How does the network pick up

(b)(6),(b)(7)(C) ? Can MIT Tell if (b)(6),(b)(7)(C) used to DHCP?

(b)(6),(b)(7)(C) = There were ~~with~~ occasions when AS did not use DHCP to obtain IP addresses.

SH can you tell if DHCP gave an IP?

(b)(6),(b)(7)(C)

6.240
7.240

No DHCP Records in Nov 2010

SH: 11/22 → 12/26 (b)(6),(b)(7)(C) was used.

(b)(6),(b)(7)(C) has some Sept 2010 Logs
For last dates of Logs

SH Just to be clear how many days we have DHCP Logs?

(b)(6),(b)(7)(C) Send to (b)(6),(b)(7)(C) for Distribution

Linux can set up

SH when you look for IP Ending .240

(b)(6),(b)(7)(C) found it by using ARP TABLE which is a Map for MAC Addresses & IP's

page

on system.

Address Resolution Protocol = ARP

ARP Table is what (b)(6),(b)(7)(C) used to find the IP Address using -240 & Matched the MAC Address.

MAC Addresses are used in local networks IP's used on Internet.

(b)(6),(b)(7)(C) → Yes it is.

SH → Is it a rule that you can enforce?
