C1. CHAPTER 1OVERVIEWC1.1. Scope and Applicability

C1.1.1. The primary purpose of these Final Governing Standards (FGS) is to provide specific standards for environmental protection at Department of Defense (DoD) installations, facilities, and activities in Greenland. It has been prepared by Headquarters United States Air Force Space Command (HQ AFSPC), as the DoD Environmental Executive Agent, to meet the requirements of DoD Instruction 4715.5. These FGS are based primarily upon the generally accepted environmental standards for DoD installations in the U.S., but also take into account U.S. legal obligations in Greenland as well as generally applicable host nation environmental standards. These FGS are designed to serve as a single and complete source of the environmental protection practices U.S. forces must follow at their installations in Greenland.

C1.1.2. The Greenland Home Rule (GHR) Authority has the primary role for environmental protection in Greenland. Base staff should coordinate all correspondence with the GHR Authority with AFSPC/CEV. Requests for environmental information from the GHR and Denmark should be coordinated with AFSPC/CEV. Base staff should notify AFSPC/CEV when either the GHR or Denmark access the base to do an environmental inspection. Also, the U.S. and Denmark have signed bilateral agreements which impose additional requirements on waste disposal. Base staff should notify AFSPC/CEV on waste disposal issues prior to contacting GHR, to ensure all U.S. treaty obligations are met.

C1.1.3. This publication's predecessor, "Final Governing Standards for Environmental Protection by United States Forces in Greenland," September 1994, is hereby canceled.

C1.1.4. These FGS are effective upon issuance and are mandatory by all DoD Components, pursuant to DoD Instruction 4715.5. Each component with personnel stationed in a foreign country has issued the appropriate regulations to make compliance with these standards an enforceable military duty. The Heads of the DoD Components may only issue supplementary standards when deemed necessary to provide for unique requirements within their organizations.

C1.1.5. This document does not apply to:

C1.1.5.1. DoD installations that do not have more than de minimis potential to affect the natural environment (e.g., offices whose operations are primarily administrative, including defense attaché offices, security assistance offices, foreign buying offices and other similar organizations), or for which the DoD Components exercise control only on a temporary or intermittent basis.

C1.1.5.2. Leased, joint use and similar facilities to the extent that DoD does not control the instrumentality or operation that a criterion seeks to regulate.

C1.1.5.3. Operations of U.S. military vessels or the operations of U.S. military aircraft, or off-installation operational and training deployments. Off-installation operational deployments include cases of hostilities, contingency operations in hazardous areas, and when United States forces are operating as part of a multi-national force not under full control of the United States. Such excepted operations and deployments shall be conducted in accordance with applicable international agreements, other DoD Directives and Instructions, and environmental annexes incorporated into operation plans or operation orders. However, these Standards apply to support functions for U.S. military vessels and U.S. military

aircraft provided by the DoD Components, including management or disposal of off-loaded waste or material;

C1.1.5.4. Facilities and activities associated with the Naval Nuclear Propulsion Program, which are covered under E.O. 12344 and conducted pursuant to 42 U.S.C. 7158;

C1.1.5.5. The determination or conduct of remediation to correct environmental problems caused by DoD's past activities, conducted in accordance with DoD Instruction 4715.8; and,

C1.1.5.6. Environmental analyses conducted under E.O. 12114.

C1.2. Definitions

For purposes of these FGS, unless otherwise indicated, the following definitions apply:

C1.2.1. Existing facility. Any facility and/or building, source or project in use or under construction before 1 October 1994, unless it is subsequently substantially modified.

C1.2.2. Environmental Executive Agent. United States Air Force Space Command (AFSPC), Peterson AFB, Colorado Springs, USA.

C1.2.3. Host Nation. Throughout this document the term "host nation" refers to Greenland.

C1.2.4. New Facility. Any facility and/or building, source or project with a construction start date on, or after, 1 October 1994, or a pre-existing facility that has been substantially modified since 1 October 1994.

C1.2.5. Substantial Modification. Any modification to a facility and/or building the cost of which exceeds \$1 million, regardless of funding source.

C1.3. Testing. Testing is often called for in the FGS. When no specific testing protocol is specified, any Danish or U.S. method recognized by appropriate professional or technical organizations may be used. When a specific method is called for, that method will be used unless the Environmental Executive Agent approves an alternate method. Laboratory analyses necessary to implement the FGS should normally be conducted in a laboratory that has been certified by a U.S. or Danish authority for the applicable test method. In the absence of a laboratory that has been so certified, laboratory analyses may also be conducted at a laboratory that has established reliable compliance with quality assurance standards for the applicable test method that are generally recognized by appropriate industry or scientific organizations.

C1.4. Responsibilities. The responsibilities for developing and maintaining these FGS are described below. These responsibilities are further outlined in DoD Instruction 4715.5.

C1.4.1. Headquarters European Command (EUCOM) will:

C1.4.1.1. Approve the FGS document; and

C1.4.1.2. Resolve any disputes between other DoD Components and the DoD Environmental Executive Agent regarding the FGS.

C1.4.2. The DoD Environmental Executive Agent for Greenland, HQ AFSPC, will:

C1.4.2.1. Develop and maintain the FGS in accordance with DoD Instruction 4715.5;

C1.4.2.2. Distribute the FGS and any subsequent amendments or guidance to the service components and DoD agencies with installations in Greenland;

C1.4.2.3. Forward a copy of revised FGS via EUCOM to the Military Departments and the Deputy Under Secretary of Defense for Installations and Environment [DUSD(IE)] for information;

C1.4.2.4. Consult with host nation authorities on environmental issues, as required to maintain effective cooperation on environmental matters;

C1.4.2.5. Resolve requests for waivers from DoD Components; and

C1.4.2.6. Keep DoD Components informed of current environmental developments and trends.

C1.4.3. DoD Components will:

C1.4.3.1. Ensure that actions by DoD Components at installations in Greenland, as well as planning, budgeting, programming, and execution, comply with these standards;

C1.4.3.2. Designate Component Commanders or other officials who are authorized to apply for waivers or initiate appeals; and

C1.4.3.3. Attain compliance with the FGS using pollution prevention as the preferred means where economically advantageous and consistent with mission requirements.

C1.5. Waivers. If compliance with these FGS at particular installations or facilities would seriously impair operations, adversely affect relations with Greenland authorities, or require substantial expenditure of funds at an installation that has been identified for closure or at an installation that has been identified for a realignment that would remove the requirement, a DoD Component may ask the Environmental Executive Agent to waive the particular standard. Waivers are not required if compliance projects have been programmed by the service components but remain unfunded. Waivers may not be granted to standards if noncompliance would constitute a breach of applicable U.S. law with extraterritorial effect or applicable international agreements. A description of the waiver process is provided below. These procedures are further outlined in DoD Instruction 4715.5 and EUCOM Directive 80-1.

C1.5.1. The installation commander will forward waiver requests to the Environmental Executive Agent via the Component chain of command. Waiver requests should specify, at a minimum:

C1.5.1.1. The particular standard for which a waiver is requested;

C1.5.1.2. The extent of the relief requested and the period that the waiver will be in effect;

C1.5.1.3. The anticipated impact of the waiver, if any, on human health and the environment or relations with Greenland authorities over the period of the waiver; and

C1.5.1.4. The justification for the waiver and if a complete waiver of the standard is requested, why a partial and/or temporary deviation would not be sufficient.

C1.5.2. The Environmental Executive Agent will consult with the relevant DoD Components and USEUCOM and grant or deny the request for waiver in whole, in part, or conditionally. Waivers may require periodic reviews and reporting. Where the waiver or deviation is from a host nation standard, the DoD Environmental Executive Agent should normally consult through the appropriate U.S. Diplomatic

Mission (or other agencies established by applicable international agreements) with the responsible host nation authority.

C1.5.3. In the event the EEA denies a waiver, the DoD Component may appeal to DUSD(IE) for reconsideration.

C1.6. General Provisions. These FGS do not create any rights or obligations enforceable against the United States, the DoD, or any of its components, nor does it create any standard of care or practice for individuals. Although the FGS refers to other DoD Directives and Instructions, it is intended only to coordinate the requirements of those directives as required to implement the policies found in DoD Instruction 4715.5. These FGS do not change other DoD Directives or Instructions or alter DoD policies.

C1.7. Environmental Executive Agent

C1.7.1. The DoD Environmental Executive Agent for these FGS is the HQ AFSPC Civil Engineer. Waiver requests should be sent to:

The AFSPC Civil Engineer
150 Vandenberg Street, Suite 1105
Peterson AFB, CO 80914-4150

C1.7.2. Questions or comments pertaining to this FGS should be directed to the HQ AFSPC/CEV staff at:

Foreign Country Environmental Programs Manager
HQ AFSPC/CEVC
150 Vandenberg Street, Suite 1105
Peterson AFB, CO 80914-4150

Telephone:
DSN: 692-5291
Commercial: (719) 554-5291

Fax:
DSN: 692-3849
Commercial: (719) 554-3849

C1.7.3. These FGS are available on the DoD Internet address: www.denix.osd.mil.

C2. CHAPTER 2AIR EMISSIONSC2.1. Scope

This Chapter contains standards for air emissions sources. Criteria addressing open burning of “Solid Waste” are contained in Chapter 7, “Spill Prevention and Response Plans” in Chapter 18, and “Radon” in Chapter 16 (RESERVED).

C2.2. Definitions

C2.2.1. Coal Refuse. Waste products of coal mining, cleanings and coal preparation operations (e.g., culm, gob, etc.) containing coal, matrix material, clay, and other organic and inorganic material.

C2.2.2. Cold Cleaning Machine. Any device or piece of equipment that contains and/or uses liquid solvent, into which parts are placed to remove soils and other contaminants from the surfaces of the parts or to dry the parts. Cleaning machines that contain and use heated, nonboiling solvent to clean the parts are classified as cold cleaning machines.

C2.2.3. Fossil Fuel. Natural gas, petroleum, coal, and any form of solid, liquid or gaseous fuel derived from such material for the purpose of creating useful heat.

C2.2.4. Freeboard Ratio. The ratio of the solvent cleaning machine freeboard height to the smaller interior dimension (length, width, or diameter) of the solvent cleaning machine.

C2.2.5. Incinerator. Any furnace used in the process of burning solid or liquid waste for the purpose of reducing the volume of the waste by removing combustible matter, including equipment with heat recovery systems for either hot water or steam generation.

C2.2.6. Motor Vehicle. Any commercially-available vehicle that is not adapted to military use which is self-propelled and designed for transporting persons or property on a street or highway, including but not limited to passenger cars, light duty vehicles, and heavy duty vehicles.

C2.2.7. New Source. Any facility/building, source or project with a construction start date on, or after, 1 October 1994, or a pre-existing facility that has been substantially modified since 1 October 1994.

C2.2.8. Ozone-Depleting Substances (ODS). Those substances listed in Table C2.T2.

