#### Examiner's Remarks:

A. Mission Description: The examinee flew as a wing-man on a four-ship medium-threat AI mission to the ETAC Range. Ingress to the target was at low-altitude via the VR-260MTR. The examinee reacted to a simulated AAA site along the route. A first-run low altitude attack was flown against a simulated Airfield with a simulated load of 2 X MK-84's. Actual load was 3 X BDU-33's. The examinee then flew a low-altitude egress and returned to Davis-Monthan AFB, AZ, for an ILS approach and full stop landing. Colonel was debriefed on the flight.

#### Weapons employment scores were:

|      | A. Mission Description: This mission was flown at the conclusion of Conversion Training in the F-16A B-Course Syllabus. Takeoff was performed on Runway 11L at Tucson International Airport and the Ruby Stereo was flown to the Ruby Training Area where the airwork included an AGSM, a loop, a cloverleaf, Horn Profile #3 and unusual attitude recoveries. The examinee proceeded to Libby Army Airfield for a PAR and an overhead SFO to low approaches, followed by a VFR overhead pattern to a touch and go on Runway 26. He then flew to Davis-Monthan AFB for a High TACAN penetration/approach to a low approach on Runway 30. The examinee returned to Tucson IAP for a VFR overhead pattern to a full stop landing on Runway 29R.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

#### AF FORM 8, MAY 85 CONTINUATION SHEET

#### IV. Examiners Remarks:

A. Mission Description: This mission was flown at the conclusion of Conversion Training in the F-16A B-Course Hybrid Syllabus. Takeoff was performed on Runway 11L at Tucson International Airport and the Ruby Stereo was flown to the Ruby Training Area where the airwork included an AGSM, a loop, a cloverleaf, Horn Profile #3 and unusual attitude recoveries. The examinee proceeded to Libby Army Airfield for two overhead SFO's to low approaches and a VFR overhead pattern to a touch and go on Runway 26. He then returned to Tucson IAP for a VFR overhead pattern to a full stop landing on Runway 11L.

#### B. Discrepancies.

1. Ground (EPE).

Area 21, Fuel Low/fuel Leak (Q-). With a fuel leak in the forward tank, MSO moved the Engine Feed Knob to forward instead of moving the Fuel Quantity Selector Switch out of NORM, as required by the checklist.

2. Flight.

Area 22, Emergency Approach/landing (U). Examinee flew below minimum airspeed on two SFO's, which resulted in a position from which a landing could not be safely executed. The FE directed both go-arounds on both SFO's.

- C. Recommended Additional Training.
  - 1. Ground (EPE). Examinee will brief his flight commander on the Fuel System to include all the functions of the Engine Feed Knob and the Fuel Quantity Selector Switch,
  - 2. Flight. Examinee will fly a C-X prior to the re-check.
- D. Additional Comments: The 148th FS/ADO attended the debrief.
- V. Reviewing Officer's Remarks
- VI. Approving Officer's Remarks
- VII. Additional Reviews

| Mesion Description.  Media objectives were evaluated, including CAT III LLS, engine out operations and nonstandard configuration. All terms observed age completed in a excellent manner. Special interest firms were evaluated and PAR procedures were verbally evaluated. Lt Col. 517AS/CC, was debriefed on the results of the evaluation.  Biscrepancies. None.  Recommended Additional Training. None.  Additional Comments. None.                                                                                                                                                   | IV.                                                                                                                                                               | COMMENTS                                                                                                                                                                                                                                                            |  |  |  |  |
| Mission Description.  MCP (lew this recurring QUAL/INSTM evaluation in the WST on an Elmendorf AFB local profile, tequired objectives were evaluated, including CAT II ILS, engine out operations and nonstrandard configuration. All items observed age completed in a excellent manner. Special interest times were evaluated and PAR procedures were verbally evaluated. LI Col. 517AS/CC, was debriefed on the results of the evaluation.  Biscrepancies. None.  Discrepancies. None.  Recommended Additional Training. None.  Additional Comments. None.                             | EXAMINER'S REMARKS:                                                                                                                                               |                                                                                                                                                                                                                                                                     |  |  |  |  |

| A. Mission Description. This MSN evaluation was briefed and flown as an over-the-shoulder evaluation with the evaluator in the jump seat of student sortie T5104. This local sortie consisted of an instrument takeoff and departure from Columbus AFB to the Pickwick MOA for area work. Due to deteriorating weather conditions at all transition bases, crew was unable to complete pattern operations and returned to KCBM. The student accomplished a full set of area work in the MOA. The student also performed an ILS approach/full-stop landing at KCBM. The examinee flew a steep turn for demonstration purposes. Instruction was evaluated during the mission and was both timely and appropriate. The 48 FTS/DO was debriefed. |
| B. Discrepancies. None.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| C. Recommended Additional Training. None.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

