated on 14 Jul 1952. Inactivated on 21 Jul 1954. Activated on 24 Oct 1960. Organized on 8 Feb 1961. Redesignated: 17 Troop Carrier Squadron on 8 Dec 1965; 17 Tactical Airlift Squadron on 1 Sep 1967; 517 Airlift Squadron on 1 Apr 1992.

Assignments. 64 Transport (later, 64 Troop Carrier) Group, 11 Dec 1940-31 Jul 1945. 64 Troop Carrier Group, 19 May 1947-10 Sep 1948. 64 Troop Carrier Group, 19 May 1947-10 Sep 1948. 64 Troop Carrier Group, 14 Jul 1952-21 Jul 1954. Tactical Air Command, 24 Oct 1960; 64 Troop Carrier Wing, 8 Feb 1961; 516 Troop Carrier Wing, 1 Jan 1963; 5040 Air Base Wing, 15 Jun 1964; 21 Composite Wing, 8 Jul 1966; Twenty-Second Air Force, 31 Mar 1975; 616 Military Airlitt Group, 1 Nov 1975; 3 Operations Group, 1 Apr 1992-.

Stations. McClellan Field, CA, 11 Jul 1940; Hamilton Field, CA, 11 Jul 1941; Westover Field, MA, 13 Jun-31 Jul 1942; Ramsbury, England, 18 Aug 1942; Greenham Common Airdrome, England, 26 Sep 1942; Blida, Algeria, 27 Nov 1942 (air echelon operated from Nouvion, Algeria, 6-27 Jun 1943 and Kairouan, Tunisia, 27 Jun-26 Jul 1943); Kairouan, Tunisia, 29 Jun 1943; El Djem, Tunisia, 26 Jul 1943; Milo/Trapani Airdrome, Sicily, 1 Sep 1943; Comiso, Sicily, 4 Sep 1943 (air echelon operated from Lalmia, India, 7 Apr-9 Jun 1944); Ciampino, Italy, 8 Jul 1944 (operated from Istres, France, 8 Sep-11 Nov 1944); Rosignano Airfield, Italy, 10 Jan-23 May 1945; Waller Field, Trinidad, 4 Jun-31 Jul 1945. Langley Field, VA, 19 May 1947-10 Sep 1948. Donaldson AFB, SC, 14 Jul 1952-21 Jul 1954. Dyess AFB, TX, 8 Feb 1961; Elmendorf AFB, AK, 15 Jun 1964-.

Commanders. Capt Aaron H. Hoffeditz, 11 Dec 1940; Capt Albert B. Willett, 10 May1941; Maj William S. Pocock, 15 Dec 1941; Maj Earl B. Cook, 16 Mar 1942; Maj John T. Thompson, 13 Oct 1942; Maj LaVerne L. Cheney, 17 May 1943; Maj Leo J. Hagerty, 7 Nov 1944-unkn; Capt William B. Parker, unkn-4 Mar 1945; Maj Leo J. Hagerty, 4 Mar 1945; Capt William B. Parker, 21 Mar 1945-unkn. None (not manned), 19 Sep 1947-10 Sep 1948. Maj Wesly C. Brashear, by Sep 1952; Capt Robert E. Lee, by Oct 1952; Lt Col G. B. Gray, by Dec 1952-unkn. Capt Charles D. Adarns, 8 Feb 1961; Maj Guy E. Ridgeway Jr., 1 Apr 1961; Lt Col Joseph J. Kesler, Oct 1961; Lt Col Guy E. Ridgeway Jr., 25 Apr 1962; Col John H. Statts, 12 Mar 1963; Lt Col Kenneth E. Bethe, 1 Jul 1966-unkn; Lt Col R. T. Tinney, by 1 Sep 1969; Lt Col John C. Parker, 22 Sep 1969; Lt Col Ora J. Baird Jr., by Mar 1971; Lt Col Charles F. Renner, by May 1971; Lt Col Ora J. Baird Jr., by Jun 1971; Lt Col Charles F. Renner, 4 Jun 1971; Lt Col Ora J. Baird Jr., 3 Sep 1971; Lt Col John D. Hedges, 26 Jun 1972; Lt Col Donald R. Gould, 11 Dec 1972; Lt Col