C2.2.9. Pathological Waste. Waste material consisting of only human or animal remains, anatomical parts, and/or tissue, the bags/containers used to collect and transport the waste material, and animal bedding (if applicable).

C2.2.10. Process Heater. A device that is primarily used to heat a material to initiate or promote a chemical reaction in which the material participates as a reactant or catalyst.

C2.2.11. Pyrolysis. The endothermic gasification of hospital waste and/or medical/infectious waste using external energy.

C2.2.12. Steam generating unit. A device that combusts any fuel and produces steam or heats water or any other heat transfer medium. This definition does not include nuclear steam generators or process heaters.

C2.2.13. Substantially-Modified. Any modification to a facility/building the cost of which exceeds \$1 million, regardless of funding source.

C2.2.14. Vapor Cleaning Machine. A batch or in-line solvent cleaning machine that boils liquid solvent generating solvent vapor that is used as a part of the cleaning or drying cycle.

C2.2.15. Wood Residue. Bark, sawdust, slabs, chips, shavings, mill trim, and other wood products derived from wood processing and forest management operations.

C2.3. Criteria

C2.3.1. Steam/Hot Water Generating Units

C2.3.1.1. Air Emission Standards for New or Substantially Modified (N/SM) Units. The following criteria apply to N/SM units with a maximum design heat input capacity greater or equal to 10 million Btu/hr.

C2.3.1.1.1. N/SM steam/hot water generating units and associated emissions controls, if applicable, must be designed to meet the emission standards for specific sized units shown in Table C2.T1. At all times, except during periods of start up, shut down, soot blowing, malfunction, or when emergency conditions exist.

C2.3.1.1.2. For N/SM units combusting liquid or solid fossil fuels, fuel sulfur content (weight percent) and higher heating value will be measured and recorded for each new shipment of fuel. Use this data to calculate sulfur dioxide (SO₂) emissions and document compliance with the SO₂ limits using the equation in Table C2.T1. Alternatively, install a properly calibrated and maintained continuous emissions monitoring system to measure the flue gas for SO₂ and either oxygen (O₂) or carbon dioxide (CO₂).

C2.3.1.2. Air Emissions Monitoring for N/SM Units. N/SM steam/hot water generating units subject to opacity or NO_x standards in C2.T1. must have a properly calibrated and maintained continuous emissions monitoring system (CEMS) to measure the flue gas as follows:

C2.3.1.2.1. For units with a maximum design heat input capacity greater than 30 million Btu/hr: Opacity, except that CEMS is not required where gaseous or distillate fuels are the only fuels combusted.

C2.3.1.2.2. For fossil-fuel fired units with a maximum design heat input capacity greater than 100 million Btu/hr: Nitrogen oxides (NO_x) and either oxygen (O₂) or carbon dioxide (CO₂).

C2.3.2. Incinerators. The following requirements do not apply to incinerators combusting hazardous waste, or munitions. Refer to Chapter 6 for information regarding hazardous waste disposal.

C2.3.2.1. Incinerators (Non-medical). All N/SM incinerators that have the capacity to burn more than 50 tons per day (tpd) must be designed to meet the following particulate standard: 0.18 grams per dry standard cubic meter (g/dscm) (0.08 grains per dry standard cubic foot (gr/dscf)) corrected to 12 percent CO₂.

C2.3.2.2. Sewage Sludge Incinerators. All N/SM sewage sludge incinerators that burn more than 1 tpd of sewage sludge or more than 10% sewage sludge must also be designed to meet a particulate emission limit of 0.65 g/kg dry sludge (1.30 lb/ton dry sludge) and an opacity limit of 20% at all times, except during periods of start up, shut down, malfunction, or when emergency conditions exist.

C2.3.2.3. Medical Waste Incinerators (MWI). The following standards apply to new and existing units. These requirements do not apply to any portable units (field deployable), pyrolysis units, or units that burn only pathological, low-level radioactive waste, or chemotherapeutic waste. Existing sources must comply by 15 March 2005. Refer to Chapter 8 for other requirements pertaining to medical waste management.

C2.3.2.3.1. All new and existing MWI must be designed and operated according to the following good combustion practices (GCP).

C2.3.2.3.1.1. Unit design: dual chamber

C2.3.2.3.1.2. Minimum temperature in primary chamber: 1400-1600°F.

C2.3.2.3.1.3. Minimum temperature in secondary chamber: 1800-2200°F.

C2.3.2.3.1.4. Minimum residence time in the secondary chamber: 2 seconds.

C2.3.2.3.1.5. Incinerator operators must be trained in accordance with applicable Service requirements.

C2.3.3. Perchloroethylene (PCE) Dry Cleaning Machines. The following requirements apply to new and existing dry cleaning machines. These requirements do not apply to coin-operated machines. Existing sources must comply by 15 March 2003.

C2.3.3.1. Emissions from existing PCE dry cleaning machines, at installations that use more than 2000 gallons per year of PCE (installation wide) in their dry cleaning operations, must be controlled with a refrigerated condenser, or, if already installed, a carbon absorber. The temperature of the refrigerated condenser must be maintained at 45°F or less. Dry cleaning machines and control devices must be operated according to manufacturer recommendations.

C2.3.3.2. All new PCE dry cleaning systems must be of the dry-to-dry design with emissions controlled by a refrigerated condenser. The temperature of the refrigerated condenser must be maintained at 45°F or less. Dry cleaning machines and control devices must be operated according to manufacturer recommendations.

C2.3.4. Chromium Electroplating and Chromium Anodizing Tanks. The following standards apply to new and existing tanks. Existing sources must comply by 15 March 2003.

C2.3.4.1. Ventilation exhaust from new and existing tanks must be controlled by a wet scrubber, composite mesh-pad eliminator, fiber bed filter, or equivalent control device capable of limiting emissions to 0.015 milligrams per dry standard cubic meter (mg/dscm). Control devices must be operated according to manufacturer recommendations.

C2.3.4.2. Alternatively, in lieu of control devices, decorative chromium and chromium anodize tanks may use chemical tank additives to prevent the surface tension from exceeding 45 dynes per

centimeter provided that the surface tension is monitored prior to the first initiation of electric current on a given day and every 4 hours thereafter.

C2.3.5. Halogenated Solvent Cleaning Machines. These requirements apply to new and existing solvent cleaning machines that use solvent which contains more than 5 percent by weight: methylene chloride (CAS No. 75-09-2), perchloroethylene (CAS No. 127-18-4), trichloroethylene (CAS No. 79-01-6), 1,1,1-trichloroethane (CAS No. 71-55-6), carbon tetrachloride (CAS No. 56-23-5), chloroform (CAS No. 67-66-3), or any combination of these halogenated solvents. Existing sources must comply by 15 March 2003. (Note: 1,1,1-trichloroethane is an ozone depleting substance that will eventually be phased out of existence.)

C2.3.5.1. All cold cleaning machines (remote reservoir and immersion tanks) must be covered when not in use. Additionally immersion type cold cleaning machines must have either a 1" water layer or a freeboard ratio of at least 0.75.

C2.3.5.2. All vapor cleaning machines (vapor degreasers) must incorporate design and work practices which minimize the direct release of halogenated solvent to the atmosphere.

C2.3.6. Units Containing an Ozone Depleting Substance (ODS) Listed in Table C2.T2. The following criteria apply to direct atmospheric emissions of ODS from refrigeration and fire suppression equipment.

C2.3.6.1. ODS Refrigerant Recovery/Recycling. All repairs or services to appliances, industrial process refrigeration units, air conditioning units, or motor vehicle air conditioners must be performed using commercially available refrigerant recovery/recycling equipment, operated by trained personnel.

C2.3.6.2. ODS Refrigerant Venting Prohibition. Do not intentionally release any class I or class II ODS refrigerant in the course of maintaining, servicing, repairing, or disposing of appliances, industrial process refrigeration units, air conditioning units, or motor vehicle air conditioners. *De minimis* releases associated with good faith attempts to recycle or recover ODS refrigerants are not subject to this prohibition.

C2.3.6.3. ODS Fire Suppression Agent (Halon) Venting Prohibition. Do not intentionally release halons into the environment while testing, maintaining, servicing, repairing, or disposing of halon-containing equipment or using such equipment for technician training. This venting prohibition does *not* apply to the following halon releases:

C2.3.6.3.1. *De minimis* releases associated with good faith attempts to recycle or recover halons (i.e., release of residual halon contained in fully discharged total flooding fire extinguishing systems).

C2.3.6.3.2. Emergency releases for the legitimate purpose of fire extinguishing, explosion inertion, or other emergency applications for which the equipment or systems were designed.

C2.3.6.3.3. Releases during the testing of fire extinguishing systems if each of the following is true: systems or equipment employing suitable alternative fire extinguishing agents are not available; release of extinguishing agent is essential to demonstrate equipment functionality; failure of system or equipment would pose great risk to human safety or the environment; and, a simulant agent cannot be used.

C2.3.7. Motor vehicles. This criteria applies to DoD-owned motor vehicles as defined in paragraph C2.2.6.

C2.3.7.1. Inspect all vehicles every two years to ensure that no one has tampered with the factory-installed emission control equipment.

C2.3.7.2. If available on the local economy, use only unleaded gasoline in vehicles that are designed for this fuel.

Table C2.T1. Emission Standards for N/SM Steam Generating Units^a

Fuel Type	Maximum Design Heat Input Capacity						
	10 – 100 million BTU/hr			Size >100 million BTU/hr			
	PM	Opacity ^b	SO ₂ ^c	PM	Opacity ^b	SO ₂ ^c	NO _x ^d
Gaseous	N/A	N/A	N/A	N/A	N/A	N/A	0.20
Gaseous - Coal Derived	N/A	N/A	N/A	N/A	N/A	N/A	0.50
Liquid Fossil Fuel	N/A	20%	0.50 ^e	0.10	20%	0.80	0.30
Solid Fossil Fuel	0.10	20%	1.20	0.10	20%	1.20	0.70
Other Solid Fuel ^f	0.30	20%	N/A	0.20	20%	N/A	N/A

N/A = Not applicable.

^a. Standards do not apply during periods of startup, shutdown, malfunction, soot blowing, or when emergency conditions exist. Unless specified otherwise, emission standards are in lb/million BTU.

^b. The opacity standards do not apply to units < 30 million BTU/hr. The 20% standard applies to the average opacity over a six-minute period. A 30% opacity value is allowed for one six-minute period per hour.

^c. SO₂ is best controlled and compliance documented by limiting fuel sulfur content.

SO₂ emissions (lb/ million BTU) = 0.02 X sulfur content of fuel (%) / heat content of fuel (HHV, million BTU/lb fuel).

[E.g., for fuel oil with 0.5% sulfur, SO₂ = 0.02 X 0.5 / 0.019 = 0.53 lb/million BTU.]

^d. Emission limitation for NO_x is based on a 30-day rolling average. NO_x standard does not apply when a fossil fuel containing at least 25% by weight of coal refuse is burned in combination with gaseous, liquid, or other solid fossil fuel.

