## H1. EGRESS ANALYSIS

There was no egress attempted on this mishap and no egress analysis conducted.

#### **H2.** IMPACT ANALYSIS

At 02:23:16 zulu, on 28 July 2010, the MA impacted the ground 2nm northeast of runway 06 at Elmendorf AFB. Confirmed by high-definition video footage and the flight data recorder (FDR), the MA was in an approximate 60 degree right angle of bank, 17 degree nose low attitude when it impacted the ground. The engines were at maximum power. The airspeed at impact cannot be determined, however, the last recorded airspeed on the FDR was 175 KIAS. The center point of the mishap impacted north-south running railroad tracks with the right wing impacting the west side of the tracks and the left wing and the fuselage impacting the east side. Upon impact an explosion occurred with an ensuring fire that burnt for approximately 36 hours. The MA was completely destroyed and additional impact analysis was not conducted.

## H3. AIRFRAME CRASHWORTHINESS ANALYSIS

There was no airframe crashworthiness analysis conducted on this mishap.

# H4. LIFE SUPPORT ANALYSIS

There was no life support analysis conducted on this mishap.

#### J1. BOEING TECHNICAL EXPERT ANALYSIS OF SFDR DATA

Technical report – The Boeing Company

Mishap System: C-17A, Serial Number 00-0173

Mishap Date: 28 July 2010

Investigator: , C-17 Air Safety Investigator,

BDS Air Safety Investigator,

Introduction: Factual Report to support the safety investigation into the mishap of aircraft 00-

0173 on 28 July 2010. The information in this report does not contain any Boeing proprietary information and may be used in the Part I of the Safety

Investigation Board report.

**Background:** Boeing was asked by the Air Force Safety Center to provide engineering, technical, and supply support to the Safety Investigation Board (SIB) investigating this mishap. Boeing provided the following support:

Air Safety Investigator: Boeing sent two Air Safety Investigators (ASI) to support the board. One was the Boeing C-17 ASI from Long Beach, California. The other was an Air Safety Investigator from the Boeing Defense, Space, and Security ASI office in St Louis. They provided input to the board concerning numerous phases of the investigation as well as coordination of additional Boeing and subcontractor assistance.

Engineering: Two Boeing engineers out of the Boeing Elmendorf C-17 Field Services office assisted with technical questions and analysis of the crash site. Numerous Boeing engineers, primarily out of Long Beach responded to technical questions. Some of the analysis was supplied in concert with two government engineers who were sent by ASC/WLM to support the SIB.

Supply Support: Boeing Elmendorf C-17 Supply Support function shipped seven devices, found in the wreckage, to vendors for analysis.

Weapon System Trainers: The Boeing training office at Altus AFB, OK provided access to training records. The Boeing instructors at the Elmendorf simulator provided assistance to the board during their simulator activity as well as information about the mishap crew's previous simulator training for the airshow.

Vendors: Four different manufacturers are analyzing seven components removed from the wreckage to determine if they can provide additional data for the safety investigation.

Aircraft Records: Boeing sequestered aircraft records, production build and nonconformance records, depot records, Field Service Reports, aircraft histories, training records and any other records potentially relevant to the safety investigation. Archival engine data was captured but only available through 15 July 2010. There is usually a delay in filing the engine data at Oklahoma ALC.

**Observations:** The data from the flight on 9 July shows a consistent training pattern. Is there a way to verify that the same crew was flying that aircraft in the same crew positions?

The Air Force Instruction (AFI) for this maneuver should be reviewed. When flown as the AFI is written the aircraft should stay within flight parameters. Evaluate if there is adequate data available for crews to determine how close they are to aircraft stall during these airshow maneuvers.

Review documentation and training for low level threat avoidance maneuvers. Determine if aircrews are adequately trained to understand stall speeds in various configurations during these maneuvers.

There has not been a requirement in the past to delete or sequester aircrew training records. Currently the system cannot lock out specific crewmember records so that those authorized access to the system cannot access them. It maintains records when they are no longer needed because it cannot delete individual crewmember records from the database. The Aircrew Training Records System should be modified to provide this capability.

## Analysis: Analysis of SFDR data for practice on 9 July (Aircraft P-70)

Background -

Aircrew on C-17A aircraft number 99-0170 flew seven flight profiles on 9 July 2010 that were identified on the flying schedule as airshow practice. The SFDR data for aircraft 99-0170 was reviewed for potential applicability to the C-17A mishap of 28 July.

The first minute of profile of each of these profiles was found to have a flight profile similar to that of the mishap flight. The profile segments within the first minute of flight, including the takeoff to level off, the left turn and the subsequent right turn of each of the seven practice profiles are summarized below.

Takeoff to Level Off -

Takeoff speeds averaged 128 KIAS leading to a maximum pitch angle between  $30^{\circ}$  to  $37^{\circ}$  nose up. The aircraft climbed to pressure altitudes between 824 to 1424 feet (568 to 1152 feet above field elevation). Key parameters associated with the takeoff and climb-out are shown in Table 1.

Table 1. Takeoff Parameters

Table 1 shows the pressure altitude recorded before losing the Weight-On-Wheels indication (Field Pressure Altitude). The Takeoff Speed reflects the speed at the time the Weight-On-Wheels signal changes to "0" (false). The maximum values of pitch attitude and angle of attack between the loss of WOW and the point of achieving the level off altitude is provided.

Stall warnings were issued once during profiles 2 and 3 and lasted for only one second in each time.

Left Turn -

A left turn was executed just prior/during the level off from the climb. The maximum bank angle achieved during the left turn varied from 46 to 64°. The parameters associated with the left turn of each profile are shown in Table 2.

Table 2. Left Turn Parameters

Table 2 provides the altitude and airspeed at which the left turn is initiated. The maximum bank angle and angle of attack attained during the left turn are also documented.

During the first profile, the aircraft rolled wings level for approximately 10 seconds before banking into the right turn. In all of the other profiles, there was no stabilizing at wings level when transitioning from the left bank to the right turn.

The flap handle was raised during the rollout of the left turn during flights 1, 5 and 6. The flap handle was raised while established in the right bank in the other flights.

A stall warning was issued during the left turn on flights 2 and 6.

#### Right Turn -

The right turn was accomplished at maximum bank angles between 56 and 63° in a level to a slight descending attitude remaining above 700 feet pressure altitude. The parameters associated with the right turn of each flight are shown in Table 3.

| Fligh       | nt#     | 1 2     | 2 3     | 3 4     | 4 5     | 5 6     | 5 7     |
|-------------|---------|---------|---------|---------|---------|---------|---------|

Table 4. Parameters at Flap/Slat Handle to 0°/Slats Extend

Table 4 documents the airspeed, bank angle, pitch, angle of attack, and altitude at the time the flap/slat handle is moved from half-flaps to 0° flaps/slats extend position. Also noted is whether a stall warning was issued within 8 seconds (average time for flap retraction) of the flap/slat handle movement. If a stall warning was issued within 8 seconds, the number of seconds between flap/slat handle movement and the stall warning is noted.

In all cases, the flap/slat handle was raised to retract the slats up position during the right turn. The airspeed at the time of flap/slat handle movement to slats up was greater than 184 KIAS with bank angles greater than  $46^{\circ}$ . The parameters associated with the raising of the slats during each flight are shown in Table 5.

| Flight # | 1       | 2         | 3       | 4       | 5       | 6       | 7       |
|----------|---------|-----------|---------|---------|---------|---------|---------|

Table 5. Parameters at Flap/Slat Handle to Slats Up

Similar to Table 4, Table 5 documents the airspeed, bank angle, pitch, angle of attack, and altitude  $\underline{\text{at the }}$   $\underline{\text{time}}$  the flap/slat handle is moved from  $0^{\circ}$  flaps/slats extend position to the slats retracted position. Also noted is whether a stall warning was issued within 8 seconds (average time for slat retraction) of the flap/slat handle movement. If a stall warning was issued within 8 seconds, the number of seconds between flap/slat handle movement and the stall warning is noted.

Stall warnings were issued during the right turn in every profile.

#### Stall Warnings –

Stall warnings were issued in each segment of these profiles (climb out, left turn and right turn). A majority of the stall warnings were issued during the right turn. Every flight experienced stall warnings during the right turn. In all but one case a stall warning was issued within 5 seconds of the flap/slat handle positioned to slats up (average slat retraction takes approximately 8 seconds). Stall warnings were also issued during the turn, after slat retraction. The data shows the total time that the stall warning was present

during these flights ranged between 5 and 18 seconds depending on the flight. A summary of when the stall warnings were issued and their duration is provided in Table 6.

| Flight #  | 1          | 2       | 3          | 4       | 5       | 6       | 7       |

| Retract   |            |         |            |         |         |         |         |
| Total     | 18 seconds | 5       | 11 seconds | 8       | 6       | 6       | 8       |
| Seconds   |            | seconds |            | seconds | seconds | seconds | seconds |

**Table 6. Stall Warning Summary** 

Table 6 documents the number of times a stall warning was issued in each of the three flight profile segments. The stall warning is issued for at least one second but a single activation could last for numerous seconds. Stall warnings associated with flap retraction and slat retraction are repeated from Tables 4 and 5 for completeness. A summation of the stall warning times for each flight is provided in the Total Seconds row.

#### **Boeing Analysis of SFDR Data**

Analysis of the SFDR data from the mishap event:

- This report is in response to the SIB Question in paragraph 6 of the list dated 8 Aug 2010.
- It presents an analysis of the maneuver for the period that begins at time 87455 where the airplane is being turned into a banked right turn.
- The bank angle rapidly reaches 60 degrees then backs off for about one second before continuing to increase for a period of about 3 seconds at a roll rate of about 1 degree per second.
- During this time the indicated airspeed increases from about 180 knots and peaks at about 200 knots.
- The normal acceleration reaches and slightly exceeds 2 g's.
- Flap retraction is complete just after initiation of the right banked maneuver and slat retraction is initiated one second later with all slats reaching full retract in about 9 seconds.
- Stall warning comes on about six seconds before full slat retract.
- The airplane stalled during slat retraction.
- Aileron on the stalled wing lost effectiveness degrading roll recovery ability.
- Although the bank angle eventually began to reduce, insufficient altitude was available for a full recovery.

More analysis is contained in the Boeing Part II Technical Report.

#### Hydraulic fluid testing

AFRL tested the fluid sample the SIB sent them however; their analysis was based on a MIL-SPEC fluid that is not used in the C-17. Therefore Boeing provided the following analysis of the fluid based on the MIL-SPEC fluid used on the aircraft:

- The Min/Max values that are listed for the tested fluid parameters are for hydraulic oil per MIL-PRF-5606. This is consistent with the entries provided in report's "Product:" and "Specification:" headers which state "...Petroleum Base" and "MIL-PRF-5606H (3)", respectively. However, the C-17A hydraulic systems use a synthetic hydrocarbon base fluid per MIL-PRF-83282. The Gas Chromatography results in the "Dispositions:" section of the report bear this out. As such, the Min/Max values for the MIL-PRF-83282 fluid will be different than those listed in this report.
- The Min/Max values that are listed are for "...new unused fluid". However, it would be more appropriate to compare the measured values against In-Service Limits when assessing the operating condition of the hydraulic fluid.
- Both of the above two issues will affect the pass/fail status of the measured fluid properties.
- In-Service Limits for MIL-PRF-83282 fluid properties can be found in the attached SAE Aerospace Information Report (see Table 2 on page 5 for new fluid properties, and Table 3A on page 11 for In-Service Limits).

Per SAE AIR 810C, the MIL-PRF-83282 new fluid requirements and in-service limits for for the fluid properties tested in the subject lab report are as follows:

Acid Number (mg KOH/g): New Fluid Reqmt: 0.10 max. In-Service Limit: 0.30 max.

Pour Point (deg C): New Fluid Reqmt: -55 max. In-Service Limit: none recommended

Water (ppm): New Fluid Reqmt: 100 max. In-Service Limit: 300 max.

Viscosity (cSt): -40 deg C New Fluid Requirement: 2200 max. In-Service Limit: none recommended

40 deg C New Fluid Requirement: 14.0 min. In-Service Limit: +10%, -15% (or 15.4

to 11.9)

100 deg C New Fluid Requirement: 3.5 min. In-Service Limit: none recommended

Based on these values, the pass/fail status of the fluid samples is as follows:

Acid Number: The 0.22 mg KOH/g result exceeds the new fluid requirement, but does meet the in-service limit.

Pour Point: The -72 deg C result meets the new fluid requirement.

Water: The 470 ppm result exceeds the new fluid requirement, as well as the in-service limit (by 170 ppm). Exposure to elevated temperatures during a fire would tend boil out any water that may initially be in the hydraulic fluid. Afterwards however, the hygroscopic nature of the MIL-PRF-83282 fluid, coupled with the fluid's exposure to the elements (i.e., not contained within a closed system after the incident), may explain the fluid's higher than recommended water content in the as-tested condition.