John D. Hedges, by Apr 1973; Lt Col Donald R. Gould, 10 Apr 1973; Lt Col James H. Waldman, 1 Apr 1974; Lt Col William J. Gibbons, 22 Jun 1976; Lt Col Robert T. Shellenberger Jr., 22 Jul 1976; Lt Col David M. Calder, 26 Aug 1978; Lt Col William P. Martin Jr., by 30 Sep 1978; Lt Col Donald L. Smith, 1 Jul 1979; Lt Col Ronald B. Dorcy, 2 Jun 1981; Lt Col James W. Prouty, 4 Jan 1984; Lt Col George N. Williams, 14 Nov 1985; Lt Col Ralph G. Bert II, by Jan 1988; Lt Col Andrew M. Gessner, 6 Jul 1989; Lt Col Richard J. Casey, 29 Jun 1991; Lt Col Douglas L. Miller, 28 Jun 1993; Lt Col William M. Hudson, 20 Jun 1994; Lt Col Walter J. Tomczak, 12 Jul 1996; Lt Col Paul A. Curlett, 2 Jul 1998; Lt Col Neil B. Friedli, 17 Mar 2000; Lt Col Paul Stephenson, 23 Mar 2001; Lt Col Patrick Hollrah, 13 Mar 2003; Lt Col Paul E. Feather, 24 Aug 2004; Lt Col Gary J. Gottschall, 27 Jan 2006-

Aircraft. C-47, 1941-1945. None, 1947-1948. C-82, 1952-1953; C-119, 1953-1954. C-130, 1961-; C-124, 1970-1971; C-12, 1992-.

**Operations.** World War II: Included airborne assaults on Sicily and Southern France; support for partisans in Northern Italy, Jan-May 1945; aerial transportation in MTO, and briefly in CBI. Unmanned, 1947-1948. Resupplied Distant Early Warning (DEW) line sites in Northern Canada and radar sites in Greenland, 1964-1975. Parts of the squadron deployed to South Vietnam, 1967-1968 to provide tactical airlift. Provided intratheater airlift within Alaska including support to forward operating bases; airland/airdrop of troops, equipment and supplies; search and rescue as required. Provided C-130 aircraft and crews for Pacific airlift to Southwest Asia, Aug-Nov 1990. Since 1992, provided worldwide combat airdrop, tactical air/land, operational support airlift, airlift for theater deployed forces and resupply of remote Alaskan long-range radar sites in support of PACAF. Provided continuous rotational airlift and airdrop support for Operations Enduring Freedom and Iraqi Freedom, 2004-. Among first responders to Asian tsunami that occurred on 26 Dec 2004.

Service Streamers. World War II American Theater.

**Campaign Streamers.** World War II: Algeria-French Morocco; Tunisia; Sicily; Naples- Foggia; Rome-Arno; Southern France; North Apennines; Po Valley, India-Burma. Vietnam: Vietnam Air Offensive; Vietnam Air Offensive, Phase II.

#### Armed Forces Expeditionary Streamers. None

**Decorations.** Distinguished Unit Citation: CBI Theater, 7 Apr-15 Jun 1944. Air Force Outstanding Unit Award with Combat "V" Device: 2 May 1967-1 Jan 1968. Air Force Outstanding Unit Awards: 1 Jul 1962-15 Jun 1964; 16 Jun 1964-31 May 1966; 8 Jul 1966-1 May 1967; 2 Jan-31 Dec 1968; 1 Jan-31 Dec 1969; 1 Jan-31 Dec 1970; 1 Jan-31 Dec 1971; 1 Jan-31 Dec 1972; 1 Jan-31 Dec 1974; 1 Jan-30 Mar 1975; 1 Jan-10 Dec 1979; 1 Jun 1986-31 May 1987; 1 Jun 1987-31 May 1989; 1 Jan 1994-31 Dec 1995; 1 Jan 1996-30 Sep 1998; 1 Jan 2000-31 Dec 2001; 1 Jan 2002-30 Sep 2003; 1 Oct 2003-30 Sep 2005. Republic of Vietnam Gallantry Cross with Palm: 1 Sep 1966-1 Jan 1968.