^e. Instead of 0.5 lb/ million BTU of SO₂, fuel oil combustion units may comply with a 0.5% average fuel sulfur content limit (weight percent) which is statistically equivalent to 0.5 lb/million BTU.

^f. OTHER SOLID FUELS INCLUDE WOOD OR WASTE DERIVED

Table C2.T2. Class I and II Ozone Depleting Substances

Class I			
CFC - 11	CFC - 114	CFC - 215	Halon - 1211

C3. CHAPTER 3DRINKING WATERC3.1. Scope

This Chapter contains criteria for providing potable water.

C3.2. Definitions

C3.2.1. Action Level. The concentration of a substance in water that establishes appropriate treatment for a water system.

C3.2.2. Appropriate DoD Medical Authority. The medical professional designated by the in-theater component commander to be responsible for resolving medical issues necessary to provide safe drinking water at the component's installations.

C3.2.3. Community Water System (CWS). A public water system having at least 15 service connections used by year-round residents or which regularly serves at least 25 year-round residents.

C3.2.4. Concentration Time (CT). The product of residual disinfectant concentration, C, in mg/L determined before or at the first customer, and the corresponding disinfectant contact time, T, in minutes. CT values appear in Tables C3.T11 through C3.T24.

C3.2.5. Conventional Treatment. Water treatment including chemical coagulation, flocculation, sedimentation, and filtration.

C3.2.6. Diatomaceous Earth Filtration. A water treatment process of passing water through a precoat of diatomaceous earth deposited on a support membrane while additional diatomaceous earth is continuously added to the feed water to maintain the permeability of the precoat, resulting in substantial particulate removal from the water.

C3.2.7. Direct Filtration. Water treatment including chemical coagulation, possibly flocculation, and filtration, but not sedimentation.

C3.2.8. Disinfectant. Any oxidant, including but not limited to, chlorine, chlorine dioxide, chloramines, and ozone, intended to kill or inactivate pathogenic microorganisms in water, or ultraviolet (UV) light technologies with equivalent to or better performance than an oxidant.

C3.2.9. DoD Water System. A public water system or non-public water system.

C3.2.10. Emergency Assessment. An evaluation of the susceptibility of the water source, treatment, storage and distribution system(s) to disruption of service from natural disasters, accidents, and sabotage.

C3.2.11. First Draw Sample. A one-liter sample of tap water that has been standing in plumbing at least six hours and is collected without flushing the tap.

C3.2.12. Groundwater Under the Direct Influence of Surface Water (GWUDISW). Any water below the surface of the ground with significant occurrence of insects or other microorganisms, algae, or large diameter pathogens such as *Giardia lamblia*; or significant and relatively rapid shifts in water

characteristics, such as turbidity, temperature, conductivity, or pH, which closely correlate to climatological or surface water conditions.

C3.2.13. Lead-free. A maximum lead content of 0.2% for solder and flux, and 8.0% for pipes and fittings.

C3.2.14. Lead Service Line. A service line made of lead that connects the water main to the building inlet, and any lead pigtail, gooseneck, or other fitting that is connected to such line.

C3.2.15. Maximum Contaminant Level (MCL). The maximum permissible level of a contaminant in water that is delivered to the free-flowing outlet of the ultimate user of a public water system except for turbidity for which the maximum permissible level is measured after filtration. Contaminants added to the water under circumstances controlled by the user, except those resulting from the corrosion of piping and plumbing caused by water quality, are excluded.

C3.2.16. Non-Public Water System (NPWS). A system that does not meet the definition of a public water system; for example, a well serving a building with less than 25 people.

C3.2.17. Non-Transient, Non-Community (NTNC) Water System. A public water system that is not a community water system and that regularly serves at least 25 of the same persons over 6 months per year.

C3.2.18. Point-of-Entry (POE) Treatment Device. A treatment device applied to the drinking water entering a facility to reduce contaminants in drinking water throughout the facility.

C3.2.19. Point-of-Use (POU) Treatment Device. A treatment device applied to a tap to reduce contaminants in drinking water at that tap.

C3.2.20. Potable Water. Water that has been examined and treated to meet the standards in this Chapter, and has been approved as potable by the appropriate DoD medical authority.

C3.2.21. Public Water System (PWS). A system for providing piped water to the public for human consumption, if such system has at least 15 service connections or regularly serves at least 25 year round residents. This term includes both "community water systems" that serve year-round residents and "non-community systems" along with any collection, treatment, storage, and distribution facilities under control of the operator of such systems, and any collection or pretreatment storage facilities not under such control that are used primarily in connection with such systems. A non-community system is used by intermittent users or travelers and is sub-classified into a non-transient, non-community or NTNC system and a transient, non-community or TNC system. A NTNC system could be a school or factory with its own water supply where the same people drink the water throughout the year, but not 24-hours a day. A TNC system example is a motel with its own well.

C3.2.22. Sanitary Survey. An on-site review of the water source, facilities, equipment, operation and maintenance of a public water system to evaluate the adequacy of such elements for producing and distributing potable water.

C3.2.23. Slow Sand Filtration. Water treatment process where raw water passes through a bed of sand at a low velocity (1.2 ft/hr), resulting in particulate removal by physical and biological mechanisms.

C3.2.24. Total Trihalomethanes. The sum of the concentration in mg/L of chloroform, bromoform, dibromochloromethane, and bromodichloromethane.

C3.2.25. Transient, Non-Community (TNC) Water System. A noncommunity water system that does not regularly serve at least 25 of the same persons over 6 months per year.

C3.2.26. Underground Injection. A subsurface emplacement through a bored, drilled, driven or dug well where the depth is greater than the largest surface dimension, whenever a principle function of the well is the emplacement of any fluid.

C3.2.27. Vulnerability Assessment. An evaluation by DoD that shows contaminants of concern either have not been used in a watershed area or the source of water for the system is not susceptible to contamination. Susceptibility is based on prior occurrence, vulnerability assessment results, environmental persistence and transport of the contaminants, and any wellhead protection program results.

C3.3. Criteria

C3.3.1. DoD water systems, regardless of whether they produce or purchase water, will:

C3.3.1.1. Maintain a map/drawing of the complete potable water system.

C3.3.1.2. Update the potable water system master plan at least every 5 years.

C3.3.1.3. Protect all water supply aquifers (groundwater) and surface water sources from contamination by suitable placement and construction of wells, by suitable placing of the new intake (heading) to all water treatment facilities, by siting and maintenance of septic systems and on-site treatment units, and by appropriate land use management on DoD installations. If the provincial council has established barrier zones around the water-resource catchment areas for the purpose of water supply near towns and settlements, there should be no buildings, no dogs shall be kept, and no businesses, institutions, and the like shall be run within the barrier zones. Neither shall there be any substances which shall pollute the water.

C3.3.1.4. Conduct sanitary surveys of the water system at least every 3 years, for systems using surface water, and every 5 years, for systems using groundwater, or as warranted, including review of required water quality analyses. Off-installation surveys will be coordinated with host nation authorities.

C3.3.1.5. Provide proper treatment for all water sources. Surface water supplies, including GWUDISW, must conform to the surface water treatment requirements set forth in Table C3.T1. Groundwater supplies, as a minimum, must be disinfected.

C3.3.1.6. Maintain a continuous positive pressure of at least 20 psi in the water distribution system.

C3.3.1.7. Perform water distribution system operation and maintenance practices consisting of:

C3.3.1.7.1. Maintenance of a disinfectant residual throughout the water distribution system (except where determined unnecessary by the appropriate DoD medical authority, for example when effective UV or ozone disinfectant processes are used. Tables C3.T20 and C3.T21 list CT values for Ozone and C3.T24 lists CT values for UV inactivation),

C3.3.1.7.2. Proper procedures for repair and replacement of mains (including disinfection and bacteriological testing),

- C3.3.1.7.3. An effective annual water main flushing program,
- C3.3.1.7.4. Operation and maintenance of storage tanks and reservoirs in accordance with manufacturer's instructions and applicable U.S. or host country regulations, and
- C3.3.1.7.5. Maintenance of distribution system appurtenances (including hydrants and valves).
- C3.3.1.8. Establish an effective cross connection control and backflow prevention program.
- C3.3.1.9. Manage underground injection on DoD installations to protect underground water supply sources. At a minimum, conduct monitoring to determine the effects of any underground injection wells on nearby groundwater supplies.
- C3.3.1.10. Develop and update as necessary an emergency contingency plan to ensure the provision of potable water despite interruptions from natural disasters and service interruptions. At a minimum, the plan will include:
- C3.3.1.10.1. Identification of key personnel;
 - C3.3.1.10.2. Procedures to restore service;
 - C3.3.1.10.3. Procedures to isolate damaged lines;
 - C3.3.1.10.4. Identification of alternative water supplies;
 - C3.3.1.10.5. Installation public notification procedures; and
 - C3.3.1.10.6. Emergency assessment.
- C3.3.1.11. Use only lead-free pipe, solder, flux, and fittings in the installation or repair of water systems and plumbing systems for drinking water. Provide installation public notification concerning the lead content of materials used in distribution or plumbing systems, or the corrosivity of water that has caused leaching, which indicates a potential health threat if exposed to leaded water, and remedial actions which may be taken.
- C3.3.1.12. Maintain records showing monthly operating reports for at least 3 years, and records of bacteriological results for not less than 5 years, and chemical results for not less than 10 years.
- C3.3.1.13. Document corrective actions taken to correct breaches of criteria and maintain such records for at least three years. Cross connection and backflow prevention testing and repair records should be kept for at least 10 years.
- C3.3.1.14. Conduct vulnerability assessments.
- C3.3.2. DoD water systems, regardless of whether they produce or purchase water, will, by independent testing or by validated supplier testing, ensure conformance with the following:

C3.3.2.1. Total Coliform Bacteria Requirements.

C3.3.2.1.1. An installation responsible for a PWS will conduct a bacteriological monitoring program to ensure the safety of water provided for human consumption and allow evaluation with the total coliform-related MCL. The MCL is based only on the presence or absence of total coliforms. The MCL is no more than 5% positive samples per month for a system examining 40 or more samples a month, and no more than one positive sample per month when a system analyzes less than 40 samples per month. Further, the MCL is exceeded whenever a routine sample is positive for fecal coliforms or *E. coli* or any repeat sample is positive for total coliforms.

C3.3.2.1.2. Each system must develop a written, site-specific monitoring plan and collect routine samples according to Table C3.T2, "Total Coliform Monitoring Frequency."

C3.3.2.1.3. Systems with initial samples testing positive for total coliforms will collect repeat samples as soon as possible, preferably the same day. Repeat sample locations are required at the same tap as the original sample plus an upstream and a downstream sample, each within five service connections of the original tap. Any additional repeat sampling which may be required will be performed according to the appropriate DoD medical authority. Monitoring will continue until total coliforms are no longer detected.