Viscosity: At -40 deg C, the 1968 cSt result meets the new fluid requirement.

At 40 deg C, the 13.9 cSt result nearly meets the new fluid requirement, and does meet the inservice limit.

At 100 deg C, the 3.50 cSt result meets the new fluid requirement.

#### **Structural Analysis**

Boeing provided the weights of various major components in preparation for their movement from the crash site. Company engineers also made recommendations about cutting the large pieces of the aircraft in preparation for shipment.

Ramp and Horizontal and Vertical Stabilize Weights and CGs

|                               |                      |                    |                |       |
| Cargo Ramp W/O Toes           | 8879                 | 1303.1             | 140.6          | 0.1   |
|                               |                      |                    |                |       |
| Wing Section Xw=737 to tip    | 5100                 |                    |                |       |
| Wing Section Xw=116 to tip    | 28600                |                    |                |       |
| Wing Section Xw=737 to Xw737  | 23500                |                    |                |       |

Wing weights do not include weight of nacelles, Pylons, flaps, spoilers, and slats.

#### **Component Teardown**

Seven Components were recovered from the wreckage and sent to their manufacturers for analysis of damage and testing to determine if more data was available in the Non-volatile memory. All seven devices are still undergoing testing but at least some data will be recoverable. Thus far Honeywell has confirmed there were no faults in the Air Data Computer prior to impact. No other results are available at this time. The SIB determined that data from the Flight Data Recorder showed that all these systems were providing accurate data at the time of the mishap.

| Part                                        | Manufacturer       |
|---------------------------------------------|--------------------|
| 2 Flight Control Computers (FCC)            | BAE Systems        |
| Warning and Caution Computer (WCC)          | Northrop Grumman   |
| Air Data Computer                           | Honeywell          |
| Spoiler/Flap Control                        | BAE Systems        |
| Core Integrated Processor (CIP)             | BAE Systems        |
| Propulsion Data Management Computer (APDMC) | Hamilton Sunstrand |
|                                             |                    |

**Conclusions:** The data from the SFDR shows the aircraft exceeded the flight parameters for its speeds and configuration just prior to the mishap.

The data also shows the aircraft started to recover by rolling wings toward level flight just before impact. However, the angle of attack was still too high and the aircraft did not have enough altitude to complete a recovery.

## J2. SYSTEMS PROGRAM OFFICE ANALYSIS OF SFDR

Mishap System: MDS: C-17A Globernaster III, Tail Number: 00-0173

Mishap Date: July 28, 2010

Investigator: ASC/WLME C-17 Division, 2590 Loop Rd

West, WPAFB, OH 45433; Tel.

I.INTRODUCTION: Factual Report of the structural integrity of mishap airframe under pilot maneuvers/inputs, and aerodynamic characteristics during the flight prior to mishap event. As described by recovered FSDR data. Furthermore, an assessment of airframe vulnerability to catastrophic failure due to its service life usage history will be performed. As compared to C-17 Full Scale Engineering Design (FSED), Full Scale Static Test, and Full Scale Durability Test.

II BACKGROUND: A United States Air Force C-17A took off from Elmendorf AFB on July 28, 2010 to practice air show demonstration profile 3 outlined in AFI 11-246, Vol. 5. Ch. 3 dated 2002. After successful climb and subsequent left turn, the aircraft initiated a right turn to return to runway center. Midway through the right turn, the aircraft crashed killing all four onboard crewmembers. The SFDR was recovered intact from the crash site and the data was downloaded.

### III EVALUATION:

Observation 1: G-load condition.

From recovered FSDR data a maximum vertical g-load (Nz) of 2 4219 g at time stamp 87465.19 was recorded. Flaps retracted and Slats extended (0/Ext). Recorded takeoff weight was 346,482 lbs. and recorded takeoff fuel weight of 61,000 lbs. For ½ Flaps, not Gs above 2.0 g where recorded.

### Analysis 1:

For the configuration – 0/Ext, there is a hard limit of 3.0 g for sustained maneuvers. The maximum g-load capability for Tail 00-0173 was calculated taking in account recorded takeoff weight, takeoff fuel weight, and 0/Ext configuration. Respective Nz limits for Tail 00-0173 during the maneuver are as follows. Nz limit for the wing is 3.15 g and 3.37 g for the fuselage and empennage. Therefore the described maneuver doesn't exceed airframe limit load and will not cause any damage to the airframe. Reference "SFDR Over-G Identification Criteria, Rev D".

## Observation 2: Loads of controlled surfaces.

Maximum recorded Indicated Air Speed (IAS) was 198 kts (clean configuration), recorded IAS at maximum g-load was 191 kts (0/Ext), and estimated maximum IAS at ½ flaps was 188 kts.

### Analysis 2:

Limit speed for ½ Flap is 250 kts, 280 kts for 0/Ext and 350 kts for clean configuration. Therefore control surfaces load capability was not exceeded at any stage of the maneuvers. Reference Section 3 of MDC-J9600 Rev. M \*C-17A Design Criteria Overview\*

# Observation 3: Airframe service life usage history

Service life usage for Tail 00-0173 was reviewed to determine the onset of catastrophic failure due to severe or atmormal usage. Reviewed all accumulated FSDR data up to Dec/2009, as presented on the latest C-17 Aircraft Structural Integrity Program Working Group (ASIP WG).

#### Analysis:

Bottom line: Per review of service life usage, Tail 00-0173 has not reached any of its required First Life Time durability inspections. Its usage severity is more benigh than the design base line (FSED), and is comparable to the average usage of tail number of comparable age. Compared to Lead the Fleet Tail numbers, Tail 00-0173 cumulative life usage is noticeable lower. Therefore any latent durability issues will manifest in lead the fleet aircraft before being present on Tail 00-0173. There are no airworthiness concerns related to Tail 00-0173 service life usage.

#### Detail analysis:

Tail 00-0173 is accumulating more flying hours than originally designed for, however accumulated damage is lower that design base line. The only exception is cabin full pressure cycles, which is accumulating damage faster than originally anticipated. This is being mitigated by the result of the full scale durability test, where the test article was tested to 9.5 lifetimes of full pressure cycles. Test result provided a test baseline that fleet damage is being managed to. Tail 00-0173 damage accumulation is below this test demonstrated base line, and it has not reached its first life time inspection for this failure mode. Accumulated full pressure cycles do impact the structural integrity of Tail 00-0173.

The C-17 Force Structural Maintenance Program (FSMP) was reviewed for outstanding modifications and safety of flight issues that could apply to Tail 00-0173. There was no safety of flight structural modifications outstanding for MDS C-17A. Furthermore the airframe does not have any static failure driven modifications and any outstanding modifications are driven by durability and economic concerns. Due to low cumulative usage. Tail 00-0173 had only two major structural modification scheduled for the near future. These are the "Web repair at Long 3 Aft Pressure Bulk Head, TCTO 1787" and "Installation of Skin Doublers, TCTO 1947".

The "Web repair at Long 3 Aft Pressure Bulk Head, TCTO 1787" was not performed on Tail 00-00173 and first life time inspection was schedule for May/2019. This is Not a safety of flight modification and no airframe catastrophic failure will result of structural member failure. Failure of this element is strictly driven by cabin full pressure cycles. Failure of Long 3 will cause load to be redistributed to the aft bulk head. Redistribution will cause a long term durability concern of the bulk head. Gradual lost of cabin pressure will be the result of the aft bulk head failure. Lost of cabin pressure will be a very noticeable indication of structural element failure. There was no indication of Tail 00-0173 having issues maintaining cabin pressure. Therefore the airworthiness of Tail 00-0173 was not affected by not performing the "Web repair at Long 3 Aft Pressure Bulk Head, TCTO 1787" major modification

The "Installation of Skin Doublers, TCTO 1947" was not performed on Tail 00-0173. Fuselage cracks will develop between frame stations Y=511.0 to Y=585.0 and Longeron 18 to Longeron 23. Crack development is driven by direct pressure impingement from Thrust Reverser on N/EAT nacelle aircrafts. This is NOT a safety-of-flight issue due to slow crack growth rate, and large damage/crack arrestment capability. Airframe can withstand a two bay long (48 inch) crack without any flight restrictions. TCTO 1876 was performed on Tail 00-0173 as a fleet stabilization initiative. This TCTO installed three vertical reinforcement straps that effectively stop crack development and are able to carry full hoop load in the event of skin failure. Analysis was performed on the temporary reinforcement and it was determine to be structurally sound. Therefore the airworthiness of Tail 00-0173 was not affected by not performing the "Installation of Skin Doublers, TCTO 1947 major modification.

IV DETERMINATION: After reviewing available FSDR data for Tail 00-0173, is my determination that loads generated by the maneuver performed during the training mission did not exceed airframe limit loads and could not have caused airframe static catastrophic structural failure. Furthermore Tail 00-0173 service life usage does not support the early onset of durability failures that could have affected the airworthiness of Tail 00-0173. IATP data was reviewed up to Dec/2009, at the time of the analysis this represented the most complete data available for Tail 00-0173. Due to collection practices there is a 6 month lag on collected IATP data. This lag does not have a major impact on the service usage analysis. Usage generated during these 6 moths represent a small portion of the overall cumulative usage and will have a proportional effect on the overall usage trend.

#### CONFIGURATION MODIFICATION REMARKS:

Removed 1 "Std 2 gal liquid container" from station 260

Removed 1 "Hot cup" from station 260

Removed 1 "Kit, passenger service" from station 280

Removed 6 "Blankets, large" from station 280

Removed 6 "Pillows, large w/case" from station 280

Removed 54 "Blankets, small" from station 744

Removed 54 "Pillows, small w/case" from station 744

Removed 102 "Pax info cards" from station 280

Added 7 "Bodt Armor" to station 280

Added 3 "Parachutes" to station 280

Added 8 "Emerg Pax Oxy Sys (EPOS)" to station 744

Added 7 "Survival (Vest,ML-4,CWU-16/P)" to station 280

### N1. COCKPIT VOICE RECORDING TRANSCRIPTS

### Track 2, Recording 2:

MP- "uh 43"

MCP - "Alright I"ve got the flaps and slats, let"s do an after landing"

MP-"Alright"

MP- "And uh we"ll do a, I don"t know, full stop taxi back"

MCP - "Yeah that"ll work too"

\*Beep\*

MP- "Slat disagree"

MP- "Transient"

MCP - "Clear right crew"

Tower - "Elmendorf Tower Raider 46 eight mile final on the ILS runway 6, three on lock"

Tower - "Raider 46, wind 260 at 4, runway 6 clear to land, your landing is over a raised cable 1780 feet from the approach end"

MSO - "Did that NOTAM not make it in?"

Tower - "Raider 46 clear to land, runway 6"

MP- "I specifically called "em and give them the data on it, oh I guess...."

MCP - "We"re down here to the...."

MP- "Oh, hang on, let"s wait here and talk to tower"

MP- "Tower Sitka 43 would like to taxi down to Bravo and hold short there"

Tower - "Sitka 43 contact ground"

MP- "[Expletive]

MP- "Ground Sitka 43"s clear the active at Alpha would like to taxi to Bravo and hold short"

Ground - "Sitka 43 heavy Elmendorf ground approved as requested"

MP- "Sitka 43"

MCP - "Rollin crew"

MCP - "Dude, you know what, I"m glad we didn t[Expletive] have

with us"

MSO - "No [Expletive]

MP- "Yeah"

MP- "Well, we haven't done anything"

MCP - "No, I just mean because it"s just been such a cluster[Expletive]

MP- "Yeah"

MLM - "Hey, we're going to be switching sides back and forth aren't we?"

MP- "I hear you like to switch sides"

MLM - "Yeah, front back front back"

MLM - "Hey ah, which side is the audience going to be on?"

MP- "They're going to be on the number four engine"

MCP - "On the critical side"

MLM - "Okay, so I need to be on the other side of the airplane?"

MP- "No, yeah you need to be on the number four side"

MLM - "Okie dokie"

MCP - "Hey bro, do you want to ask if we can pull into here?"

MP- "Why?"

MCP - "Kind of like we did the other day? Until these [Expletive] have everything set up, and all there arrivals are in. Because depending on where we"re parking those guys to prevent from blocking that taxi way."

MP- "That might not be a bad idea"

MP- "I"m hoping they have it pretty much down by the time we get there if we taxi slow, and just yeah minimize brakes on the taxi"

MSO - "Is that secondary FAF, is that overlaying or does that need to be fixed?"

MP- "I"m working on that right now"

MSO - "Oh you"re working on that, okay"

MP- "I"m doing the co-pilots [Expletive] job is what I"m doing"

"This is tactical, this is tactical"

MSO - "Hey MP does \$1,000 to about to \$1,400 sound about right for that screen for a new"

MP- "No"

MSO - "oh, Ok"

MSO - "Well that's what there..."