Lineage, Assignments, Stations, and Honors through 29 Sep 2006.

Commanders, Aircraft, and Operations through 29 Sep 2006.

**Supersedes** published information contained in: Judy G. Endicott (ed.)., *Active Air Force Wings* as of 1 October 1995 (Washington:USPGO, 1999).

Emblem. Approved on 29 Mar 1962; modified on 16 Feb 1999.

#### FF9. C-17A GLOBEMASTER III FACT SHEET

AF.mil - Fact Sheet (Printable): C-17 GLOBEMASTER III

Page 1 of 3

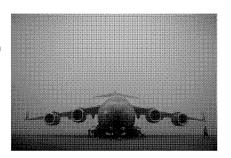

## **FACT SHEET**

## U.S. Air Force Fact Sheet C-17 GLOBEMASTER III

#### Mission

The C-17 Globemaster III is the newest, most flexible cargo aircraft to enter the airlift force. The C-17 is capable of rapid strategic delivery of troops and all types of cargo to main operating bases or directly to forward bases in the deployment area. The aircraft can perform tactical airlift and aircrop missions and can also transport litters and ambulatory patients during aeromedical evacuations when required. The inherent flexibility and performance of the C-17 force improve the ability of the total airlift system to fulfill the worldwide air mobility requirements of the United States.

The ultimate measure of airlift effectiveness is the ability to rapidly project and sustain an

effective combat force close to a potential battle area. Threats to U.S. interests have changed in recent years, and the size and weight of U.S.-mechanized firepower and equipment have grown in response to improved capabilities of potential adversaries. This trend has significantly increased air mobility requirements, particularly in the area of large or heavy outsize cargo. As a result, newer and more flexible airlift aircraft are needed to meet potential armed contingencies, peacekeeping or humanitarian missions worldwide. The C-17 is capable of meeting today's demanding airlift missions.

#### Features

Reliability and maintainability are two outstanding benefits of the C-17 system. Current operational requirements impose demanding reliability and maintainability. These requirements include an aircraft mission completion success probability rate of 92 percent, only 20 aircraft maintenance man-hours per flying hour, and full and partial mission availability rates of 74.7 and 82.5 percent, respectively. The Boeing warranty assures these figures will be met.

The C-17 measures 174 feet long (53 meters) with a wingspan of 169 feet, 10 inches (51.75 meters). The aircraft is powered by four, fully reversible, Federal Aviation Administration-certified F117-PW-100 engines (the military designation for the commercial Pratt & Whitney PW2040), currently used on the Boeing 757. Each engine is rated at 40,440 pounds of thrust. The thrust reversers direct the flow of air upward and forward to avoid ingestion of dust and debris. Maximum use has been made of off-the-shelf and commercial equipment, including Air Force-standardized avionics.

The aircraft is operated by a crew of three (pilot, copilot and loadmaster), reducing manpower requirements, risk exposure and long-term operating costs. Cargo is loaded onto the C-17 through a large aft door that accommodates military vehicles and palletized cargo. The C-17 can carry virtually all of the Army's air-transportable equipment.