C3.3.2.1.4. When any routine or repeat sample tests positive for total coliforms, it will be tested for fecal coliform or *E. coli*. Fecal-type testing can be foregone on a total coliform positive sample if fecal or *E. coli* is assumed to be present.

C3.3.2.1.5. If a system has exceeded the MCL for total coliforms, the installation will complete the notification in subsection C3.3.3 to:

C3.3.2.1.5.1. The appropriate DoD medical authority, as soon as possible, but in no case later than the end of the same day the command responsible for operating the PWS is notified of the result.

C3.3.2.1.5.2. The installation public as soon as possible, but not later than 72 hours after the system is notified of the test result that an acute risk to public health may exist.

C3.3.2.2. Inorganic Chemical Requirements.

C3.3.2.2.1. An installation responsible for a PWS will ensure that the water distributed to end-users does not exceed applicable limitations set out in Table C3.T3. Except for Nitrate, Nitrite, and Total Nitrate/Nitrite, for systems monitored quarterly or more frequently, a system is out of compliance if the annual running average concentration of an inorganic chemical exceeds the MCL. For systems monitored annually or less frequently, a system is out of compliance if a single sample exceeds the MCL. For Nitrate, Nitrite, and Total Nitrate/Nitrite, system compliance is determined by averaging the single sample that exceeds the MCL with its confirmation sample; if this average exceeds the MCL, the system is out of compliance.

C3.3.2.2.2. Systems will be monitored for inorganic chemicals at the frequency set in Table C3.T4, "Inorganics Monitoring Requirements."

C3.3.2.2.3. If a system is out of compliance, the installation will complete the notification in subsection C3.3.3 as soon as possible. If the Nitrate, Nitrite, or Total Nitrate and Nitrite MCLs are exceeded, then this is considered an acute health risk and the installation will complete the notification to:

C3.3.2.2.3.1. The appropriate DoD medical authority as soon as possible, but in no case later than the end of the same day the command responsible for operating the PWS is notified of the result.

C3.3.2.2.3.2. The installation public as soon as possible, but not later than 72 hours after the system is notified of the test result. If the installation is only monitoring annually on the basis of direction from the appropriate DoD medical authority, it will immediately increase monitoring in accordance with Table C3.T4, "Inorganics Monitoring Requirements," until authorities determine the system is reliable and consistent and remedial actions completed.

C3.3.2.2.4. The MCL for Arsenic applies only to Community Water Systems (CWS).

C3.3.2.3. Fluoride Requirements.

C3.3.2.3.1. An installation commander responsible for a PWS will ensure that the fluoride content of drinking water does not exceed the MCL of 4 mg/L stated in Table C3.T3, "Inorganic Chemical MCLs."

C3.3.2.3.2. Systems will be monitored for fluoride by collecting one treated water sample at the entry point to the distribution system annually for surface water systems and one every three years for groundwater systems. Daily monitoring is recommended for systems practicing fluoridation using the criteria in Table C3.T5, "Recommended Fluoride Concentrations at Different Temperatures."

C3.3.2.3.3. If any sample exceeds the MCL, the installation will complete the notification in subsection C3.3.3 as soon as possible, but in no case later than 14 days after the violation.

C3.3.2.4. Lead and Copper Requirements.

C3.3.2.4.1. DoD CWS and NTNC water systems will comply with action levels (distinguished from the MCL) of 0.015 mg/L for lead and 1.3 mg/L for copper to determine if corrosion control treatment, public education, and removal of lead service lines, if appropriate, are required. Actions are triggered if the respective lead and copper levels are exceeded in more than 10% of all sampled taps.

C3.3.2.4.2. Affected DoD systems will conduct monitoring in accordance with Table C3.T6, "Monitoring Requirements for Lead and Copper Water Quality Parameters." High risk sampling sites will be targeted by conducting a materials evaluation of the distribution system. Sampling sites will be selected as stated in Table C3.T6.

C3.3.2.4.3. If an action level is exceeded, the installation will collect additional water quality samples specified in Table C3.T6. Optimal corrosion control treatment will be pursued. If action levels are exceeded after implementation of applicable corrosion control and source water treatment, lead service lines will be replaced if the lead service lines cause the lead action level to be exceeded. The installation commander will implement an education program for installation personnel (including U.S. and host nation) within 60 days and will complete the notification in subsection C3.3.3 as soon as possible, but in no case later than 14 days after the violation.

C3.3.2.5. Synthetic Organics Requirements.

C3.3.2.5.1. An installation responsible for CWS and NTNC will ensure that synthetic organic chemicals in water distributed to people do not exceed the limitations delineated in Table C3.T7,

“Synthetic Organic Chemical MCLs.” For systems monitored quarterly or more frequently, a system is out of compliance if the annual running average concentration of an organic chemical exceeds the MCL. For systems monitored annually or less frequently, a system is out of compliance if a single sample exceeds the MCL.

C3.3.2.5.2. Systems will be monitored for synthetic organic chemicals according to the schedule stated in Table C3.T8, “Synthetic Organic Chemical Monitoring Requirements.”

C3.3.2.5.3. If a system is out of compliance, complete the notification in subsection C3.3.3 as soon as possible, but in no case later than 14 days after the violation. The installation immediately will begin quarterly monitoring and will increase quarterly monitoring if the level of any contaminant is at its detection limit but less than its MCL as noted in Table C3.T8, and will continue until the installation commander determines the system is back in compliance, and any necessary remedial measures are implemented.

C3.3.2.6. Total Trihalomethanes Requirements.

C3.3.2.6.1. An installation responsible for a CWS and NTNC systems that adds a disinfectant (oxidant, such as chlorine, chlorine dioxide, chloramines, or ozone) to any part of its treatment process (to include the addition of disinfectant by a local water supplier) will ensure that the MCL of 0.10 mg/L for total trihalomethanes is met in drinking water.

C3.3.2.6.2. Such systems that add a disinfectant will monitor total trihalomethanes in accordance with Table C3.T9, “Total Trihalomethane Monitoring Requirements.”

C3.3.2.6.3. If a system is out of compliance, the installation will complete the notification in subsection C3.3.3 as soon as possible, but in no case later than 14 days after the violation, and undertake remedial measures.

C3.3.2.7. Radionuclide Requirements.

C3.3.2.7.1. An installation responsible for a CWS and NTNC systems will test the system for conformance with the applicable radionuclide limits contained in Table C3.T10, “Radionuclide MCLs and Monitoring Requirements.”

C3.3.2.7.2. Systems will perform radionuclide monitoring as stated in Table C3.T10.

C3.3.2.7.3. If the average annual MCL for gross alpha activity, total radium (or gross beta in systems serving over 100,000) is exceeded, the installation will complete the notification according to the procedures in subsection C3.3.3 within 14 days. Monitoring will continue until remedial actions are completed and the average annual concentration no longer exceeds the respective MCL. Continued monitoring for gross alpha-related contamination will occur quarterly, while gross beta-related monitoring will be monthly. If any gross beta MCL is exceeded, the major radioactive components will be identified.

C3.3.2.8. Surface Water Treatment Requirements. DoD water systems employing surface water sources or GWUDISW will meet the surface water treatment requirements delineated in Table C3.T1.

C3.3.2.9. Turbidity Requirements. DoD PWS filtered waters will be tested at least once every four hours. If the turbidity readings in Table C3.T1 are exceeded, the installation will complete the notification in subsection C3.3.3 as soon as possible, but in no case later than 14 days after the violation and undertake remedial action.

C3.3.2.10. Non-Public Water Systems. DoD NPWSs will be monitored as a minimum for total coliforms and disinfectant residuals periodically.

C3.3.2.11. Alternative Water Supplies. DoD installations will, if necessary, only utilize alternative water sources including POE/POU treatment devices and bottled water supplies, which are approved by the installation commander.

C3.3.3. Notification Requirements. When a DoD water system is out of compliance as set forth in the preceding criteria, the appropriate DoD medical authority and installation personnel (U.S. and host nation) will be notified. The notice will provide a clear and readily understandable explanation of the violation, any potential adverse health effects, the population at risk, the steps that the system is taking to correct the violation, the necessity for seeking alternative water supply, if any, and any preventive measures the consumer should take until the violation is corrected. The appropriate DoD medical authority will coordinate notification of host authorities in cases where off-installation populations are at risk.

C3.3.4. System Operator Requirements. DoD installations will ensure that personnel are appropriately trained to operate DoD water systems.

Table C3.T1. Surface Water Treatment Requirements

1. Unfiltered Systems
a. Systems which use unfiltered surface water or groundwater sources under the direct influence of surface water will analyze the raw water for total coliforms or fecal coliforms at least weekly and for turbidity at least daily for a minimum of one year. If the total coliforms and/or fecal coliforms exceed 100/100 mL and 20/100 mL, respectively, appropriate filtration must be applied. Appropriate filtration must also be applied if turbidity exceeds 1 Nephelometric Turbidity Unit (NTU).
b. Disinfection must achieve at least 99.9% (3-log) inactivation of <i>Giardia lamblia</i> cysts and 99.99% (4-log) inactivation of viruses by meeting applicable CT values, as shown in Tables C3.T11 through C3.T24.
c. Disinfection systems must have redundant components to ensure uninterrupted disinfection during operational periods.
d. Disinfectant residual monitoring immediately after disinfection is required once every four hours that the system is in operation. Disinfectant residual measurements in the distribution system will be made weekly.
e. Disinfectant residual of water entering the distribution system must be maintained at a minimum of 0.2 mg/L.
f. Water in a distribution system with a heterotrophic bacteria concentration less than or equal to 500/ml measured as heterotrophic plate count is considered to have a detectable disinfectant residual for the purpose of determining compliance with the Surface Water Treatment Requirements.
g. If disinfectant residuals in the distribution system are undetected in more than 5% of monthly samples for 2 consecutive months, appropriate filtration must be implemented.
2. Filtered Systems
a. Filtered water systems will provide a combination of disinfection and filtration that achieves a total of 99.9% (3-log) removal of <i>Giardia lamblia</i> cysts and 99.99% (4-log) removal of viruses.
b. The turbidity of filtered water will be monitored at least once every four hours. (USACHPPM/USAEC). The turbidity of filtered water will not exceed 0.5 NTU (1 NTU for slow sand and diatomaceous earth filters) in 95% of the analyses in a month, with a maximum of 5 NTU.
c. Disinfection must provide the remaining log-removal of <i>Giardia lamblia</i> cysts and viruses not obtained by the filtration technology applied.*
d. Disinfection residual maintenance and monitoring requirements are the same as those for unfiltered systems.

*Proper conventional treatment typically removes 2.5 log *Giardia*/ 2.0 log viruses. Proper direct filtration and diatomaceous earth filtration remove 2.0 log *Giardia*/ 1.0 log viruses. Slow sand filtration removes typically removes 2.0 log *Giardia*/ 2.0 log viruses. Less log-removal may be assumed if treatment is not properly applied.