MP- "Well it is pretty big"

MSO - "Delight snap screens about that size, anywhere from \$1000 to \$1400 on Amazon and different spots"

MP- "For that size, yeah maybe it is a pretty big screen"

MSO - "Screens they don't really get [Expletive] up unless they deliberately get [Expletive] up right?"

MP- "True statement"

MSO - "So wonder what I should offer him, he"s just trying to get rid of, he told me that, he goes, I said how much you asking for and he said..."

Tower – "Calling ground 21A coming in completely unreadable"

MSO - "He said well I didn"t really put a price on it I don't think, and I said I don"t know I"m on the phone that I was looking at it on, and he said I don"t know, I"m just trying to get rid of it, those were his exact words."

Tower – "Calling 21A still coming in extremely unreadable"

MP- "Good words"

MSO - "So what does that say for you to price?"

MP- "5, 400 maybe, probably go less then that"

MCP - "This the Russian open skies flight that they still haven't gotten the FAA clearance form for us to fly tomorrow.... or a Friday"

MP- "Huh"

MCP - "The [Expletive] ruskies are here"

MP- "What do you know, we"ll show them"

MCP - "So, were holding for two dudes right?"

MP- "Uh yeah"

MCP - "Hercules and somebody else"

MP- "Hercules...Hercules"

MSO - "Alright, well we got a minute"

MSO - "Uh just got one thing for ya there co-pilot, when you push the power up I would be very [Expletive] careful about what you did, because they were almost at idle and you pushed them all the way up."

MCP - "What are you talking about?"

MSO - "Point on the takeoff"

MP- "Yeah"

"Okay"

MCP – "Oh the spool up?"

MSO - "And so what we ended up having was one was here, two was down here, three was here, and four was here, if these two would have been reversed, we would have been [Expletive]

MP- "You would have felt that"

MCP - "You get the moment, as opposed to pushing a 1.15"

MSO - "Yeah"

MCP - "Yeah, trackin"

MSO - "Yeah, I mean because they take a while to spool up, but when they go they [Expletive] go"

MCP - "No, that"s a good feedback"

MCP - "[Expletive] I hate it when the MSO has legit [Expletive]

MP- "Doesn"t happen often"

MP- "Alright mission computer data is checked for the pilot and the (?) I"ll take it, you take the rest"

MCP - "Alright man you got inboards"

MCP - "Pilot has the aircraft"

MP- "Hopefully they re able to get some of that ..."

\*Stabilizer motion\*

MP-"...down while they"re waiting, I bet they can"t"

MSO - "Next time, don't call me MSO I'm RACM"

\*Laughs\*

MLM - "Well, Blue Angels sure can"t count"

MLM - "1, 2, 3, 7, 5, 6"

"That"s what the critique is going to be"

MP - "That"s a radio call"

MLM - "And then they put 4 on the end, what the [Expletive]

MP- "Be advised, it appears the blue angels cannot count"

MSO - "Be advised the Blue Angels are out of order"

"There"s a P3"

MSO - "Awww man lets[Expletive] this monkey"

MP- "What did you tell the camera dude?"

MSO - "I told him the first take off would be a weather check and then the next time he saw us go we"d be, well I"ll call him again,...just let him know were good, were legit, too legit to quit"

MLM - "Is this a courtsey?"

MP- "Say again?"

MLM - "Is this a courtsey, a bow?"

MP- "Negative"

MCP - "Aww this guys doing a 180 hopefully he"s going down here"

MCP - "Alright I got the radios again"

MP- "Yes you do"

MCP - "You talking to him on victor or uniform"

MP- "Uh victor, cause I couldn"t hear these other guys coming in"

"No fighters on frequency, supposed to be on victor I think"

MP- "Yeah"

"Love, love"

MCP - "Tower Sitka 43 is checking in with you, holding short 24 at Bravo, well be waiting for barrier (?) coming down"

MSO - "Is that thing still up?"

MP- "Looks like it, I think they"re waiting for the Herc to go over it and then they re going to drop it"

MSO - "I"m going to go take a

"How much gas we got?"

MP- "Uh, 61K left we"ll be fine, an hour in a half of flying, we"ll probably burn 30"

MP - "Probably land with 20"

MLM - "Are we going to be here for a sec?"

MP- "Yes we will"

MLM - "I"m going to do a right troop door check"

MP- "Copy"

MLM - "Just to make sure it doesn"t get hung up like WITNESS 5 kept saying"

MP- "You're cleared to open; he's the only person that's ever had that problem by the way"

MCP - "Tower Sitka 43"

```
Beep
```

MP- "Troop door"

Tower - "Sitka 43 Tower"

MCP - "Yes sir, just wanted to make sure you guys copied, we're holding short 24 at bravo for the barrier"

Tower - "Affirm and I have the barrier maintenance crew out there right now pulling out your cable for you"

MCP - "No worries"

MLM - "Door checks good"

MP- "QB...Is that Quebec?"

"OB?"

MP - "No, that"s Marines"

MLM - "Yeah, it used to be El Toro, I think now its Miramar"

MLM - "Is it on a Herc?"

MP- "Yep"

MSO - "Hey trigger, I just want to say you look good in your helmet"

MLM - "Yeah, it"s starting to bring me...give me flashbacks of my herc days... at least I"m not wearing goggles"

MP- "Make sure were good on the checklist once that suckers down"

MCP - "I"m going to leave TCAS on since there are other airplanes out here"

MP- "Okay, I like that"

MCP - "TA/RA"

MSO - "TA/RA"

MCP - "Were going to BA set zero"

MP- "Uh, yeah good call"

MSO - "BA"

MCP - "29.79?"

MP- "I"ve got 29.82"

MP- "How about 81, nope 80...nope 79 there it is"

MP- "29.79 set"

MCP - "co-pilot"

MCP - "Alright, following before takeoff demo checklist is complete we're standing by on the Line up checklist crew"

MSO - "Alright, so how much how much room do I need on the sides of the screen to be open...if any?"

MP- "What do you mean?"

MSO - "In other words if I put the screen up do I need the sides of the screen to have any opening whatsoever?"

MP- "Like between the sides of the screen and the wall?"

MSO - "Yes"

MP- "No I do not"

MSO - "Like not an opening, but does there need to be a border there of any kind?"

MP- "No, not really however... keep in mind the best sitting position is one in a half screen lengths from the screen, so the larger the screen the deeper the room you"ll need"

MSO - "Right"

MP- "To have decent viewing of it"

MSO - "Right, assuming that means you use the whole width of the screen"

MP- "True, but if you don't use the whole width of the screen then it will look like crap"

MSO - "Yeah, okay"

"1..2..3..7..5..6..4"

MSO - "So the width is 10, so I need 15ft from the screen"

MP- "Right"

MLM - "Why don"t you just paint the wall white or hang a sheet, save yourself fifteen hundred bucks?"

MSO - "I don't know, why don't I do that?"

MP- "It kills the image quality"

MSO - "Yeah, it kills the image quality"

MLM - "Don't we have any of those old whiteboards laying around you could use?"

"You'll get a glare off the whiteboard"

\*\*Laughing\*\*

MP- "Can't have glare, what the hell"

MLM - "Dude, I still have a regular DVD and a 19...what 99 tv so..."

```
"How can you watch
 on that and still respect yourself..?"
MLM - "I can on my MAC"
"Good point"
MLM - "And on my I phone"
MSO - "Okay, so this thing says...let"s see here..."
MP- "I think the barriers off the runway now"
MSO - "Alright, he put in the ad on the screen; he said it is gray or deeper black...so"
MP- "That"s what you want"
MSO - "Okay"
MP- "It"s not really gray, if you look at it...it still looks white"
MSO - "It looks white in the picture"
MP- "Right, mines gray"
MP- "Alright here he goes"
MSO - "So if I bought that one, mine would be bigger"
MP- "Do you have to buy something to make yours bigger MSO is that what you're saying"
MSO - "Hey, if I'm happy with it that"s all that matters"
laughing
MLM - "I just
 and it
MSO - "Alright, talk about your imagination MLM"
laughing
MP- "You
 too"
laughing
MLM - "All it does is
laughing
MLM - "Hey I"m proud to be
laughing
MP- "Alright, so we need to confirm no inbounds, and then we"ll have the air space for 10"
"Got it"
MCP - "Did you get the three hundred approved?"
MP- "Huh?"
MCP - "Did you get the three hundred approved?"
```

MP- "What do you mean...three hundred?"

MSO - "Don"t ask don"t tell"

MP- "I think I saw that in a survey somewhere"

MSO - "It"s certified, certified for the approved maneuvers were about to do"

MCP - "That was funny, the last time we did it you know we rolled in and somebody was like

"how fast you guys do that?" we all looked at each other and were like two-fifty"

\*laughing\*

MCP - "It"s like we never even missed a beat"

MSO - "If you don't have a hair on your [texploite] you don't hit two hundred feet today MP"

\*laughing\*

MCP - "Yeah, each time we [Expletive] land"

\*laughing\*

MP- "Alight, so looks like they"re done lets pimp tower, tell them were still ready to go as soon as they don"t have any inbounds"

MCP - "And tower, heads up for Sitka 43 sir were going need the air space completely cleared out for probably about ten minutes so, looks like the barrier guys are done. If you guys don"t have any inbounds were ready to go"

Tower - "And Sitka 43 heavy, I do have an inbound we got a BE-20 approximately twenty-five miles to fly for a TACAN visual to 6. If I can get you airborne and get you over Goose Bay and then once he"s down bring you inbound if that will work for you?"

MP- "nope, nope"

MSO - "Twenty five miles in a BE-20"

MCP -"I got it"

MCP - "Alright, sir that"s not going to work for us, we need to do the full profile or nothing. Can you check for us and verify that the NOTAM made it in there?"

Tower - "The NOTAM did make it in there, we have it for you we were just told to work in between your profiles for inbounds and out bounds, so I didn"t know if you wanted, basically your profiles going to start on takeoff and then you"re going to run through your sequence, is that accurate?"

MP- "yep"

MCP - "That is accurate, yup were going to uh for takeoff we"ll do uh probably about three passes and were going to land, were going to have to go to goose in between to cool the gear, but we"ll let you know when were going out and when the profiles done."

Tower - "Roger that, after this BE-20 comes inbound I don"t have any proposals for a little while, would it be alright if we just waited for him to get down?"

MP- "Well what"s the time, how much time does he need? Is he ten minutes out or is he.."

MCP - "Twenty five minutes on the TACAN circle"

MP- "Twenty five minutes or miles?"

MSO - "Twenty five miles out and then he starts to circle"

MP- "Yeah, so..."

MSO - "He"s going to be forty [Expletive] miles"

MCP - "That"s fine sir for Sitka 43, we"ll wait for this one and then once the air space is cleared out we"ll go"

Tower - "Roger that, thank you sir"

MP- "That"s what the [Expletive] NOTAM"s for, to kick them out"

MSO - "I mean he can hold on the [Expletive] TACAN"

MP- "Yeah"

MSO - "Jesus"

MCP - "The only reason I said that is because it might be one of our guys, it"s probably one of the north guys"

MSO - "A BE-20?"

MCP - "Yeah, its King Air right?"

MP- "No"

MCP - "What"s a BE-20?"

MP- "No"

MSO - "It"s a Beech Craft"

MP- "Yeah it"s not a C-12...I don"t think it is....BE-20"

MCP - "[Expletive] it, we"ll get it here"

MSO - "Google it"

\*Laughing\*

MCP - "Dude how awesome would it be if we had Col witness 16 on board? Now I'm going to the other end of the spectrum, so right now..."

MP- "Right here it would be awesome"

MCP - "All of a sudden he sees our world"

MP- "uh huh"

MCP - "We got a NOTAM published were trying to do the air show...

MP- "And were waiting on a BE-20 on a twenty five mile TACAN"

MCP - "Doin" practice approaches"

MSO - "It"s a King Air"

MLM - "Hey MP"

MP- "Yep?"

MLM - "texted me that they did 1.7 total flying with nine total landings, so we got to put those in the forms"

MP- "Ah, you didn"t do it?"

MP- "Slacker"

MLM - "No, because he didn"t know how much what his total flying time and stuff was"

MP- "Okay, we"ll write it in dude"

MP- "You know where all that goes"

MLM - "Yeah"

MP- "Alright"

MLM - "I"ll do all of that crap after we take off"

MP- "Well we"ve got ten minutes so...plus five minutes"

MLM - "Well then I got to take the harness off, and then I got to put it back on"

MP- "Oh yeah, yeah, you" re way back there, never mind"

\*Laughing\*

MP- "You"re scared of a little work, it"s all good, I understand"

MLM - " speaking of which, what was our first take off and landing?"

MP- "We did one of those?"

MLM - "Well you can get a dual AFTP"

MP- "Yeah, I think so, we took off at 5:30 I think, and we landed at about 5....12, would you say, about 12 minutes?"