Maximum payload capacity of the C-17 is 170,900 pounds (77,519 kilograms), and its maximum gross takeoff weight is 585,000 pounds (265,352 kilograms). With a payload of 169,000 pounds

AF.mil - Fact Sheet (Printable): C-17 GLOBEMASTER III

Page 2 of 3

(76,657 kilograms) and an initial cruise altitude of 28,000 feet (8,534 meters), the C-17 has an unrefueled range of approximately 2,400 nautical miles. Its cruise speed is approximately 450 knots (.76 Mach). The C-17 is designed to airdrop 102 paratroopers and equipment.

The design of the aircraft allows it to operate through small, austere airfields. The C-17 can take off and land on runways as short as 3,500 feet (1,064 meters) and only 90 feet wide (27.4 meters). Even on such narrow runways, the C-17 can turn around using a three-point star turn and its backing capability.

#### Background

The C-17 made its maiden flight on Sept. 15, 1991, and the first production model was delivered to Charleston Air Force Base, S.C., June 14, 1993. The first squadron of C-17s, the 17th Airlift Squadron, was declared operationally ready Jan. 17, 1995. The Air Force originally programmed to buy a total of 120 C-17s, with the last one being delivered in November 2004. Current budget plans involve purchasing 205 aircraft.

The original 120 C-17s were based at Charleston AFB; McChord AFB, Wash., (first aircraft arrived in July 1999); Altus AFB, Okla.; and at an Air National Guard unit in Jackson, Miss. In August 2005, March Air Reserve Base, Calif., began basing the first of eight aircraft. In February 2006, Hickam AFB, Hawaii, received its first C-17.

The C-17 is operated by the Air Mobility Command at the 60th Airlift Wing and the 349th Air Mobility Wing (Associate Reserve) at Travis AFB, Calif.; 436th AW and 512th AW (Associate Reserve) at Dover AFB, Del.; 62nd AW and 446th AW (Associate Reserve) at McChord AFB, Wash.; 437th Airlift Wing and 315th AW (Associate Reserve) at Charleston AFB, S.C.; the 305th AMW, McGuire AFB, N.J.; and the 172nd AW, Mississippi ANG. Additionally, Air Force Materiel Command operates two C-17s at Edwards AFB, Calif., and Pacific Air Forces operates eight aircraft each at Elmendorf AFB, Alaska and Hickam AFB, Hawaii (Associate Guard). The Air Force Reserve Command operates eight aircraft at March Air Reserve Base, Calif; and Air Education and Training Command has 12 aircraft at Altus AFB, Okla.

#### **General Characteristics**

Primary Function: Cargo and troop transport

Prime Contractor: Boeing Company

Power Plant: Four Pratt & Whitney F117-PW-100 turbofan engines

Thrust: 40,440 pounds, each engine

Wingspan: 169 feet 10 inches (to winglet tips) (51.75 meters)

Length: 174 feet (53 meters)

Height: 55 feet 1 inch (16.79 meters)

Cargo Compartment: length, 88 feet (26.82 meters); width, 18 feet (5.48 meters); height, 12

feet 4 inches (3.76 meters)

Speed: 450 knots at 28,000 feet (8,534 meters) (Mach. 76) Service Ceiling: 45,000 feet at cruising speed (13,716 meters)

Range: Global with in-flight refueling Crew: Three (two pilots and one loadmaster)

Aeromedical Evacuation Crew: A basic crew of five (two flight nurses and three medical technicians) is added for aeromedical evacuation missions. Medical crew may be altered as required by the needs of patients

Maximum Peacetime Takeoff Weight: 585,000 pounds (265,352 kilograms)

Load: 102 troops/paratroops; 36 litter and 54 ambulatory patients and attendants; 170,900

pounds (77,519 kilograms) of cargo (18 pallet positions)

Unit Cost: Unit Cost: \$202.3 million (fiscal 1998 constant dollars)

Date Deployed: June 1993

Inventory: Active duty, 158; Air National Guard, 8; Air Force Reserve, 8

#### Point of Contact

Air Mobility Command, Public Affairs Office; 503 Ward Drive Ste 214, Scott AFB, IL 62225-5335, DSN 779-7843 or 618-229-7843.