Table C3.T2. Total Coliform Monitoring Frequency

Population Served	Number of Samples ¹	Population Served	Number of Samples ¹
25 to 1,000 ²	1	59,001 to 70,000	70
1,001 to 2,500	2	70,001 to 83,000	80
2,501 to 3,300	3	83,001 to 96,000	90
3,301 to 4,100	4	96,001 to 130,000	100
4,101 to 4,900	5	130,001 to 220,000	120
4,901 to 5,800	6	220,001 to 320,000	150
5,801 to 6,700	7	320,001 to 450,000	180
6,701 to 7,600	8	450,001 to 600,000	210
7,601 to 8,500	9	600,001 to 780,000	240
8,501 to 12,900	10	780,001 to 970,000	270
12,901 to 17,200	15	970,001 to 1,230,000	300
17,201 to 21,500	20	1,230,001 to 1,520,000	330
21,501 to 25,000	25	1,520,001 to 1,850,000	360
25,001 to 33,000	30	1,850,001 to 2,270,000	390
33,001 to 41,000	40	2,270,001 to 3,020,000	420
41,001 to 50,000	50	3,020,001 to 3,960,000	450
50,001 to 59,000	60	3,960,001 or more	480

Notes

1. Minimum Number of Routine Samples Per Month
2. A non-community water system using groundwater and serving 1,000 or less people may monitor once in each calendar quarter during which the system provides water provided a sanitary survey conducted within the last 5 years shows the system is supplied solely by a protected groundwater source and free of sanitary defects.
3. Systems serving less than 4,900 people who use groundwater and collect samples from different sites may collect all samples on a single day. All other systems must collect samples at regular intervals throughout the month.

Table C3.T3. Inorganic Chemical MCLs

Contaminant	MCL	
Arsenic (CWS only)	0.05	mg/L
Antimony ¹	0.006	mg/L
Asbestos ¹	7 million	fibers/L (longer than 10 um)
Barium	2.0	mg/L
Beryllium ¹	0.004	mg/L
Cadmium ¹	0.005	mg/L
Chromium ¹	0.1	mg/L
Cyanide ¹	0.2	mg/L (as free cyanide)
Fluoride ²	4.0	mg/L
Mercury ¹	0.002	mg/L
Nickel ¹	0.1	mg/L
Nitrate ³	10	mg/L (as N)
Nitrite ³	1	mg/L (as N)
Total Nitrite and Nitrate ³	10	mg/L (as N)
Selenium ¹	0.05	mg/L
Sodium ⁴		
Thallium	0.002	mg/L

Notes

1. MCLs apply to CWS and NTNC systems.
2. Fluoride also has a secondary MCL at 2.0 mg/L. MCL applies only to CWS.
3. MCLs apply to CWS, NTNC, and TNC systems.
4. No MCL established. Monitoring is required so concentration levels can be made available on request. Sodium levels shall be reported to the DoD medical authority upon receipt of analysis.

Table C3.T4. Inorganics Monitoring Requirements

Contaminant	Groundwater Baseline Requirement ¹	Surface Water Baseline Requirement	Trigger That Increases Monitoring ²	Reduced Monitoring
Arsenic	1 sample / 3 yr	Annual sample	>MCL	---
Antimony	1 sample / 3 yr	Annual sample	>MCL	---
Barium	1 sample / 3 yr	Annual sample	>MCL	---
Beryllium	1 sample / 3 yr	Annual sample	>MCL	---
Cadmium	1 sample / 3 yr	Annual sample	>MCL	---
Chromium	1 sample / 3 yr	Annual sample	>MCL	---
Cyanide	1 sample / 3 yr	Annual sample	>MCL	---
Fluoride	1 sample / 3 yr	Annual sample	>MCL	---
Mercury	1 sample / 3 yr	Annual sample	>MCL	---
Nickel	1 sample / 3 yr	Annual sample	>MCL	---
Selenium	1 sample / 3 yr	Annual sample	>MCL	---
Thallium	1 sample / 3 yr	Annual sample	>MCL	---
Sodium	1 sample / 3 yr	Annual sample	---	---
Asbestos	1 sample every 9 years	1 sample every 9 years	>MCL	Yes ³
Total Nitrate/Nitrite	Annual sample	Quarterly	>50% Nitrite MCL	---
Nitrate	Annual sample ⁴	Quarterly ⁴	>50% MCL ⁵	Yes ⁶
Nitrite	Annual sample ⁴	Quarterly ⁴	>50% MCL ⁵	Yes ⁷
Corrosivity ⁸	Once	Once	---	---

Notes

1. Samples shall be taken as follows: groundwater systems shall take a minimum of one sample at every entry point to the distribution system which is representative of each well after treatment; surface water systems shall take at least one sample at every entry point to the distribution system after any application of treatment or in the distribution system at a point which is representative of each source after the treatment.
2. Increased quarterly monitoring requires a minimum of 2 samples per quarter for groundwater systems and at least 4 samples per quarter for surface water systems.
3. Necessity for analysis is predicated upon a vulnerability assessment conducted by the PWS.
4. Any sampling point with an analytical value greater than or equal to 0.5 mg/L as N, (50% of the Nitrite MCL) must begin sampling for nitrate and nitrite separately. Since nitrite readily converts to nitrate, a system can conclude that if the total nitrate/nitrite value of a sample is less than half of the nitrite MCL, then the value of nitrite in the sample would also be below half of its MCL.
5. Increased quarterly monitoring shall be undertaken for nitrate and nitrate if a sample is >50% of the MCL.
6. The appropriate DoD medical authority may reduce repeat sampling frequency for surface water systems to annually if after 1 year results are <50% of MCL.
7. The appropriate DoD medical authority may reduce repeat sampling frequency to 1 annual sample if results are 50% of MCL.
8. PWSs shall be analyzed within 1 year of the effective date of country specific final governing standards to determine the corrosivity entering the distribution system. Two samples (one mid-winter and one mid-summer) will be collected at the entry point of the distribution system for systems using surface water and GWUDISW. One sample will be collected for systems using only groundwater. Corrosivity characteristics of the water shall include measurements of pH, calcium, hardness, alkalinity, temperature, total dissolved solids, and calculation of the Langelier Index.

Table C3.T5. Recommended Fluoride Concentrations at Different Temperatures

Annual Average of Maximum Daily Air Temperatures (°F)	Control Limits (mg/L)		
	Lower	Optimum	Upper
50.0 - 53.7	0.9	1.2	1.7
53.8 - 58.3	0.8	1.1	1.5
58.4 - 63.8	0.8	1.0	1.3
63.9 - 70.6	0.7	0.9	1.2
70.7 - 79.2	0.7	0.8	1.0
79.3 - 90.5	0.6	0.7	0.8

Table C3.T6. Monitoring Requirements for Lead and Copper Water Quality Parameters

Population Served	No. of Sites for Standard Monitoring ^{1,2}	No. of Sites for Reduced Monitoring ³	No. of Sites for Water Quality Parameters ⁴
>100,000	100	50	25
10,001 - 100,000	60	30	10
3,301 - 10,000	40	20	3
501 - 3,300	20	10	2
101 - 500	10	5	1
<100	5	5	1

Notes

- Every 6 months for lead and copper.
- Sampling sites shall be based on a hierarchical approach. For CWS, priority will be given to single family residences which contain copper pipe with lead solder installed after 1982, contain lead pipes, or are served by lead service lines; then, structures, including multifamily residences, with the foregoing characteristics; and finally, residences and structures with copper pipe with lead solder installed before 1983. For NTNC systems, sampling sites will consist of structures that contain copper pipe with lead solder installed after 1982, contain lead pipes, and/or are served by lead service lines. First draw samples will be collected from a cold water kitchen or bathroom tap; non-residential samples will be taken at an interior tap from which water is typically drawn for consumption.
- Annually for lead and copper if action levels are met during each of 2 consecutive 6 month monitoring periods. Any small or medium-sized system (<50,000) that meets the lead and copper action levels during three consecutive years may reduce the monitoring for lead and copper from annually to once every three years. Annual or triennial sampling will be conducted during the four warmest months of the year.
- This monitoring must be conducted by all large systems (>50,000). Small and medium sized systems must monitor water quality parameters when action levels are exceeded. Samples will be representative of water quality throughout the distribution system and include a sample from the entry to the distribution system. Samples will be taken in duplicate for pH, alkalinity, calcium, conductivity or total dissolved solids, and water temperatures to allow a corrosivity determination (via a Langelier saturation index or other appropriate saturation index); additional parameters are orthophosphate when a phosphate inhibitor is used and silica when a silicate inhibitor is used.

para-Dichlorobenzene	0.075	0.0005
Styrene	0.1	0.0005
Tetrachloroethylene	0.005	0.0005
Trichloroethylene	0.005	0.0005
Toluene	1.0	0.0005
Vinyl chloride	0.002	0.0005
Xylene (total)	10	0.0005
Other Organics		
Acrylamide	0.05% dosed at 1 ppm ¹	
Epiphydrochlorin	treatment technique 0.01% dosed at 20 ppm ¹	

Note

1. Only applies when adding these polymer flocculants to the treatment process. No sampling is required, the system certifies that dosing is within specified limits.

Table C3.T8. Synthetic Organic Chemical Monitoring Requirements

Contaminant	Base Requirement ¹		Trigger for more monitoring ²	Reduced monitoring
	Groundwater	Surface water		
VOCs	Quarterly	Quarterly	>0.0005 mg/L	Yes ^{3,4}
Pesticides/PCBs	4 quarterly samples/3 years during most likely period for their presence		>Detection limit ⁵	Yes ^{4,6}

Notes

1. Groundwater systems shall take a minimum of one sample at every entry point which is representative of each well after treatment; surface water systems will take a minimum of one sample at every entry point to the distribution system at a point which is representative of each source after treatment. For CWS, monitoring compliance is to be met within 1 year of the publishing of the OEBGD (FGS); for NTNC, compliance is to be met within 2 years of the publishing of the OEBGD (FGS).
2. Increased monitoring requires a minimum of 2 samples per quarter for groundwater systems and at least 4 samples per quarter for surface water systems.
3. Repeat sampling frequency may be reduced to annually after 1 year of no detection and every 3 years after three rounds of no detection.
4. Monitoring frequency may be reduced if warranted based on a vulnerability assessment by the PWS.
5. Detection limits noted in Table C3.T7 or as determined by the best available testing methodology.
6. Repeat sampling frequency may be reduced to the following if after one round of no detection; systems >3,300 reduce to 2 samples/year every 3 years, or systems <3,300 reduce to 1 sample every 3 years.

Note: Compliance is based on an annual running average for each sample point for systems monitoring quarterly or more frequently; for systems monitoring annually or less frequently, compliance is based on a single sample, unless the appropriate DoD medical authority requests a confirmation sample. A system is out of compliance if any contaminant exceeds the MCL.