MCP - "Yeah that was definitely what time it was"

MP- "I"m pretty sure that s what it was"

MLM - "Alrighty"

MSO - "Have you seen the new...anyways have you seen the new track pad...that apple released?"

MCP - "What is it?"

MSO - "Track pad...you know how you like, how your the laptop, the Mac Book has a Track Pad on it?"

MCP - "Okay"

MSO - "Well they released a new wireless track pad for like if you have a desktop computer"

MCP - "No[Expletive] huh"

MSO - "It"s actually the same track pad except it s bigger, pretty sweet"

MP- "That is pretty cool"

MSO - "So you can get a little wireless keyboard, little wireless track pad and then the only thing you need is to machine something"

MP- "Is to what?"

MSO - "To like invent something that would hold those two items together in one"

MP- "So it"s like..."

MLM - "Duct tape and cardboard"

MP- "So it"s like a laptop?"

\*Laughing\*

MSO - "Like what I've got at my house where you get a..."

MP- "Oh yeah"

MSO - "Where you get like a... or downstairs in a theatre or whatever you hook a Mac mini up to that thing..."

MP- "Hell yeah"

MSO - "New track pad, see"

MP- "Sweet"

MCP - "That"s cool"

MSO - "Conveniently priced at \$69"

MP- "There still five minutes out"

MSO - "Yup,...[Expletive] King Airs are not [Expletive] fast, should have had them [Expletive] turn and hold"

MCP - "They got kicked out of the dissimilar formation for..."

MP- "Being to slow"

MCP - "For being too [Expletive] slow"

MLM - "Hey, can I ask a favor?"

MP- "You can ask"

MLM - "Can you guys keep track of the gears cycles"

MCP - "It"s tenMLM"

MLM - "During the demo?"

MCP - "Yeah absolutely I will"

"1…"

MLM - "Yeah I already got that one"

"2…3"

\*Laughing\*

MLM - "So it"s just 10?"

MCP - "I"ll let you know at the end"

MCP - "Now what constitutes a cycle, up? Or up and down? Is up and down one? or is up and down two?"

MLM - "Every time you put it down that"s the gear cycle"

Tower - "(?)...8 miles on the TACAN runway 16 to circle to runway 6....(?)"

"That"s agreeable"

MSO - "8 miles out, and he"s circling..."

Tower - "Northwest 7 approved as requested report gear down wind 240 at 5 runway 6 clear to land"

Tower - "Northwest 7 is gear down clear to land runway 6"

MCP - "Might have DV"s on board or something"

MSO - "DV"s and he"s doing a TACAN"

MP- "I doubt it"

MCP - "Oh yeah"

MCP -"What you got going on there buddy?"

MP- "I really won"t discuss that until after the air show"

MCP - "Rhymes with itches?"

\*Laughing\*

MP- "I will say its MSO "s fault"

"What"d you do?"

MP- "It"ll make for a humorous story, I"m sure"

"You got to just tell us now"

MP- "So, uh..."

MCP - "Doesn"t look like it hurts to touch, it so obviously cutting some kind of a wound, you got stitches didn"t you?"

MP- "Oh no"

MP- "No...no it"s to cut down on mobility"

MP- "So, I got roped into going out the other night because MSO ... kept giving me [Expletive]

\*Laughing\*

MSO - "Oh no you didn"t"

MP- "Dude, you gotta go out you gotta go out you gotta go out"

"Hey, I"m going to try that number one SOV"

"Give it a whack and try to turn it on there"

MP- "So I finally said alright [Explaine] it I'll go out, and Thursday what happens with MSO within five minutes he gets booted out of the bar for being too drunk and I'm sitting there on my own, actually I was with the rest of the guys at the wedding with the wedding party because it was the uh brother in laws.....

MSO -"Aww there commencing the circle"

MP- "It was his brother in laws bachelor party, so of course what are we gonna do is ride the bull..."

\*Laughing\*

\*Beep\*

MCP - "What was her name?"

MP- "I was riding the [Explosive] out of that bull, and environmental, shutting it off again"

MP- "Underhand"

MP- "And moved forward and twisted like this caught myself with the thumb, heard a crack"

```
MP- "Over the music, over the music"
"Ohhhh, owe"
MCP - "It, doesn"t look all that swollen though"
MSO - "Does it rhyme with choke?"
MP- "Yeah, it does"
"Oh"
MSO - "You didn't get a cast on it?"
MP- "Haven"t decided yet"
MSO - "You [Expletive] why would you do [Expletive] like that?"
Laughing
MCP - "Didn't you mess this one up last time from snowmobiling? You messed up...."
MP- "No this finger was broke last air show I did"
MP- "My other hand is still sore from (?) on MSO"
MCP - "Dude, is that [Explicitive] coming down or is it me?"
MCP - "Watch (can"t make out name?) Come in, I'd like to give a PIREP of 2300"
MCP - "That"s what I would "ve done"
Laughing
MCP - "If I was being a [Expletive] like alright [Expletive] you don't want me to circle"
Laughing
MCP - "It"d be funny too, I"d do it on like uniform or something like that so you guys, and I
know you guys could still hear me"
Laughing
MCP - "But, I wasn"t really calling it in"
MCP - "That"d be funny"
MP- "What approach did they [Expletive] do?"
MCP - "TACAN circle"
MSO - "TACAN to 16 circle"
MP- "I didn"t think the TACAN was so long"
MSO - "Yup, we would have had one down, I"m just saying"
```

Tower - "Northwest 7 if able left turn at delta, contact ground when off"

MP- "Yes we would have"

Tower - "Northwest 7 left turn at delta wilco thanks"

MCP - "Yeah, he"s a good dude"

MCP - "Alright, MLM you ready to go?"

MLM - "Roger"

Tower - "Sitka 43 heavy position and hold runway 6"

MCP - "Onto hold runway six sir we would like to taxi up so"

Tower - "Like to taxi, what was that?"

MP- "Ah don't, just uh disregard, he doesn't care...It's our [Expletive] field we''ll do what we want"

MCP - "Ah disregard, I was just going to let you know were taxiing out but I guess we pretty much have the air space so."

Tower - "A'FIRM"

MSO - "Blue Angels, 1...2...3...7...5...6...4"

\*Laughing\*

MP- "What time is it?"

MSO - "Game time"

MP- "[Expletive] right"

\*Laughing\*

"What the [Expletive]

MCP - "Alright crew, slats are extended flaps are one half index 75 for the co-pilot"

MP- "Safety, I"ll be safety"

Tower - "Sitka 43 heavy your discretion wind 240 at 4, runway 6, clear for takeoff"

MSO - "That"s your call on the takeoff, try to piss me off, I know what I"m doing here"

Tower - "The space is yours, so advise when ready to land"

MCP - "Roger cleared for takeoff runway 6 Sitka 43"

MCP - "Spoiler switch is armed, anti ice is off, TOGA mode hey how is this going to [Explosive] with us while we're doing the profile with the icing on there?"

MP- "It"ll be fine, I"ll just minimize the use of number one"

MCP - "Alright so..."

MP- "This is lovely"

MSO - "As soon as you push "em up I"ll try it, if you want?"

MCP - "Hydraulic reservoir temperatures are checked, exterior lights are set, IFF we are squawking, Line up checklist is complete"

MP- "15 seconds"

MCP - "Want to fix you're wiper real quick?"

MP- "It won't, it"ll be alright, it"ll fix itself when we"re airborne"

MCP - "Alright, 5...4...3...2...1 brakes, release"

MSO - "Hacking clock if you want"

MCP - "Air speeds alive"

MCP - "80 Knots"

MCP - "Go, rotate"

MSO - "gear, gear, gear, gear"

\*Beep\*

"Tank not inert crew"

MCP - "Very nice brother"

MCP - "Thirty to your heading...10"

MSO - "Thousand 1...thousand 2...thousand 3...thousand 4...5...6...7...turn"

\*Stall Stall Stall\*

MCP - "Acknowledged crew"

MCP - "Temperature, altitude, lookin" good"

MCP - "That"s a tight turn"

MSO - "Watch your bank, WATCH YOUR BANK, WATCH YOUR BANK!"

MCP - "(QUICK/STICK?) GRAB IT!"

MCP - "MAX POWER, MAX POWER"

\*sink rate, sink rate, sink rate\*

MP- "Oh my god"

-END-

#### N2. AIR TRAFFIC CONTROL TRANSCRIPTS

### N2.1. SITKA 43 WATCH SUPERVISOR POSITION TAPE TRANSCRIPT

#### DEPARTMENT OF THE AIR FORCE 3<sup>rd</sup> Operations Support Squadron (PACAF) Elmendorf AFB, Alaska

3 August 2010

MEMORANDUM FOR 3 OSS/OSA

FROM: 3 OSS/OSAT

SUBJECT: SITKA43 Watch Supervisor Position Tape Transcript

This transcript includes transmissions made on 12 February 2010 between 2225z and 2237z. The Tower's time was recorded from GPS by the DVRS at the time of this transcript. This transcript is from the WATCH SUPERVISOR position and includes transmissions from LOCAL. COORDINATOR, APPROACH, GROUND, and PAR1. The following is a list of abbreviations used throughout the transcript:

A11 Anchorage Approach
AM Airfield Management
L111 Lake Hood Tower
MAJ Major V
MT Merrill Tower
N47 NORTH47
S43 SITKA43
WS Watch Supervisor

#### PHONE CALL #4 WS: (phone rings) 02:32:41 WR: "Hello?" 02:32:58 , when he went down he scattered wreckage across the railroad tracks, who do I contact to let them, to find out if there is a train or to put word out that it went 02:32:59 across the tracks?" WR: "So, you're gonna do what?" 02:33:07 WS: "I don't wanna call off base and tell them we had a plane go down without PA but he went 02:33:09 across the railroad tracks that go through base." WR: "Holy [Explaine] man, I see all the smoke. I'm on my way now, umm, does public affairs. I 02:33:14 imagine public affairs might know already." WS: "Okay, I have no idea, I'll try to figure our how to get in touch with public affairs." 02:33:24 WR: "Yeah, see if you can get in touch with public affairs, and then uhh, unim, I think their number's eight-one-five-one. It's either eight-one-five-one or five-one-eight-one and uh, you 02:33:25 know, just to let them know that you're gonna call or that you wanna notify the, with, railroad." WS: "Okay, well umm, okay you said eight-one..." 02:33:40 WR: "It's either, eight-one-five-one or five-one-eight-one." 02:33:45

#### END OF TRANSCRIPT

WS. "Okay, thank you sir."

02:33:47

"I certify this to be a true and exact transcript of the original recording on file at this office at Ehmendorf AFB, AK."

## MEMORANDUM FOR C-17 FLIGHT CREW MEMBERS

FROM: 3 WG/CC

SUBJECT: C-17 Aerial Demonstration Programs

1. This document implements the 3rd Wing's C-17 Aerial Demonstration Program. All 3 WG Aerial Demonstration C-17 aircrew (both current and upgrading) are required to be familiar with and adhere to guidance contained in this document. Deviations to this program must be approved by the 3 OG/CC.

Nec Koresor estre K

ELLI EL KAZAMAZARRENTENTEN

Please forward any comments or direct any questions concerning the C-17 Aerial Demonstration Program to 3 OG/OGV at

> THOMAS L TINSLEY Brigadier General, USAF Commander, 3rd Wing

### 1. Concept of Operations.

1.1. The USAF uses acrial demonstrations to exhibit the capabilities of USAF aircraft. Acrial demonstrations are defined in AFI 11-209 and AFI 11-246 $\hat{V}6$ . As a general rule, an aerial demonstration is any event that exceeds a straight and level, single-ship pass (flyby). This includes airdrop, overhead approaches and assault takeoffs landings (max effort), 1.2. Acrial Demonstration crews will consist of an Aircraft Commander (AC), Copilot, Safety Observer and Loadmaster. All crewmembers will be trained and certified IAW this document. Additionally, a narrator will be used when executing the C-17 Demo Standard Profiles listed in AFI 11-246V6 chapter 3.