# AF FORM 8, MAY 85 CONTINUATION SHEET **EXAMINER'S REMARKS:** A. Mission Description. This INSTM/QUAL evaluation was briefed and flown as a local mission from Columbus AFB. The profile consisted of an instrument takeoff and departure to the Pickwicks MOA for area work and then to Millington Regional Jetport, TN for instrument approaches and VFR traffic patterns. Area work consisted of 30-flap traffic pattern stalls, vertical-S, unusual attitudes, and an asymmetric thrust demonstration. Instrument and VFR pattern work consisted of a single-engine ILS/single-engine missed approach, a full procedure GPS approach/touch-and-go, and several normal and emergency VFR patterns and landings. The evaluator flew a vertical-S and 0-flap pattern for error analysis and grading purposes. Instruction during the flight was both timely and appropriate. B. Discrepancies. None. C. Recommended Additional Training. None. D. Additional Comments. Area 19 and Area 106d. Airmanship and Ability to Instruct were COMMENDABLE.

# AF FORM 8, MAY 85 CONTINUATION SHEET EXAMINER'S REMARKS: A. Mission Description. This MSN evaluation was briefed and flown as an over-the-shoulder evaluation with the evaluator in the jump seat of student sortie T5201. This local sortie consisted of an instrument takeoff and departure from Columbus AFB to the Pickwick MOA for area work and then to Millington Regional Jetport, TN for transition work. The student accomplished a full set of area work in the MOA before proceeding to Millington Regional Jetport, TN. The student performed all combinations of normal and emergency VFR patterns/landings. The examinee flew a steep turn in the MOA for demonstration purposes. Instruction was evaluated during the mission and was both timely and appropriate. The 48 FTS/DO was debriefed. B. Discrepancies. None. C. Recommended Additional Training. None. D. Additional Comments. Area 16 and Area 106d. Risk Management/Decision-Making and Ability to Instruct were COMMENDABLE.

| EXAMINER'S REMARKS:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| A. Mission Description. This INSTM/QUAL evaluation was briefed and flown as a local mission from Columbus AFB. The profile consisted of an instrument takeoff and departure to the West MOA for area work and then to Key Fld, MS for instrument approaches and VFR traffic patterns. Area work consisted of 10-flap traffic pattern stalls, steep turns, unusual attitudes, and a yaw damper failure demonstration. Instrument and VFR pattern work consisted of a full procedure VOR circling approach/touch-and-go landing, a single-engine ILS/single-engine missed approach, and several normal and emergency VFR patterns and landings. The evaluator flew a 30-flap straight-in and a 30-flap tactical pattern for error analysis and grading purposes. Instruction during the flight was both timely and appropriate. The 48 FTS/CC attended the debrief. |
| B. Discrepancies. None.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| C. Recommended Additional Training. None.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| D. Additional Comments. Area 28 and Area 33. Flight Characteristics Demonstration and 30-Flap Pattern/Landing were COMMENDABLE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| A. Mission Description. This INFT INSTR/MSN evaluation was briefed and instructed as a local airdrop/transition sortic IAW AFI 11-202 Vol. 2, AFI 11-2T-1 Vol. 2, and the current T-1A PIT syllabus. All required items were accomplished. Maneuvers flown/instructed included an IFR wing interval takeoff/departure, formation low level, lead/wing airdrop procedures, lead/wing visual and offset, tactical overhead pattern/landing, flap retract demo, asymmetric thrust demo, steep turns, vertical-S, 30-flap traffic-pattern stalls/slow flight, ILS approach/landing, 30-flap pattern/go-around and landing, single-engine pattern/single-engine go-around, 10-flap pattern/landing, and a no-flap pattern/landing. Instruction was evaluated during the briefing, throughout the flight, and the debriefing. The FE flew a cross section of maneuvers to evaluate instruction and grading practices. Lt Col , 99 FTS/DO, was debriefed on the results. |