Table C3.T9. Total Trihalomethane Monitoring Requirements

Population Served by System	Number of Samples Per Distribution System	Frequency of Samples	Type of Sample
10,000 or more	4	Quarterly	Treated
Less than 10,000	1	Annually	Treated

Notes

1. One of the samples must be taken at a location in the distribution system reflecting the maximum residence time of water in the system. The remaining samples shall be taken at representative points in the distribution system. Systems using groundwater sources that add a disinfectant should have one sample analyzed for maximum total trihalomethane potential. Systems employing surface water sources, in whole or in part, which add a disinfectant should have one sample analyzed for total trihalomethanes.
2. Compliance is based upon a running yearly average of quarterly samples for systems serving more than 10,000 people. Noncompliance exists if the average exceeds the MCL, 0.10 mg/L. For systems serving less than 10,000, which have a maximum total trihalomethane potential sample exceeding the MCL, a sample for total trihalomethanes shall be analyzed. If the total trihalomethane sample exceeds the MCL, noncompliance results.

Table C3.T10. Radionuclide MCLs and Monitoring Requirements

MCLs Contaminant	pCi/L
Gross Alpha ¹	15
Combined Radium-226 and -228	5
Gross Beta ²	50

Notes

1. Gross alpha activity includes radium-226, but excludes radon and uranium.
2. Monitoring for gross beta is only required for surface water systems over 100,000. Gross beta activity refers to the sum of beta particle and photon activity from manmade radionuclides. If gross beta exceed the MCL, i.e., equivalence to a dose of 4 millirem/year, the individual components must be determined (Strontium-90 and Tritium). See 40 CFR 141.26(b) for additional information.

Monitoring Requirements

1. For gross alpha activity and radium-226 and radium-228, systems will be tested once every 4 years. Testing will be conducted using an annual composite of 4 consecutive quarterly samples or the average of four samples obtained at quarterly intervals at a representative point in the distribution system.
2. Gross alpha only may be analyzed if activity is ≤ 5 pCi/L. Where radium-228 may be present, radium-226 and/or -228 analyses should be performed when activity is > 2 pCi/L. If the average annual concentration is less than half the maximum contaminant level, analysis of a single sample may be substituted for the quarterly sampling procedure. A system with two or more sources having different concentrations of radioactivity shall monitor source water in addition to water from a free-flowing tap. If the installation introduces a new water source, these contaminants will be monitored within the first year after introduction.

Table C3.T11. CT Values for Inactivation of *Giardia* Cysts by Free Chlorine at 0.5° C or Lower*

Chlorine Concentration (mg/L)	pH <= 6 Log Inactivations						pH = 6.5 Log Inactivations						pH = 7.0 Log Inactivations						pH = 7.5 Log Inactivations

C4. CHAPTER 4WASTEWATERC4.1. Scope

This Chapter contains criteria to control and regulate discharges of wastewaters into surface waters. This includes, but is not limited to, storm water runoff associated with industrial activities, domestic and industrial wastewater discharges and pollutants from indirect dischargers.

C4.2. Definitions

C4.2.1. 7-day Average. The arithmetic mean of pollutant parameters values for samples collected in a period of seven consecutive days.

C4.2.2. 30-day Average. The arithmetic mean of pollutant parameters value for samples collected in a period of 30 consecutive days.

C4.2.3. Average Monthly Discharge Limitations. The highest allowable average of "daily discharges" over a calendar month, calculated as the sum of all "daily discharges" measured during a calendar month divided by the number of "daily discharges" measured during that month.

C4.2.4. Average Weekly Discharge Limitation. The highest allowable average of "daily discharges" over a calendar week, calculated as the sum of all "daily discharges" measured during a calendar week divided by the number of "daily discharges" measured during that week.

C4.2.5. Best Management Practices (BMPs). Practical practices and procedures that will minimize or eliminate the possibility of pollution being introduced into waters of the host nation.

C4.2.6. BOD₅. The five-day measure of the, dissolved oxygen used by microorganisms in the biochemical oxidation of organic matter. The pollutant parameter is biochemical oxygen demand (i.e., biodegradable organics in terms of oxygen demand).

C4.2.7. CBOD₅. The five-day measure of the pollutant parameter, carbonaceous biochemical oxygen demand. This test can substitute for the BOD₅ testing which suppresses the nitrification reaction/component in the BOD₅ test.

C4.2.8. Conventional Pollutants. Biochemical oxygen demand (BOD₅), total suspended solids (TSS), oil and grease, fecal coliforms and pH.

C4.2.9. Daily Discharge. The "discharge of a pollutant" measured during a calendar day or any 24-hour period that reasonably represents the calendar day for purposes of sampling. For pollutants with limitations expressed in units of mass, the "daily discharge" is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurement (e.g. concentration) "daily discharge" is calculated as the average measurement of the pollutant over the day.

C4.2.10. Direct Discharge. Any "discharge of pollutants" other than an indirect discharge.

C4.2.11. Discharge of a Pollutant. Any addition of any pollutant or combination of pollutants to waters of host nation from any "point source."

C4.2.12. Domestic Wastewater Treatment System (DWTS). Any DoD or host nation facility designed to treat wastewater before its discharge to waters of the host nation and in which the majority of such wastewater is made up of domestic sewage.

C4.2.13. Effluent Limitation. Any restriction imposed on quantities, discharge rates, and concentrations of pollutants that are ultimately discharged from point sources into waters of the host nation.

C4.2.14. Existing Source. A source that discharges pollutants that was in operation, or under construction, prior to 1 October 1994, unless it is subsequently substantially modified.

C4.2.15. Indirect Discharge. An introduction of pollutants in process wastewater to a domestic wastewater treatment system (DWTS).

C4.2.16. Industrial Activities Associated with Storm Water. Activities that during wet weather events may contribute pollutants to storm water runoff or drainage. (See Table C4.T3.)

C4.2.17. Industrial Wastewater Treatment System (IWTS). Any DoD facility designed to treat process wastewater before its discharge to waters of the host nation other than a DWTS.

C4.2.18. Interference. Any addition of any pollutant or combination of pollutant discharges that inhibits or disrupts the DWTS, its treatment processes or operations, or its sludge handling processes, use or disposal.

C4.2.19. Maximum Daily Discharge Limitation. The highest allowable daily discharge based on volume as well as concentration.

C4.2.20. Million Gallons per Day (MGD). A fluid flow rate with the metric equivalent of 3,785,412 liters per day. This unit is typically used to measure the capacity of a treatment system.

C4.2.21. New Source. A source built or substantially modified on or after 1 October 1994 that directly or indirectly discharges pollutants to the wastewater system.

C4.2.22. Point Source. Any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, or rolling stock; but not including vessels, aircraft or any conveyance that merely collects natural surface flows of precipitation.

C4.2.23. Pollutant. Includes, but is not limited to, the following: dredged spoil; solid waste; incinerator residue; filter backwash; sewage; garbage; sewage sludge; munitions; chemical wastes; biological materials; radioactive materials; heat; wrecked or discarded equipment; rock; sand; cellar dirt; and industrial, municipal, and agricultural waste discharged into water.

C4.2.24. Process Wastewater. Any water which during manufacturing or processing, comes into direct contact with, or results from the production or use of, any raw material, intermediate product, finished product, by-product, or waste product.

C4.2.25. Regulated Facilities. Those facilities for which criteria are established under this Chapter, such as DWTS, IWTS, or industrial discharges.

C4.2.26. Storm Water. Run-off and drainage from wet weather events such as rain, snow, ice, sleet, or hail.

C4.2.27. Substantial Modification. Any modification to a facility, the cost of which exceeds \$1,000,000, regardless of funding source.

C4.2.28. Total Suspended Solids (TSS). The pollutant parameter total filterable suspended solids.

C4.2.29. Total Toxic Organics (TTO). The summation of all quantifiable values greater than 0.01 mg/L for the toxic organics in Table C4.T1.

C4.2.30. Waters of the Host Nation. Surface waters including the territorial seas recognized under customary international law, including:

C4.2.30.1. All waters, which are currently used, were used in the past, or may be susceptible to use in commerce.

C4.2.30.2. Waters which are or could be used for recreation or other purposes.

C4.2.30.3. Waters from which fish or shellfish are or could be taken and sold.

C4.2.30.4. Waters which are used or could be used for industrial purposes by industries.

C4.2.30.5. Waters including lakes, rivers, streams (including intermittent streams), sloughs, prairie potholes, or natural ponds.

C4.2.30.6. Tributaries of waters identified in paragraphs C4.2.29.1 through C4.2.29.5 of this definition.

Note - domestic or industrial waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of this Chapter, are not waters of the host nation. This exclusion applies only to manmade bodies of water that were neither originally waters of the host nation nor resulted from impoundment of waters of the host nation.

C4.3. Criteria

C4.3.1. Effluent Limitations for Direct Dischargers of Conventional Pollutants

C4.3.1.1. All new sources of pollutants directly discharged to waters of host nations will comply with the following effluent limitations:

C4.3.1.1.1. BOD₅

C4.3.1.1.1.1. The 30-day average will not exceed 30 mg/L.

C4.3.1.1.1.2. The 7-day average will not exceed 45 mg/L.

C4.3.1.1.1.3. CBOD₅ may be substituted for BOD₅. In those cases the following limits will apply:

C4.3.1.1.1.3.1. 30-day average will not exceed 25 mg/L.

C4.3.1.1.1.3.2. The 7-day average will not exceed 40 mg/L.

Note: Parameter CBOD₅ limit, if substituted for the parameter BOD₅, should be at least 5 mg/L less than each numerical limit for the 30 day and 7 day average for the BOD₅ limit. The CBOD₅ test procedure suppresses the nitrification component in the BOD₅ test procedure, thereby reducing the value or effects and lowering the oxygen demand.

C4.3.1.1.2. TSS

C4.3.1.1.2.1. The 30-day average will not exceed 30 mg/L.

C4.3.1.1.2.2. The 7-day average will not exceed 45 mg/L.

C4.3.1.1.2.3. pH. The effluent pH values will be maintained between 6.0 and 9.0.

C4.3.1.1.3. Hazardous Constituents. The following hazardous constituents will not be discharged directly to surface waters:

C4.3.1.1.3.1. Organic halogenous compounds and substances or organic silicone compounds and substances that can form such compounds in the marine environment, except substances that are non-toxic or are rapidly converted into biologically innocuous substances in the sea.

C4.3.1.1.3.2. Substances which may act as carcinogens when dumped into the sea.

C4.3.1.1.3.3. Mercury and mercurial compounds.

C4.3.1.1.3.4. Cadmium and cadmium compounds.

C4.3.1.1.3.5. Non-degradable plastics and other non-degradable synthetics capable of floating in the sea which may seriously hamper fisheries, navigation or other lawful exploitation of the sea or reduce its recreational value.

C4.3.1.1.3.6. Arsenics, lead, copper, zinc, and their compounds, cyanides, fluorides, pesticides and their by-products.

C4.3.1.1.3.7. Substances that can produce disagreeable taste in fish, crustaceans and mollusks and thereby reduce their commercial value or that can hamper fisheries or navigation.