### 2. Crewmember Selection.

- 2.1. Commanders will select highly qualified aircrew members who possess proper military bearing and the ability to communicate with the public. Commanders will select a maximum of three (3) aerial demonstration crews per squadron.
- 2.2. Aerial demo aircraft commanders will be current and qualified instructors or evaluators.
- 2.3. Aerial demo copilots will be current and qualified aircraft commanders (as a minimum). Commanders should select copilots who have the skills to eventually upgrade to aerial demo ancraft commanders.
- 2.4. Aerial demo safety observers should be selected on the basis of eventually upgrading to acrial demo copilot and/or aircraft commander. Aerial demo safety observers will be mission qualified, highly-seasoned First Pilots (FPs) (as a minimum). Demo qualified aircraft commanders or copilots will also be qualified to act as demo safety observers.
- 2.5. Aerial demo loadmasters will be current and qualified instructors or evaluators.
- 2.6. Narrators should be rated C-17 crewmembers or 3 MXG C-17 maintenance team members; however, any individual familiar with C-17 flight operations may perform narrator duties when trained IAW this document. The 3 OG/CC will be the approval authority for utilizing any narrator assigned outside of the flying squadron or 3 MXG.
- 3. Certification Requirements. IAW AFI 11-246 and the PACAF CONOPS, only certified aircrews will fly Demo Standard Profiles at approved military or civilian events. 3 WG aerial demo crews will be certified as hard crews by the 11 AF/CC (narrators do not need certification). Upon successful completion of the Aerial Demonstration Training Program, aircrew members will meet a SQ/CC Review and Certification Board and a follow-on 3 WG/CC interview to assess overall suitability to fly the Demo Standard Profiles. Based on commander availability, this interview may take place at any time during the upgrade process. 3 WG/CC will annotate the Review and Certification Board minutes, recommending the candidates for certification and also submit an endorsement memo recommending certification to the 11 AF/CC. The 11 AF/CC will review a training demonstration performance (may be accomplished by video) and certify the entire demo crew by signing the endorsement memo. A copy of the memo will be kept in each crewmember's Flight Evaluation Folder.
- 4. Program Oversight. 3 OG/OGV is the OPR for the Aerial Demonstration Program, including critique and review of flying performances. As such, at least one OGV C-17 pilot and loadmaster will complete aerial demonstration training. If authorized by PACAF/A3 (e.g. via

waiver), these individuals will be certified individually and not as a part of a hard crew, else they will complete training short of certification. The OGV C-17 pilot will complete training as an Aerial Demonstration Aircraft Commander. If availability allows and desired by the squadron, these individuals may become fully certified as part of a hard demo crew. The OGV trained crew members will not count against the squadron's maximum of 3 hard crews unless they are designated as part of a hard crew.

### Upgrade Training Program.

5.1. Overview. Aerial demo crewmembers will accomplish all of their training with their assigned hard crew. Aircraft Commander, Copilot and Sufety Observer candidates will complete a minimum of one (1) simulator sortie and one (1) aircraft flight during which time the candidates will perform the standard 10 minute and 12 minute profiles with a demo-qualified AC. The 6 minute profile will, at a minimum, be discussed with the instructor. Loadmaster candidates will also perform the 10 minute and 12 minute profiles; however, simulator training is not required. The C-17 Standard Profiles can be found on the AMC website at:

- 5.2. Ground Training. Aerial Demo AC, Copilot and Safety Observer candidates will review AFI 11-209 with PACAF Sup1, AFI 11-246V6 (to include a thorough study of all standard profiles), PACAF CONOPS, AFI 11-2C-17V3 and AFI 11-401 with a demo-qualified AC. Ground training will be completed prior to commencing simulator training.
- 5.3 Plight Training.
- 5.3.1. Simulator. Simulator training will be accomplished under the supervision of a demoqualified AC. Upgrade candidates may occupy primary crewmember positions at the same time (i.e. the demo-qualified AC does not have to occupy a primary crew position). Simulator training will be completed prior to commencing aircraft flight training. Crewmembers must demonstrate proficiency in all profiles prior to moving to the airborne training portion. Additional simulator training sessions may be used if necessary.
- 5.3.2. Aircraft.
- 5.3.2.1. During aircraft flight training, individuals upgrading to Aerial Demo AC and Copilot will be trained during the same sortic with their associated hard crew Safety Observer occupying the right ACM scat. The training must be supervised by a demo-qualified AC who will occupy either the pilot or copilot seat as appropriate (i.e. the demo-qualified AC will occupy the pilot seat while training the new PNF). Crewmembers must demonstrate proficiency in all profiles. 5.3.2.2. Demo Loadmaster candidates will be trained in the aircraft by a demo-qualified loodmaster. In extenuating circumstances, Demo Loadmaster candidates may be trained by a demo-qualified AC.
- 5.3.2.3. Narrators will be trained by either 3 OG/OGV or any Demo AC and perform the standard profile script during at least one (1) demo crew practice.
- 5.4. Documentation. All training areas may be covered more than once, but will not be signed off by an instructor until the desired standard has been attained. Upgrade training will be documented IAW Attachment 1. Once all requisites are complete, squadron training will document program completion in the Training Management System (TMS).
- 5.5. Flight Training Locations. Aerial demonstration upgrade and proficiency training will only be accomplished at Elmendorf AFB, Allen AAF, Eielson AFB, Ladd AAF, McChord AFB, WA

or North Aux Field, SC. The aircrew must ensure that demonstration training flights are coordinated and approved by the respective base's Current Operations, airfield management and the controlling airspace authority prior to execution. Demonstration training at all other locations must be approved by the 3 OG/CC in coordination with 3 OG/OGV.

### 6. Predeparture Actions.

- 6.1. Aircraft Commander Actions. Prior to home station departure, the aircraft commander will accomplish the following:
- 6.1.1. Receive a briefing on the event requirements from the scheduling OPR (e.g. Wing Current Operations). This briefing will cover, as a minimum, ORM, HQ PACAF/A3 aerial demonstration approval, latest aerial demonstration profiles (briefed by 3 OG/OGV) and an airshow point of contact.
- 6.1.2. Brief (as a minimum) the required copilot, safety observer and loadmaster duties for the aerial demonstration.
- 6.1.3. Give a concept briefing to the 3 OG/CC. As a minimum, include ORM and the intended demonstration profile to be flown. Be prepared to brief the 3 WG/CC as well, if requested.

### 7. Aerial Demonstration Restrictions.

- 7.1. Aerial demo ACs will fly from the left seat and aerial demo copilots will perform PNF duties from the right seat. Aerial demo copilots will not perform demonstration maneuvers as the Pilot Flying.
- 7.2. Acrial demo crews must practice their demo profile(s) within seven (7) calendar days of the acrial event. The practice profile may be flown at the aerial event's location to aid the crew in local orientation. If a practice profile cannot be assured at the location, the crew will fly it prior to departure from home station.
- 7.3. Crews will not perform any profile/maneuver that was not specifically practiced prior to the aerial event (e.g. crews that planned/practiced the 10 minute profile will not perform the 6 minute profile due to airshow time constraints).
- 7.4. Weather. The minimum weather requirements are at least a 2,500 foot ceiling and 5 statute miles visibility. Terrain and the nature of the event may dictate higher minimums. Higher minimums are at the discretion of the Aerial Demo AC.
- 7.5. Minimum Altitude. The minimum demonstration altitude is 1,000 feet AGL for formations; 1,000 feet AGL for single aircraft over congested areas; 500 feet AGL over non-congested areas and obstacles.
- 7.6. Maximum Speed. The maximum demonstration airspeed is 250 KCAS (300 KCAS with EAA or host nation aviation authority waiver – in writing or with appropriate authority's name) or VMMA, whichever is higher.
- Critique and Review of Flying Performances. Following aerial demonstrations, crews will
  ask for feedback regarding the performance IAW the PACAF CONOPS. Return completed
  feedback forms (Attachment 3) to 3 OG/OGV upon return to home station.

### MEMORANDUM FOR 11 AF/CC

FROM: 3 WG/CC

SUBJECT: C-17 Acrial Demo Team Review /Certification

ISSUE: The following crewmembers have successfully completed Phase I and Phase II of their training requirements for upgrade to the indicated crew position. I have personally interviewed each candidate and deem them worthy to represent the 3 WG, 11 AF, and PACAF during future C-17 aerial demonstrations.

| Ima Paine C-17 Demo Copile<br>Knot A. Freid C-17 Demo Safety | Observer       |
|--------------------------------------------------------------|----------------|
| Knowl A Frest                                                | 17 Demo Safety |

RECOMMENDATIONS: 1 recommend these individuals for upgrade to the appropriate aerial demonstration crew position.

FIGHT E.R. PILOT, Brigadier General, USAF Commander, 3rd Wing

1st Ind. 11 AF/CC

MEMORANDUM FOR 3 WG/CC

All crew members listed above are certified to fly in the stated crew position.

MISTER A. LASKA, Lieutenant General, USAF Commander

### Attachment 3

|                                                     | ### O2. 3WG AERIAL DEMONSTRATION CHECKLIST

3WG Aarni Demonstration Chackist cte-17a-tcl-1-5 REV 34)

Assaul demoins ration profiles use intermetly technique-oriented. The checklist is an ast to the profile and may be missible to sur the structure and the desires of the amount communication in intended to minimize CAWS elems and restraneous switchology white airborne.

### BEFORE TAKEOFF

- 1. Brakes, Steering "CHECKED" (PM, PF)
  2. Flight Instruments "CHECKED" (PM, PF)
- 1. Spoilers Switch -- "ARM" (PM)
- Anno At Regionser (PM) Commerce System As Regions (PM) SPE FOR A "AS REQUIRED" (PM)
- 7. PROBE Heat Switchlights --- "ON" (PM)
- B. WAP -- " CHECKED" (PM, PF)
  9. Loadmaster's Report -- "CHECK
- COMPLETED" (LM)

  10. Before Takeoff Checklist --- "COMPLETED"

- FOLLOWING BEFORE TAKEOFF 1. GPWS Tactical (CP) 2. TOLD "Checked" (P,CP,S)
- MAX REV selected
   Determine 1/2 and LND ground roll
   Displays "Set" (P.CP)

- J. Displays "Set" (P.GP)

  PAP displayed to both nurways

  PFP selected

  Take-off TOLD displayed on MCD 18.3

  Landing TOLD displayed on MCD 28.4

  A AFCS Panel "Set" (P.CP)

- Initial heading set
  Bug original Vinco
  Armed all > 2,000° above demo all
  5. TCAS/TAWS\_OFF (CP)
- 6. RA/BA Switch As Desired (P,CP) 7. Altimeters "As Required" (P,CP)
- Set QNE or QNH as desired 8. Ignition Switch A&S (CP)
- 9. Outflow Valve ManiFull Open (CP) 10. Demo Checklist "Complete" (CP,S)

### LINEUP

- 2. Stats/Flaps "SLATS EXTEND, FLAPS 1/2, INDEX " (PM, S)
- za. Spoifers Arm (PM) 2b. Anti-Ice Off (PM) 3. TOGA Mode -- Engaged (PM)
- Hydraulic Reservoir Temperatures —
   Checked (PM)
- 5. Exterior Lights As Required (PM) 6. IFF As Required (PM)
- 7. Lineup Checklist "COMPLETED" (PM)

1. Approach Mode -- "ENGAGED" (PM)

- 1 formeter Lighton "All RECORRED" (PM) 3 American " (PM, PP) 4 Cubin Pressorization Obecard (PM)
- 5. TOLD -- "CHECKED" (PM, S) 6. BTMS/VBO LDG DIST -Checked/Adjusted(PM)
- 7. Flap Index --- "SET" (PM) 8. Thrust Rating -- "AS REGUIRED" (PM)

# b. Come Scholing. — COMPLETED (PT) 16. TANKS — AS REQUIRED (PM) 16. VARY — CONCORED (PM, PT) 16. Debauting System — As Required (PM)

- 13. Loadmaster's Report "CHECK COMP" (LM) 14. Approach Checklist "COMPLETED" (PM)

- BEFORE LANDING

  1. Slats/Flaps "SLATS EXTEND, FLAPS INDEX." (PM, S)

  2. Landing Gear "DOWN" (PM, S)

  3. Spoilers Switch "ARM" (PM)

  Librorials state— As reserved PM;

  5. Loadmaster's Report "CHECK COMPLETED" (LM)

- 6, Before Landing Check -\*COMPLETED\*(FM)

- AFTER LANDING

  1. Flaps/Slats UP/RET (PM)

  2. Spoilers Switch Dearmed (PM)

- 3. IFF STBY (PM) 4. SKE As Required (PM) 5. Radar "OFF" (PM) 6. Pressurization Depressurized (PM)

### 7. IRCM IRCM Mode Control Knob -- STBY (PM)

- Exterior Lights As Required (PM)
   Gargo Door & Ramp "AS REQUIRED" (PF)
   Outboard Engines As Required (PF)
- 11. After Landing Check "COMPLETED" (PM)

- FOLLOWING BEFORE LANDING
  1. Landing/Taxi Lights EXT/ON (CP)
  2. Engine Anti-Ice ON (CP)
  3. "Gear Down" Call COMPLETED (CP)

### AFTER TOUCHDOWN

- "80 knots
- (P) UP/RET (CP)
- Flaps/Stats UP/RET (CF
   Spoilers Disarmed (CP)
- Troop Door CPEN (LM) WAP Checked (CP.S)

- FULL STOP TAXI-BACK
  1 Haparison OFVELT PRO
  1 60 SCRIX (Pal.
  2 50C As Resigned Prop.
  4 8LCXS 17 we NOUT FOR MIC Response
  Introduction As Resigned
- 4a. Primary Flight Plan Clear
- 4b. Secondary Flight Plan Activate 4c. TOLD Input
- 5. Mission Computer Data --- "CHECKED" (PM.SI
- 6. TOGA Mode -- "ENGAGED" (PF)

- 7. Thrust Rating "SET" (PM) 8. Flap Index "SET" (PM) 9. Stabilizer, Rudder, and Alleron Trim " DEGREES, 9, 0" (PM, 8)
- NEW VERNEL CONTROL OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE
- \$4. Full Stop Taxi-Back Checklist ---
- COMPLETED"(PM)

- FOLLOWING DEMONSTRATION
  1. Outflow Valve "Auto" (CP)
  2. RA/BA Switch As Required (P,CP)
  3. Altimeters " (P, CP)
- Altimeters " (P. CP)
   TCAS/TAWS/GPWS As Required (CP)
- 5. Ignition Switch As Required (CP)

### FOR OFFICIAL USE ONLY

PACAF Concept of Operations (CONOPS) Implementing AFI 11-246, Volume 6, Air Force Aircraft Demonstrations (C-17, C-130, C/KC/NKC-135, UH-1)

SUPERSEDES: NONE

### REFERENCES:

- + HQ USAF/CV message 20020305. Designation of MAJCOM OPRs for Aerial Demonstration Teams;
- AFI 11-246, Volume 6, Air Force Aircraft Demonstrations (C-17, C-130, C-141, C/KC/NKC-135, UH-1).
- BACKGROUND. HQ USAF/CV, in referenced message above, identified and directed lead MAJCOMs to establish AFI 11-246. Volume (Series 1 - 8), Air Force Aircraft Demonstrations, in order to standardize procedures for conducting aerial demonstrations. Additionally, MAJCOMs were tasked to establish procedures to certify pilots/aircraft commanders for aerial demonstration procedures. AF/XO tasked AMC to produce Volume 6. PACAF MAF aircraft will follow guidance in AFI 11-246 V6 and this CONOPS.
- 2. SITUATION. USAF/CV appointed AMC as lead MAJCOM to standardize aerial demonstration procedures for the following aircraft: C-5, C-9, C-12, C-17, C-20, C-21, C-22, C32, C-37, C-38, C-130, C-141, E-4, KC-10, KC-135, C-135, NKC-135, UH-1, and VC-25. From this listing. AMC selected the aircraft typically used in performing aircraft capabilities demonstrations—such as assault landing/takeoff, engine running offload, airdrop of personnel/equipment, hovering, etc.—and developed standardized aerial demonstrations for them. The selected aircraft are the C-17, C-141, C-130, KC-135 (including C/NKC-135), and UH-1 and the standardized aerial demonstrations, called "Standard Profiles," are published in AFI (1-246, Volume 6, Air Force Aircraft Demonstrations (C-17, C-130, C-141, C/KC/NKC135, UH-1). The Standard Profiles are referred to as Demonstration Standard Profiles, or simply, Demo Standard Profiles.
- DEMONSTRATION (DEMO) STANDARD PROFILES. The Demo Standard Profiles are compilations of basic aircraft flight and ground maneuvers sequenced to present the full range of aircraft capabilities to the audience. Demo Standard Profiles for the C-17, C-141, C-130, KC-135 (including C/NKC-135), and UH-1 are published in AFI 11-246, Volume 6. PACAF units

operating the applicable aircraft must adhere to the AMC developed Denso Standard Profiles. AFI 11-246, Vol 6, the Demo Standard Profiles and this CONOPS.

- 3.1. The WG/CC, or GP/CC, may restrict the flying performance of assigned aircrews participating in approved events to a degree greater than the Demo Standard Profiles, but may not authorize assigned aircrews to exceed Demo Standard Profile limitations.
- 3.2. Aircrews seeking to fly aerial demonstrations at approved events that differ from the Demo-Standard Profiles will follow the procedures in AFI 11-246, Vol.6, Para. 1.5, Non-Standard Profiles. PACAF/CC is the approval authority for non-standard profile requests. This authority may be delegated to PACAF/A3A5.
- 3.3. PACAF aircrews planning to fly a Demo Standard Profile at approved events must obtain participation approval IAW procedures in AFI 11-209, PACAF SUP1. When participation approval can be granted by the WG/CC, or GP/CC, ensure the SSS used for internal wing (group) coordination/approval states which Demo Standard Profile(s) will be flown and that the aircrew is certified. When participation approval authority rests with the MAJCOM/A3, the WG/CC will coordinate on the SSS and forward a Memorandum to the PACAF/A3A5 requesting participation approval. The Memorandum must state which Demo Standard Profile(s) will be flown and that the aircrew is certified.
- STATIC DISPLAY / FLYOVER / AERIAL REVIEW. Any aircraft covered by this CONOPS
  can be used for a static display presentation or to perform a flyover or aerial review for an approved
  event, contingent upon participation approval.
- 4.1. The HQ USAF/CV message referenced above did not mandate standard profiles for flyovers and aerial reviews—none have been developed. A PACAF aircrew intending to perform a flyover or aerial review at an approved event normally will plan a flight profile suitable for the hosting venue. The flight profile must comply with AFI 11-209, AFI 11-209, PACAF SUPL, and to all other applicable PACAF. Air Force and FAA guidance. In some cases, the hosting military organization or controlling Aerial Control Team may develop a detailed flyover or aerial review flight profile applicable to all participating aircraft—participating PACAF aircrews will ensure the flight profile is compatible with the PACAF procedures and guidelines for the operation of their aircraft.
- 4.2. A flight profile for a flyover or aerial review, whether created by the aircrew or by the bosting organization or ACT, must be approved. To accomplish this, use the normal process leading to participation approval found in AF111-209; 1) When participation approval can be granted by the WG/CC, ensure the SSS used for internal wing (group) coordination/approval presents a detailed description of the flight profile—the SQ/CC and OG/CC must coordinate; or, 2) When participation approval authority rests with the PACAF/A3A5, the WG/CC will coordinate on the internal SSS and forward a Memorandum to the PACAF/A3A5 requesting participation approval—the Memorandum must clearly describe the flight profile.
- AIRCREW CERTIFICATION PROCESS. PACAF Aircrews must be certified prior to performing Demo Standard Profiles at approved military or civilian events. PACAF/CC delegates

to NAF/CCs the authority to certify assigned Aircrews to fly the Demo Standard Profiles. The following procedures apply to Aircrew certification:

- 5.1. The WG/CC will establish the wing, certification process and select candidates from among assigned Aircrews for certification in the Demo Standard Profiles. The aircraft commander will be an instructor pilot. Each aerial demonstration crew members selected for certification will be assigned to a hard crew. Aerial demonstration crew members will do all of their training, certification and performances with their assigned hard crew. The minimum ground and flying training requirements leading to certification are delineated in the AMC/A37T training syllabit developed for the MDS aircraft used in performing the Demo Standard Profiles. The syllabit also serve as training folders, having sufficient space to document training progress. The syllabit include an example letter of certification. Document training IAW AFI 11-2(C/KC/H)-MDS, Vol 1. Certification should include four phases:
- 5.1.1. Phase One. Candidates become familiar with the relevant PACAF, AMC, USAF and FAA guidance for participation in military or civilian events such as base Open House celebrations or civilian air shows. Candidates must have a working knowledge of the following, at a minimum: AFI 11-209 and the PACAF SUP1, AFI 11-246. Vol 6 and this CONOPS, and AFI 11-202, Vol 3. The group standardization section will oversee Phase One.
- 5.1.2. Phase Two. Candidates fly the Demo Standard Profiles during training flights, demonstrating proficiency to a squadron, group or wing instructor pilot. The instructor pilot must be a pilot previously certified in the Demo Standard Profiles. Use the (syllabus) training folder for documenting training accomplishments.
- 5.1.3. Phase Three. The WG/CC personally interviews each candidate to assess overall suitability to fly the Demo Standard Profiles, and submits an endorsement memo recommending certification to the NAF/CC. The endorsement memo comes from the (syllabus) training folder and serves as proof of course completion prior to certification by the NAF/CC. The letter communicates successful completion of Phases One and Two. The WG/CC also annotates the wing's Review and Certification Board (RCB) minutes, recommending the candidate's certification.
- 5.1.4. Phase Four. The NAF/CC reviews a demonstration performance by each crew and certifies the entire crew by signing the endorsement memo. This memo will document aircrew certification and be maintained in the aircrew members FEF. In addition, Squadron CCs will document certification in the Letter of Xs.
- 5.2. PACAF/A3TV oversees the certification process for the Command through the ASEV program.
- 5.3. In the absence of an approved AMC/A37T or PACAF/A3T syllabus, wings will use locally developed Aircrew certification processes and send to PACAF/A3T for approval.
- CRITIQUE AND REVIEW OF FLYING PERFORMANCES. The WG/CC, will ensure that
  the flying performances of assigned, certified Aircrews flying the Demo Standard Profiles at
  approved military or civilian events are critiqued and reviewed (not applicable for flyovers or aerial

reviews) by the NAF/CC. The WG/CC, will identify a wing, OPR for this activity. At a minimum, the OPR will take the following actions:

- 6.1. For a military or civilian event at which an ACC aerial control team (ACT) controls the military aerial support, request the ACT team chief to provide feedback on the aircrew's flying performance as based on ground observations and other data, if available. Provide the ACT Team Chief the general and/or specific criteria to use in assessing aircrew performance and the name and the contact information for the wing POC to receive the feedback.
- 6.2. For a military Open House event, request the military officer controlling the aerial support for the event—the Air Boss—to provide feedback on the aircrews' flying performance as based on ground observations and other data, if available. Provide the Air Boss the general and/or specific criteria to use in assessing aircrew performance and the name and the contact information for the wing. POC to receive the feedback.
- 6.3. For an air show hosted on a non-DoD facility, request the civilian Air Boss to provide feedback on the aircrew's flying performance as based on ground observations and other data, if available. Provide the Air Boss the general and/or specific criteria to use in assessing aircrew performance and the name and the contact information for the wing, POC to receive the feedback.
- 6.4. If neither an ACT nor an on-scene ground supervisor (or Air Boss) is available, the MAJCOM can assign an additional pilot or navigator to the aircrew to perform an airborne critique and forward the results to the appropriate headquarters level.
- 6.5. If action taken in paragraphs 6.1, 6.2, 6.3 or 6.4, above, yields no feedback, the OG/CC, or GP/CC, will interview the aircrew upon the aircrew's return to home station to ascertain the aircrew's own assessment of flying performance during the Demo Standard Profile and forward the critique to the NAF/CC.
- 6.6. Flow feedback, positive and negative, through the WG/CC to the NAF/CC. Expect feedback based on ground observations to be, at best, imprecise and very general. While such feedback may have limited value, it may point to the need for wing or group leadership to take a closer look at aircrew performance from the perspective of flying safety.
- NEGATIVE FEEDBACK. The OG/CC will interview the aircrew involved when negative feedback is reported—the OG/CC will inform the WG/CC of all pertinent information. The WG/CC will assess the situation, take action as required and inform the NAE/CC if necessary.
- 8. GROUND AND FLYING SAFETY. Aircraft equipped with Defensive Systems (DS)—AN/ALE-47, AN/AAR-47 and AN/AAQ-24—will be "made-safe" before being placed on static display or before being flown to perform flyovers and aerial reviews. DS-equipped aircraft flown to perform serial demonstrations (Demo Standard Profiles or approved non-standard profiles) will normally be made safe prior to flight (for exceptions, see Para, 8.3, below).
- 8.1. Static Displays. To make-safe the AN/ALE-47, remove the Chaff/Flares, install all Electro Magnetic Interference (EMI) safety switch pins, position the Weigh-on-Wheels (WOW) switch (if

installed) to "Normal", and place the system in the "Off" mode. To make-safe the AN/AAR-47, position the WOW switch (if installed) to "Normal" and place the system in the "Off" mode. To make-safe the AN/AAQ-24, position the WOW switch (if installed) to "Normal," remove the User Data Module (UDM) or Maintenance User Data Module (MUDM), and place the system in the "Off" mode.