C4.3.1.2. Existing sources of pollutants to waters of host nations will comply with the following effluent limitations:

C4.3.1.2.1. BOD₅

C4.3.1.2.1.1. The 30-day average will not exceed 45 mg/L.

C4.3.1.2.1.2. The 7-day average will not exceed 65 mg/L.

C4.3.1.2.2. TSS

C4.3.1.2.2.1. The 30-day average will not exceed 45 mg/L.

C4.3.1.2.2.2. The 7-day average will not exceed 65 mg/L.

C4.3.1.2.2.3. pH. The effluent pH values will be maintained between 6.0 and 9.0.

C4.3.1.2.3. Hazardous Constituents. The following hazardous constituents will not be discharged directly to surface waters:

C4.3.1.2.3.1. Organic halogenous compounds and substances or organic silicone compounds and substances that can form such compounds in the marine environment, except substances that are non-toxic or are rapidly converted into biologically innocuous substances in the sea.

C4.3.1.2.3.2. Substances which may act as carcinogens when dumped into the sea.

C4.3.1.2.3.3. Mercury and mercurial compounds.

C4.3.1.2.3.4. Cadmium and cadmium compounds.

C4.3.1.2.3.5. Non-degradable plastics and other non-degradable synthetics capable of floating in the sea which may seriously hamper fisheries, navigation or other lawful exploitation of the sea or reduce its recreational value.

C4.3.1.2.3.6. Arsenics, lead, copper, zinc, and their compounds, cyanides, fluorides, pesticides and their by-products.

C4.3.1.2.3.7. Substances that can produce disagreeable taste in fish, crustaceans and mollusks and thereby reduce their commercial value or that can hamper fisheries or navigation.

Note 2: If DWTS plant capacity is between 0.0 and 0.049 MGD (0.0 and 189,270 liters/day), monthly sample must comply with level for 30-day average.

C4.3.1.3. Monitoring Monitoring requirements apply to all regulated facilities. The monitoring frequency (including both sampling and analysis) given in Table C4.T2 includes all parameters which are regulated (BOD₅, TSS, and pH). Samples shall be collected at the point of discharge to the waters of the host nation.”

C4.3.1.4. Recordkeeping Requirements. The following monitoring and recordkeeping requirements are BMPs and apply to all facilities. Retain records for three years.

C4.3.1.4.1. The effluent, concentration, or other measurement specified for each regulated parameter.

C4.3.1.4.2. The daily volume of effluent discharge from each point source.

C4.3.1.4.3. Test procedures for the analysis of pollutants.

C4.3.1.4.4. The date, exact place, and time of sampling and/or measurements.

C4.3.1.4.5. The person who performed the sampling and/or measurements.

C4.3.1.4.6. The date of analysis.

C4.3.1.5. Complaint System. A system for investigating water pollution complaints from individuals or host nation water pollution control authorities will be established, involving the Environmental Executive Agent, as appropriate.

C4.3.2. Effluent Limitations For Non-Categorical Industrial Indirect Dischargers

C4.3.2.1. Effluent Limits. The following effluent limits will apply to all discharges of pollutants to DWTs and associated collection systems from process wastewater for which categorical standards have not been established (see following section for a list of categorical standards).

C4.3.2.1.1. Solid or Viscous Pollutants. The discharge of solid or viscous pollutants that would result in an obstruction to the domestic wastewater treatment plant flow is prohibited.

C4.3.2.1.2. Ignitability and Explosivity.

C4.3.2.1.2.1. The discharge of wastewater with a closed cup flashpoint of less than 60°C (140°F) is prohibited.

C4.3.2.1.2.2. The discharge of wastes with any of the following characteristics is prohibited:

C4.3.2.1.2.2.1. A liquid solution which contains more than 24% alcohol by volume and has a flash point less than 60°C (140°F).

C4.3.2.1.2.2.2. A non-liquid which under standard temperature and pressure can cause a fire through friction.

C4.3.2.1.2.2.3. An ignitable compressed gas.

C4.3.2.1.2.2.4. An oxidizer, such as peroxide.

C4.3.2.1.3. Reactivity and Fume Toxicity. The discharge of any of the following wastes is prohibited:

C4.3.2.1.3.1. Wastes which are normally unstable and readily undergo violent changes without detonating.

C4.3.2.1.3.2. Wastes that react violently with water.

C4.3.2.1.3.3. Wastes which form explosive mixtures with water or form toxic gases or fumes when mixed with water;

C4.3.2.1.3.4. Cyanide or sulfide waste that can generate potentially harmful toxic fumes, gases, or vapors;

C4.3.2.1.3.5. Waste capable of detonation or explosive decomposition or reaction at standard temperature and pressure;

C4.3.2.1.3.6. Wastes which contain explosives regulated by Chapter 5, and

C4.3.2.1.3.7. Wastes which produce any toxic fumes, vapors, or gases with the potential to cause safety problems or harm to workers.

C4.3.2.1.4. Corrosivity. It is prohibited to discharge pollutants that have the potential to be structurally corrosive to the DWTS. In addition, no discharge of wastewater below a pH of 5.0 is allowed, unless the DWTS is specifically designed to handle this type of wastewater.

C4.3.2.1.5. Oil and Grease. The discharge of the following oils, which can pass through or cause interference to the DWTS, is prohibited: petroleum oil, non-biodegradable cutting oil, and products of mineral oil origin.

C4.3.2.1.6. Spills and Batch Discharges (slugs). Activities or installations that have a significant potential for spills or batch discharges will develop a slug prevention plan. Each plan must contain the following minimum requirements:

C4.3.2.1.6.1. Description of discharge practices, including non-routine batch discharges;

C4.3.2.1.6.2. Description of stored chemicals;

C4.3.2.1.6.3. Plan for immediately notifying the DWTS of slug discharges and discharges that would violate prohibitions under this section, including procedures for subsequent written notification within five days;

C4.3.2.1.6.4. Necessary practices to prevent accidental spills. This would include proper inspection and maintenance of storage areas, handling and transfer of materials, loading and unloading operations, control of plant site runoff, and worker training;

C4.3.2.1.6.5. Proper procedures for building containment structures or equipment;

C4.3.2.1.6.6. Necessary measures to control toxic organic pollutants and solvents; and

C4.3.2.1.6.7. Proper procedures and equipment for emergency response, and any subsequent plans necessary to limit damage suffered by the treatment plant or the environment.

C4.3.2.1.7. Trucked and Hauled Waste. The discharge of trucked and hauled waste into the DWTS, except at locations specified by the DWTS operator, is prohibited.

C4.3.2.1.8. Heat in amounts which inhibit biological activity in the DWTS resulting in interference, but in no case in such quantities that the temperature of the process water at the DWTS exceeds 40°C (104°F).

C4.3.2.2. Complaint System. A system for investigating water pollution complaints from host nation water pollution control authorities will be established involving the Environmental Executive Agent as appropriate.

C4.3.3. Effluent Limitations for Categorical Industrial Dischargers (Direct or Indirect)

C4.3.3.1. Any installations which have activities that fall into any of the industrial categories listed below must comply with the following effluent limitations (i.e., either direct or indirect discharge limitations at the source of the discharge). For most categories, the effluent limitations are the same for

new and existing activities. Where differences in limitations exist, activities constructed or substantially modified on or after 1 October 1994 will meet the limitations for new activities.

C4.3.3.1.1. Electroplating. The following discharge standards apply to electroplating operations in which metal is electroplated on any basis material and to related metal finishing operations as set forth in the various subparts. These standards apply whether such operations are conducted in conjunction with electroplating, independently, or as part of some other operation. Electroplating subparts are identified as follows:

C4.3.3.1.1.1. Electroplating of Common Metals. Discharges of pollutants in process waters resulting from the process in which a material is electroplated with copper, nickel, chromium, zinc, tin, lead, cadmium, iron, aluminum, or any combination thereof.

C4.3.3.1.1.2. Electroplating of Precious Metals. Discharges of pollutants in process waters resulting from the process in which a material is plated with gold, silver, iridium, palladium, platinum, rhodium, ruthenium, or any combination thereof.

C4.3.3.1.1.3. Anodizing. Discharges of pollutants in process waters resulting from the anodizing of ferrous and nonferrous materials.

C4.3.3.1.1.4. Metal Coatings. Discharges of pollutants in process waters resulting from the chromating, phosphating, or immersion plating on ferrous and nonferrous materials.

C4.3.3.1.1.5. Chemical Etching and Milling. Discharges of pollutants in process waters resulting from the chemical milling or etching of ferrous and nonferrous materials.

C4.3.3.1.1.6. Electroless Plating. Discharges of pollutants in process waters resulting from the electroless plating of a metallic layer on a metallic or nonmetallic substrate.

C4.3.3.1.1.7. Printed Circuit Board Manufacturing. Discharges of pollutants in process waters resulting from the manufacture of printed circuit boards, including all manufacturing operations required or used to convert an insulating substrate to a finished printed circuit board.

C4.3.3.1.1.8. The following discharge standards apply to new and existing facilities in the above electroplating subparts which directly or indirectly discharge less than 38,000 liters per day (10,000 gallons per day):

Pollutant	(mg/L)	Daily Maximum	4-day Average
		(mg/L)	
Cyanide, amenable		5.0	2.7
Lead		0.6	0.4
Cadmium		1.2	0.7
Total Toxic Organics		4.57	---

C4.3.3.1.1.9. The following discharge standards apply to new and existing facilities in the above electroplating subparts which directly, or indirectly, discharge 38,000 liters per day (10,000 gallons per day) or more:

Pollutant	Daily Maximum (mg/L)	4-day Average (mg/L)
Cyanide, total	1.9	1.0
Copper	4.5	2.7
Nickel	4.1	2.6
Chrome	7.0	4.0
Zinc	4.2	2.6
Lead	0.6	0.4
Cadmium	1.2	0.7
Total Metals	10.5	6.8
Total Toxic Organics	2.13	---

C4.3.3.1.1.10. In addition to the above standards, new and existing facilities which electroplate precious metals and which directly or indirectly discharge 38,000 liters per day (10,000 gallons per day) or more must comply with the following standard:

Pollutant	Daily Maximum (mg/L)	4-day Average (mg/L)
Silver	1.2	0.7

C4.3.3.1.2. Monitoring. Monitoring of categorical industrial dischargers (including both sampling and analysis) will be accomplished quarterly and will include all parameters, which are specified in the section of this Chapter dealing with industrial dischargers. Samples should be collected at the point of discharge prior to any mixing with the receiving water. Sampling for total toxic organics (TTO) may not be required if the commanding officer determines that no discharge of concentrated toxic organics into the wastewaters has occurred and the facility has implemented a TTO management plan. (See Table C4.T2, "Monitoring Requirements").

C4.3.4. Storm Water Management

C4.3.4.1. Develop and implement storm water pollution prevention (P2) plans for activities listed in Table C4.T3. Update the storm water pollution prevention plan (SWPPP) annually using in-house resources.