- 8.2. Flyovers and Aerial Reviews. DS-equipped aircraft participating in flyovers or aerial reviews will have all munitions (Chaff/Flares) removed from the aircraft prior to flight and the DS system switch (AN/ALE-47, AN/AAR-47 or AN/AAQ-24) positioned to the "Off" mode.
- 8.3. Aerial Demonstrations (Demo Standard Profiles or approved non-standard profiles). The following procedures apply:
- 8.3.1. As a general rule, DS-equipped aircraft participating in aerial demonstrations supporting approved military and civilian events—such as military Open House celebrations, civilian air shows for the general public, etc.—will have all munitions (Chall?Flares) removed from the aircraft prior to flight and the DS system switch (AN/ALE-47, AN/AAR-47 or AN/AAQ-24) positioned to the "Off" mode during flight.
- 8.3.2. PACAF may be tasked from time to time to participate in aerial demonstrations at approved military events using DS-equipped aircraft for the express purpose of demonstrating the DS equipment in operation during flight. Examples of such military events are the USAF CAPSTONE Aerospace Power Demonstration at Indian Springs NV or the USAF Air University Aerospace Power Demonstration at Eglin AFB FL. PACAF/A3AS approval is required anytime a PACAF DS-equipped aircraft will be used to demonstrate the operation of DS systems in flight, to expend DS munitions (Chaff/Fiares) in flight, or to fire DS laser equipment in flight as part of an aerial demonstration at an approved event. This requirement does not apply for PACAF DS-equipped aircraft operating DS systems in flight to support aerial demonstrations conducted as part of DoD sanctioned or directed programs or projects to test aircraft or aircraft systems.
- WAIVER AUTHORITY. PACAF/CC delegates waiver authority for this CONOPS to PACAF/A3A5.

AMC Concept of Operations (CONOPS) Implementing AFI 11-246, Volume 6, Air Force Aircraft Demonstrations (C-17, C-130, C-141, C/KC/NKC-135, UII-1)

This CONOPS is on the AMC web site: \_\_\_\_\_\_\_\_ The Short fille is The Vol 6 CONOPS. Once there, select "Aviation Support." The short fille is The Vol 6 CONOPS.

SUPERSEDES: NONE

### REFERENCES:

- HQ USAF/CV message 20020305. Designation of MAJCOM OPR's for Aerial Demonstration Teams;
- AFI 11-246, Volume 6, Air Force Aircraft Demonstrations (C-17, C-130, C-141, C/KC/NKC-135, UH-1).

NOTE: The phrase "group commander" (GP/CC) as used in this CONOPS means a group commander of an AMC group without a parent wing (i.e., 19 ARG/CC, 317 AG/CC, and 463 AG/CC).

- BACKGROUND, HQ USAF/CV, in referenced message above, identified and directed lead MAJCOMS to establish AFI 11-246. Volume (Series 1 - 8), Air Force Aircraft Demonstrations, in order to standardize procedures for conducting acrial demonstrations. Additionally, MAJCOMS were tasked to establish procedures to certify pilots/aircraft commanders for acrial demonstration procedures. AF/XO tasked AMC to produce Volume 6.
- 2. SITUATION. USAF/CV appointed AMC as lead MAJCOM to standardize acrial demonstration procedures for the following aircraft: C-5, C-9, C-12, C-17, C-20, C-21, C-22, C-32, C-37, C-38, C-130, C-141, E-4, KC-10, KC-135, C-135, NKC-135, UH-1, and VC-25. From this listing, AMC selected the aircraft typically used in performing aircraft capabilities demonstrations—such as assault landing/takeoff, engine running offload, airdrop of personnel/equipment, hovering, etc.—and developed standardized aerial demonstrations for them. The selected aircraft are the C-17, C-141, C-130, KC-135 (including C/NKC-135), and UH-1 and the standardized aerial demonstrations, called "Standard Profiles." are published in AlTI 11-246. Volume 6, Air Force Aircraft Demonstrations (C-17, C-130, C-141, C/KC/NKC-135, UH-1). Within AMC the Standard Profiles are referred to as Demonstration Standard Profiles, or simply. Demo Standard Profiles.
- 3. DEMONSTRATION (DEMO) STANDARD PROFILES. The AMC Demo Standard Profiles are compilations of basic aircraft flight and ground maneuvers sequenced to present the full range of aircraft capabilities to the audience. Demo Standard Profiles for the C-17, C-141, C-130, KC-135 (including C/NKC-135), and UH-1 are published in AFI 11-246, Volume 6. All MAJCOMS and all AMC units operating the applicable aircraft must adhere to the AMC-

developed Demo Standard Profiles. AFI 11-246, Vol 6, the Demo Standard Profiles and this CONOPS are posted to the AMC web site:

- 3.1. The WG/CC, or GP/CC, may restrict the flying performance of assigned aircrews participating in approved events to a degree greater than the Demo Standard Profiles, but may not authorize assigned aircrews to exceed Demo Standard Profile limitations.
- 3.2. Aircrews seeking to fly aerial demonstrations at approved events that differ from the Demo Standard Profiles will follow the procedures in AFI 11-246, Vol 6, Para. 1.5. Non-Standard Profiles. AMC/CC delegates participation approval authority to AMC/A3 for Non-Standard Profile requests.
- 3.3. AMC aircrews planning to fly a Demo Standard Profile at approved events must obtain participation approval IAW procedures in AFI 11-209, AMC SUP1. When participation approval can be granted by the WG/CC, or GP/CC, ensure the SSS used for internal wing (group) coordination/approval states which Demo Standard Profile(s) will be flown and that the aircrew is certified. When participation approval authority rests with the AMC/A3, the WG/CC (or, GP/CC) will coordinate on the SSS and forward a Mcmorandum to the AMC/A3 requesting participation approval. The Memorandum must state which Demo Standard Profile(s) will be flown and that the aircrew is certified.
- 4. STATIC DISPLAY / FLYOVER / AERIAL REVIEW. Any aircraft in the AMC inventory can be used for a static display presentation or to perform a flyover or aerial review for an approved event, contingent upon participation approval.
- 4.1. The HQ USAE/CV message referenced above did not mandate standard profiles for flyovers and aerial reviews—none have been developed. An AMC aircrew intending to perform a flyover or aerial review at an approved event normally will plan a flight profile suitable for the hosting venue. The flight profile must comply with AFI 11-209, AFI 11-209, AMC SUP1, and to all other applicable AMC, Air Force and FAA guidance. In some cases, the hosting military organization or controlling Aerial Control Team may develop a detailed flyover or aerial review flight profile applicable to all participating aircraft—participating AMC aircrews will ensure the flight profile is compatible with the AMC procedures and guidelines for the operation of their aircraft.
- 4.2. A flight profile for a flyover or aerial review, whether created by the aircrew or by the hosting organization or ACT, must be approved. To accomplish this, use the normal process leading to participation approval found in AF1 11-209: 1) When participation approval can be granted by the WG/CC, or GP/CC, ensure the SSS used for internal wing (group) coordination/approval presents a detailed description of the flight profile—the SQ/CC and OG/CC must coordinate; or, 2) When participation approval authority rests with the AMC/A3, the WG/CC (or, GP/CC) will coordinate on the internal SSS and forward a Memorandum to the AMC/A3 requesting participation approval—the Memorandum must clearly describe the flight profile.

- 5. PILOT CERTIFICATION PROCESS. AMC pilots must be certified prior to performing Demo Standard Profiles at approved military or civilian events. AMC/CC delegates to WG/CCs and GP/CCs the authority to certify assigned pilots to fly the Demo Standard Profiles. The following procedures apply to pilot certification:
- 5.1. The OG/CC or GP/CC will establish the wing, or group, certification process and select candidates from among assigned pilots for certification in the Demo Standard Profiles. The minimum ground and flying training requirements leading to certification are delincated in the AMC/A371 training syllabi developed for the MDS aircraft used in performing the Demo Standard Profiles. The syllabi will also serve as training folders, having sufficient space to document training progress. The syllabi include an example letter of certification. Document training IAW AFI 11-2(C/KC/H)-MDS, Vol.1. Certification should include four phases:
- 5.1.1. Phase One. Candidates become familiar with the relevant AMC, USAF and FAA guidance for participation in military or civilian events such as base Open House celebrations or civilian air shows. Candidates must have a working knowledge of the following, at a minimum: AFL11-209 and the AMC SUP1, AFL11-246, Vol 6 and this CONOPS, and AFL11-202, Vol 3. The group or squadron standardization section will oversee Phase One.
- 5.1.2. Phase Two. Candidates fly the Demo Standard Profiles during training flights, demonstrating proficiency to a squadron, group or wing instructor pilot. The instructor pilot must be a pilot previously certified in the Demo Standard Profiles. Use the (syllabus) training folder for documenting training accomplishments.
- 5.1.3. Phase Three. The SQ/CC personally interviews each candidate to assess overall suitability to fly the Demo Standard Profiles, making a written recommendation for certification to the OG/CC, or GP/CC. The certification letter comes from the (syllabus) training folder and serves as proof of course completion prior to certification and documentation in the candidate's AF Form 1381, USAF Certificate of Aircrew Training. The letter communicates successful completion of Phases One and Two. The SQ/CC also annotates the unit's Review and Certification Board (RCB) minutes, recommending the candidate's certification.
- 5.1.4. Phase Four. The OG/CC, or GP/CC, certifies each candidate, by signing the candidate's AF Form 1381.
- $5.2.\ AMC/A37V$  oversees the certification process for the Command through the ASEV program.
- 5.3. In the absence of an approved AMC/A371 syllabus, AMC wings and groups are to continue using existing pilot certification processes.
- 6. CRITIQUE AND REVIEW OF FLYING PERFORMANCES. The WG/CC, or GP/CC, will ensure that the flying performances of assigned, certified pilots flying the Demo Standard Profiles at approved military or civilian events are critiqued and reviewed (not applicable for flyovers or aerial reviews). The WG/CC, or GP/CC, will identify a wing, or group, OPR for this activity. At a minimum, the OPR will take the following actions:

- 6.1. For a military or civilian event at which an ACC aerial control team.(ACT) controls the military aerial support, request the ACT team chief to provide feedback on the aircrew's flying performance as based on ground observations and other data, if available. Provide the ACT Team Chief the general and/or specific criteria to use in assessing aircrew performance and the name and the contact information for the wing or group POC to receive the feedback.
- 6.2. For a military Open House event, request the military officer controlling the aerial support for the event—the Air Boss—to provide feedback on the aircrews' flying performance as based on ground observations and other data, if available. Provide the Air Boss the general and/or specific criteria to use in assessing aircrew performance and the name and the contact information for the wing, or group, POC to receive the feedback.
- 6.3. For an air show hosted on a non-DoD facility, request the civilian Air Boss to provide feedback on the aircrew's flying performance as based on ground observations and other data, if available. Provide the Air Boss the general and/or specific criteria to use in assessing aircrew performance and the name and the contact information for the wing, or group, POC to receive the feedback.
  - 6.4. AMC/CC waives Paragraph 2.5.3 of AFI 11-246, Vol 6, 13 December 2002.
- 6.5. If action taken in paragraphs 6.1, 6.2 or 6.3, above, yields no feedback, the OG/CC, or GP/CC, will interview the aircrew upon the aircrew's return to home station to ascertain the aircrew's own assessment of flying performance during the Demo Standard Profile.
- 6.6. Flow feedback, positive and negative, to the OG/CC or GP/CC. Expect feedback based on ground observations to be, at best, imprecise and very general. As an example, feedback might consist of statements such as, "...the demonstration looked great...the aircraft doked really low crossing the show line" or, "...I thought the aircraft angle of bank was too great" etc. While such statements normally have limited value, they may point to the need for wing or group leadership to take a closer look at aircrew performance from the perspective of flying safety.
- NEGATIVE FEEDBACK. The OG/CC or GP/CC will interview the aircrew involved when
  negative feedback is reported—the OG/CC will apprise the WG/CC on all pertinent information.
  The WG/CC or GP/CC will assess the situation, take action as required and apprise AMC/A3, if
  the situation warrants.
- 8. GROUND AND FLYING SAFETY. Aircraft equipped with Defensive Systems (DS)—AN/ALE-47, AN/AAR-47 and AN/AAQ-24—will be "made-safe" before being placed on static display or before being flown to perform flyovers and acrial reviews. DS-equipped aircraft flown to perform aerial demonstrations (Demo Standard Profiles or approved non-standard profiles) will normally be made safe prior to flight (for exceptions, see Para. 8.3, below).
- 8.1. Static Displays. To make-safe the AN/ALE-47, remove the Chaff/Flares, install all Electro Magnetic Interference (FMI) safety switch pins, position the Weigh-on-Wheels (WOW)

switch (if installed) to "Normal", and place the system in the "Off" mode. To make-safe the AN/AAR-47, position the WOW switch (if installed) to "Normal" and place the system in the "Off" mode. To make-safe the AN/AAQ-24, position the WOW switch (if installed) to "Normal," remove the User Data Module (UDM) or Maintenance User Data Module (MUDM), and place the system in the "Off" mode.

- 8.2. Flyovers and Aerial Reviews. DS-equipped aircraft participating in flyovers or acrial reviews will have all munitions (Chaff/Flares) removed from the aircraft prior to flight and the DS system switch (AN/ALE-47, AN/AAR-47 or AN/AAQ-24) positioned to the "Off" mode.
- 8.3. Aerial Demonstrations (Demo Standard Profiles or approved non-standard profiles). The following procedures apply.
- 8.3.1. As a general rule, DS-equipped aircraft participating in aerial demonstrations supporting approved military and civilian events— such as military Open House celebrations, civilian air shows for the general public, etc.—will have all munitions (Chaff/Flares) removed from the aircraft prior to flight and the DS system switch (AN/ALE-47, AN/AAR-47 or AN/AAQ-24) positioned to the "Off" mode during flight.
- 8.3.2. AMC may be tasked from time to time to participate in aerial demonstrations at approved military events using DS-equipped aircraft for the express purpose of demonstration the DS equipment in operation during flight. Examples of such military events are the USAF CAPSTONE Aerospace Power Demonstration at Indian Springs NV or the USAF Air University Aerospace Power Demonstration at Eglin AFB FL. HQ AMC/A3 approval is always required anytime an AMC DS-equipped aircraft will be used to demonstrate the operation of DS systems in flight, to expend DS munitions (Chaff/Flares) in flight, or to fire DS laser equipment in flight as part of an aerial demonstration at an approved event. This requirement does not apply for AMC DS-equipped aircraft operating DS systems in flight to support aerial demonstrations conducted as part of DoD sanctioned or directed programs or projects to test aircraft or aircraft systems.
- 9. WAIVER AUTHORITY. HQ AMC/CC delegates waiver authority for this CONOPS to AMC/A3.
- 10. OPR: HQ AMC/A33. Contact AMC/A33O, POC

### O5. C-17 DEMONSTRATION PROFILES

AFI 11-246, VOL 6, Chapter 3 (13 December 2002) (Incorporates IC 2004-1)

# C-17 Standard Profiles 1 Thru 4

General Instructions: Aircrews from all MAJCOMs will adhere to the flying procedures in Profiles 1 through 4. Profiles 1, 2 and 3 are demonstrations of Aircraft High Performance Maneuvering.

Profile 3 Synopsis: This 12-minute profile is an aircraft capabilities demonstration consisting of a takeoff followed by a maximum performance climb (max performance climb angle) to 1,500° AGL. The C-17 then executes a 45° bank angle 80°/260° reversal turn descending to 500° AGL, aligning with the runway to perform a high-speed pass. Once past show center, the C-17 executes a 50° teardrop turn and reversal while climbing to 1,000° AGL. The aircraft is configured for landing with slats/full flaps and gear. The C-17 descends to 500° AGL for a slow-speed pass. At show center, the aircraw advances

the power setting to MAX and reconfigures the aircraft (gear/slats/half flaps). The aircraft performs a 50° teardrop turn while climbing to 1,000° AGL and then descends to 500° AGL for the third pass, once again aligned with the runway. At show center, the aircraft demonstrates a low-speed 360° turn. At the end of the turn, the aircraft continues down the runway and uses a 45° teardrop reversal climb to 1,000° end of the turn, the aircraft stop assault landing. The aircraft stops at show center and demonstrates a backing maneuver but does not do any turning while backing. After backing up an adequate distance (no turns), the aircraft executes a forward turn toward the crowd. This is followed by a turn to exit the runway. Approximate duration: 12 minutes.

2

The third demonstration depicted is the Assault Takeoff (Maximum Effort Takeoff). In this illustration, the assault takeoff follows the backing demonstration. The C-17 climbs with ½ flaps at maximum power, holding airspeed at or above Vinco to 5,000° AGL.

The procedures in these profiles are general guidelines. Mission planners may adjust them, for cause, to accommodate the requirements of the jump team or paratroopers (static line, HALO, etc.), the requirements of the equirements of the expirements of the drop zone or the unique requirements of the event, itself. Aircrews will not deviate from the mission plan except for safety considerations. Planning and mission execution must comply with AFI 11-2C-17, Vol 3, and other relevant DoD, USAF and FAA guidance.

### C-17A, 00-0173, 28 July 2010, AFSAS #692650

AFI 11-246, VOL 6, Chapter 3 (13 December 2002) (Incorporates IC 2004-1) 5

Narration for the C-17 Standard Profile 3 (12-Minute Demonstration): The following narrative is illustrative only—the narrator should edit it as needed to suit the venue for the event, the supporting C-17 unit, the mission plan for C-17 participation (scenario), and the audience.

Introduction — 45 Seconds Prior To Engine Run-Up For Takeoff: Good (morning / afternoon) ladies and gentlemen. I'm (Rank/Name) from the Air Force's (Wing) at (Base) Air Force Base (State). It's my pleasure this afternoon to describe for you today's flight demonstration by America's newest airlifter, the Boeing C-17 Globemaster III – the aircraft that ensures rapid global mobility for America.

The aircraft will takeoff performing a maximum angle climb, demonstrating its impressive power and the ability to depart an airport where enemy resistance is suspected. With a departure climb angle just over 25° nose up, the aircraft will reach over 1,500 feet before crossing the departure end of the rumway.

# AFI 11-246, VOL 6, Chapter 3 (13 December 2002) (Incorporates IC 2004-1) 7

After Takeoff: The pilots for today's demonstration are (Rank Name) and (Rank Name). The loadmaster is (Rank Name). This crew has a combined total of over (XX) thousand flying hours in various aircraft including (i.e., the C-5 Galaxy, C-141 Starlifter, C-130 Hercules, KC-10 Extender, KC-135 Stratotanker, B-52 Stratotortress, T-1 Jayhawk, T-38 Talon and T-37 Tweet).

As Jet Begins 80°/260° Maneuver: The C-17's first pass today will be a high-speed pass. After completing a tearshop maneuver to align with the runway, the crew will accelerate to 250 / 300 Knots [460 / 550 kilometers per hour] demonstrating the rapid strategic capability of the airplane.

The  $C_{-}U^{2}$  design includes 1) a modern computerized glass cockpit, 2) heads-up displays at both pilot stations, and 3) advanced cargo handling system—allowing it to operate with a crew half the size of current directly. Only three crewmembers are required to fly the  $C_{-}U^{2}$ . The aircraft's advanced design allows it to accomplish its entire mission with this minimum crew.

As Aircraft Approaches Show Center: Notice how quiet the C-1" is while passing show center. This gives the Globemaster a tactical advantage while flying low over hostile territory and is also environmentally friendly.

As Aircraft Begins 50° Teardrop: The C-17 provides a direct delivery capability that combines the intercontinental cargo carrying capabilities of large aircraft, such as the C-5 Galaxy and C-141 Starlifter, with the short runway capability of the much smaller C-130 Hercules. It can routinely land on runways only 3,000 feet [1,000 meters] long.

Four Pratt and Whitney F-11" engines power the C-1". These are the same engines used on the Boeing 75". Each engine delivers over 40,000 panals of thrust. This amount of thrust allows the Globemaster III to carry over 1"0,000 pounds ["5,000 kilograms] of cargo. The Range of the C-1" with this amount of cargo is 2,400 manifed miles [4,000 kilometers]. However, the C-1" can reach anywhere in the world, nonstop, using its air refueling capability.

Wings Level Inbound: As the aircraft passes, please notice the wing leading edge stats and large, powered-lift wing flaps. These devices change the shape of the C-17 wing, and are the key to its low final approach speed enabling this aircraft to land and stop in short distances.

On Go Around: The aircraft is now performing a go around maneuver using maximum power to demonstrate its ability to depart an airport where enemy resistance is suspected.

As Aircraft Begins 50° Teardrop Maneuver: The C-17 will now maneuver to show its ability to fly at slow speeds and demonstrate its advanced aerodynamics in action. The aircraft is performing a series of steep bank turns to maneuver for a low-speed pass and circle over the airfield.

Wings Level Inbound: And in case you're wondering how big it is, the wingspan (tip to tip) is about half the length of a football [soccerf field, the tail is over 5 stories tall. Empty the C-17 weighs almost 280 thousand pounds [127 thousand kilograms]. But with maximum cargo and fuel loaded, that gross weight rises to over a half a million pounds [266 thousand kilograms]. Notice the up-turned wing tips or winglets—these decrease aerodynamic drag and increase fuel economy. To give you a better idea of the aircraft's overall size, those winglets are over 9 feet [3 meters] tall!

# AFI 11-246, VOL 6, Chapter 3 (13 December 2002) (Incorporates IC 2004-1)

After Jet Completes First 90° Of The 360° Turn: The aircraft is extremely agile at both high and low speeds making it easy to operate in any tactical situation including the combat delivery capability of paratrooper or heavy equipment airdrop.

8

During The Last 90° of 360° Furn: The C-17 uses a quadruple redundant fly-by-wire system to run its flight controls. The fly-by-wire system means the aircraft's flight controls are electronically operated by inputs from the control sticks. There are four separate fight control computers, each of which can manage the entire system by itself. The computers continuously monitor the flight controls and each other. If there are any problems they automatically work around the disabled system. In addition to these features, the C-17 still has a mechanical back up.

As Aircraft Begins 45° Teardrop: The aircraft is maneuvering to demonstrate a full flap approach to a simulated short field ranway. This short field capability allows the C-17 Globemuster III to land at over 6,000 more airfields worldwide than currently available to the C-141 Starlifter, C-5 Galaxy, and commercial wide-body aircraft. In fact, during the NATO peacekeeping mission to Bosnia. C-17 crews airlifted nearly one-half of the total cargo in only one-fourth of the missions while boasting and impressive 96% reliability rate.

The C-17 you see today weighs almost 400 thousand pounds [200 thousand kilograms]. On final, its speed is approximately 120 miles [200 kilometers] per hour.

As Aircraft Turns Final: Approaching the end of the runway, the crew is simulating arrival to an airfield with hostile forces nearby. This approach tactic can also be used from very high altitude to avoid enemy fire.

The C-17 made its inaugural flight in September 1991. Since then the C-17 set over 20 world records including payload-to-altitude and time-to-climb records. McDonnell Douglas (now. Boeing) delivered the first operational C-17 to Charleston Air Force base in June of 1993.

When Fouchdown Is Assured (Otherwise Go To Go-Around Filler Material): Now the crew will demonstrate the very short landing distance of the C-17.

While Backing, But Out Of MAX Reverse: The aircraft is demonstrating a capability limited to a very few aircraft—the ability to routinely back under its own power. Ground manuscrability is extremely important when space is limited for off-load operations on a day-to-day basis.

As Aircraft Taxis Clear: All the maneuvers you have seen here today are representative of those flown by our operational aircrews everyday, as they provide the highly responsive and flexible nielificapubility for America...

Ladies and Gentlemen, this concludes today's demonstration of the C-17 Globemaster III and just same of its unique capabilities. On behalf of the men and women of the United States Air Force, (insert appropriate MAJCOM), and XX AFB, we thank you for being with us today. We hope you enjoyed this brief look at the C-17 Globemaster III, the United States Air Force's core airlifter and work horse, providing rapid global mobility for America—today, tomorrow, and throughout the 21st Century.

|----------------------|------------|

#### P5. ENVIRONMENTAL COSTS

The 673d Civil Engineering Squadron Environmental flight took initial soil samples from the area around the railroad tracks. Further sampling of the entire site has been put on hold pending completion of wreckage recovery. When the crash site is released by the investigation board, Joint Base Elmendorf-Richardson (JBER) Environmental technicians and Alaska Department of Environmental Conservation (ADEC) representatives will perform a site characterization through a pre-determined process of systematic sampling based on a grid, to determine the best course of action for immediate cleanup and/or long-term site reconstruction if further action is deemed necessary.

#### P6. STATEMENT OF DAMAGE TO PRIVATE PROPERTY

Approximately 50 yards of two sets of railroad tracks were damaged during the mishap.

### P7. TOTAL ESTIMATED COSTS

#### MEMORANDUM FOR PRESIDENT, AFI 51-503 ACCIDENT BOARD

FROM: Safety Investigation Board

SUBJECT: Inventory and Witness List, Class A Mishap, C-17A, 00-0173, 28 Jul 10

- 1. The following items are released to the AFI 51-503 Accident Investigation Board:
  - a. Part I of the Formal Safety Report of Subject Mishap (disc)
  - b. Inventory of File Plan (Attch 1)
  - c. Witness Log (Attch 2)
  - d. Off-Station Equipment list (Attch 3)
  - e. Aircraft wreckage (Hangar 5 at Elmendorf AFB, AK)
- 2. Please reply by endorsement below that you are in receipt of these items and take responsibility for their final disposition.

JOSEPH K. KIM, Brig Gen, USAF President, Safety Investigation Board

#### Attachment:

- 1. Inventory File Plan
- 2. Witness Log
- 3. Off-Station Equipment List

#### C-17A, 00-0173, 28 July 2010, AFSAS# 692650

1st Ind, President AFI 51-503 Accident Investigation Board

TO: President, Safety Investigation Board

Acknowledge receipt and responsibility for the above listed items.

CARLTON D. EVERHART II, Brig Gen, USAF President, AFI 51-503 Accident Investigation Board