C4.3.4.2. Employee Training. Personnel who handle hazardous substances or perform activities that could contribute pollution to wet weather events should be trained in appropriate Best Management Practices. Such training should stress P2 principles and awareness of possible pollution sources including non-traditional sources such as sediment, nitrates, pesticides, and fertilizers.

C4.3.5. Septic System. Discharge to a septic system of wastewater containing industrial pollutants in levels that will inhibit biological activity is prohibited. Known discharges of industrial pollutants to existing septic systems shall be eliminated and appropriate actions should be taken to eliminate contamination. Siting of such systems is addressed in Chapter 3, "Drinking Water."

C4.3.6. Sludge Disposal. All sludges produced during the treatment of wastewater will be disposed of under Chapter 6, "Hazardous Waste" or Chapter 7, "Solid Waste" as appropriate.

Table C4.T1. Components of Total Toxic Organics

Volatile Organics	
Acrolein (Propenyl)	Bromodichloromethane
Acrylonitrile	1,1,2,2-Tetrachloroethane
Methyl chloride (chloromethane)	1,2-Dichloropropane
Methyl bromide (bromomethane)	1,3-Dichloropropylene (1,3-Dichloropropene)
Vinyl Chloride (chloroethylene)	Trichloroethene
Chloroethane	Dibromochloromethane
Methylene Chloride (9 dichloromethane)	1,1,2-Trichloroethane
1,1-Dichloroethene	Benzene
1,1-Dichloroethane	2-Chloroethyl vinyl ether (mixed)
1,2-Dichloroethane	Bromoform (tribromomethane)
1,2-trans-Dichloroethene	Tetrachloroethene
Chloroform (trichloromethane)	Toluene
1,1,1-Trichloroethane	Chlorobenzene
Carbon Tetrachloride (tetrachloromethane)	Ethylbenzene
Base/Neutral Extractable Organics	
N-nitrosodimethylamine	Diethyl phthalate
bis (2-chloroethyl) ether	1,2-Diphenylhydrazine
1,3-Dichlorobenzene	N-nitrosodiphenylamine
1,4-Dichlorobenzene	4-Bromophenyl phenyl ether
1,2-Dichlorobenzene	Hexachlorobenzene
bis(2-chloroisopropyl)-ether	Phenanthrene
Hexachloroethane	Anthracene
N-nitrosodi-n-propylamine	Di-n-butyl phthalate
Nitrobenzene	Fluoranthene
Isophorone	Pyrene
bis (2-chloroethoxy) methane	Benzidine
1,2,4-trichlorobenzene	Butyl benzyl phthalate
Naphthalene	1,2-benzoanthracene (benzo (a) anthracene)
Hexachlorobutadiene	Chrysene
Hexachlorocyclopentadiene	3,3-Dichlorobenzidine
2-Chloronaphthalene	bis (2-ethylhexyl) phthalate
Acenaphthylene	Di-n-octyl phthalate
Dimethyl Phthalate	3,4-Benzofluoranthene (benzo (b) fluoranthene)
2,6-Dinitrotoluene	11,12-Benzofluoranthene (benzo (k) fluoranthene)
Acenaphthene	Benzo (a) pyrene (3,4-benzopyrene)
2,4-Dinitrotoluene	Indeno (1,2,3-cd) pyrene (2,3-o-phenylene pyrene)
Fluorene	1,2,5,6-Dibenzanthracene (dibenzo (a,h) anthracene)
4-Chlorophenyl phenyl ether	1,12-Benzoperylene (benzo (g,h,i) perylene)

Table C4.T1. Components of Total Toxic Organics (continued)

Acid Extractables Organics	
2-Chlorophenol	2,4,6-Trichlorophenol
Phenol	2,4-Dinitrophenol
2-Nitrophenol	4-Nitrophenol
2,4-Dimethylphenol	p-Chloro-m-cresol
2,4-Dichlorophenol	Pentachlorophenol
4,6-Dinitro-o-cresol	
Pesticides/PCBs	
Alpha-Endosulfan	Endrin
Beta-Endosulfan	Endrin aldehyde
Endosulfan sulfate	Heptachlor
Alpha-BHC	Heptachlor Epoxide (BHC-hexachlorocyclohexane)
Beta-BHC	Toxaphene
Delta-BHC	PCB-1242 (Arochlor 1242)
Gamma-BHC	PCB-1254 (Arochlor 1254)
4,4-DDT	PCB-1221 (Arochlor 1221)
4,4-DDE (p,p-DDX)	PCB-1232 (Arochlor 1232)
(p,p-TDE)	PCB-1248 (Arochlor 1248)
Aldrin	PCB-1260 (Arochlor 1260)
Chlordane (technical mixture and metabolites)	PCB-1016 (Arochlor 1016)
Dieldrin	

Table C4.T2. Monitoring Requirements

Plant Capacity (MGD)	Plant Capacity (liters/day)	Monitoring Frequency
0.001 - 0.99	3,785 – 3,785,411	Monthly
1.0 - 4.99	3785,412 – 18,927,059	Weekly
> 5.0	> 18,927,060	Daily

Table C4.T3. Best Management Practices

Activity	Best Management Practice
Aircraft Ground Support Equipment Maintenance	Perform maintenance/repair activities inside Use drip pans to capture drained fluids Cap hoses to prevent drips and spills
Aircraft/runway deicing	Perform anti-icing before the storm Put critical aircraft in hangars/shelters
Aircraft/vehicle fueling operations	Protect fueling areas from the rain Provide spill response equipment at fueling station
Aircraft/vehicle maintenance & repair	Perform maintenance/repair activities inside Use drip pans to capture drained fluids
Aircraft/vehicle washing	Capture wash water and send to wastewater treatment plant Treat wash water with oil water separator before discharge
Bulk fuel storage areas	Use dry camlock connectors to reduce fuel loss Capture spills with drip pans when breaking connections Curb fuel transfer areas, treat with oil water separator
Construction activities	Construct sediment dams/silt fences around construction sites
Corrosion control activities	Capture solvent/soaps used to prepare aircraft for painting Perform corrosion control activities inside
Hazardous material storage	Store hazardous materials inside or under cover Reduce use of hazardous materials
Outdoor material storage areas	Cover and curb salt, coal, urea piles Store product drums inside or under cover Reduce quantity of material stored outside
Outdoor painting/depainting operations	Capture sandblasting media for proper disposal Capture paint clean up materials (thinners, rinsates)
Pesticide operations	Capture rinse water when mixing chemicals Store spray equipment inside
Power production	Capture leaks and spills from power production equipment using drip pans, etc.
Vehicle storage yards	Check vehicles in storage for leaks and spills Use drip pans to capture leaking fluids

C5. CHAPTER 5HAZARDOUS MATERIALC5.1. Scope

This Chapter contains criteria for the storage, handling, and disposition of hazardous materials. It does not cover solid or hazardous waste, underground storage tanks, petroleum storage, and related spill contingency and emergency response requirements. These matters are covered under other Chapters. These Standards do not cover munitions.

C5.2. Definitions

C5.2.1. Hazardous Chemical Warning Label. A label, tag, or marking on a container which provides the following information:

C5.2.1.1. Identification/name of hazardous chemicals,

C5.2.1.2. Appropriate hazard warnings, and

C5.2.1.3. The name and address of the manufacturer, importer or other responsible party; and which is prepared in accordance with DoD 6050.5-H.

C5.2.2. Hazardous Material. Any material that is capable of posing an unreasonable risk to health, safety, or environment if improperly handled, stored, issued, transported, labeled, or disposed because it displays a characteristic listed in Table C5.T1, "Typical Hazardous Materials Characteristics," or the material is listed in Table AP1.T4 found in Chapter 20 (Appendix 1). Munitions are excluded.

C5.2.3. Hazardous Material Information System (HMIS). The computer-based information system developed to accumulate, maintain, and disseminate important information on hazardous material used by DoD. The HMIS has been assigned Report Control Symbol DD-A&T(AR)1486 in accordance with DoD 8910-M.

C5.2.4. Hazardous Material Shipment. Any movement of hazardous material in a DoD land vehicle either from an installation to a final destination off the installation, or from a point of origin off the installation to a final destination on the installation, in excess of any of the following quantities:

C5.2.4.1. For hazardous material identified as a result of inclusion in Table AP1.T4 found in Chapter 20 (Appendix 1), any quantity in excess of the reportable quantity listed in Table AP1.T4;

C5.2.4.2. For other liquid or semi-liquid hazardous material, in excess of 410 liters (110 gallons);

C5.2.4.3. For other solid hazardous material, in excess of 225 Kg (500 pounds); or

C5.2.4.4. For combinations of liquid, semi-liquid and solid hazardous materials, in excess of 340 Kg (750 pounds).

C5.2.5. Material Safety Data Sheet (MSDS). A form used by manufacturers of chemical products to communicate to users the chemical, physical, and hazardous properties of their product.

C5.3. Criteria

C5.3.1. Storage and handling of hazardous materials will adhere to DoD Component policies, including Joint Service Publication on Storage and Handling of Hazardous Materials. DLAI 4145.11, TM 38-410, NAVSUP PUB 573, AFJMAN 23-209, and MCO 4450.12A provide additional guidance on the storage and handling of hazardous materials. The International Maritime Dangerous Goods (IMDG) Code and appropriate DoD and component instructions provide requirements for international maritime transport of hazardous materials originating from DoD installations. International air shipments of hazardous materials originating from DoD installations are subject to International Civil Air Organization Rules or DoD Component guidance including AFJM 24-204, TM 38-250, NAVSUP 505, MCO P4030.19E, and DLAM 4145.3.

C5.3.2. Hazardous material dispensing areas will be properly maintained. Drums/containers must not be leaking. Drip pans/absorbent materials will be placed under containers as necessary to collect drips or spills. Container contents will be clearly marked. Dispensing areas will be located away from catch basins and storm drains.

C5.3.3. Installations will ensure that for each hazardous material shipment.

C5.3.3.1. The shipment is accompanied throughout by shipping papers that clearly describe the quantity and identity of the material and which include an MSDS;

C5.3.3.2. All drivers are briefed on the hazardous material included in the shipment, including health risks of exposure and the physical hazards of the material including potential for fire, explosion and reactivity;

C5.3.3.3. Drivers will be trained on spill control and emergency notification procedures.

C5.3.3.4. For any hazardous material categorized on the basis of Chapter 20 (Appendix 1), the shipping papers and briefing for the driver include identification of the material as "Ignitable," "Corrosive," "Reactive," or "Toxic;"

C5.3.3.5. The vehicles are subjected to a walk-around inspection by supervisory personnel before and after the material is loaded; and

C5.3.3.6. Packages are labeled in accordance with subsection C5.3.7.

C5.3.4. Each installation will maintain a master listing of all storage locations for hazardous material and an inventory of all hazardous materials contained therein (see subsection C18.3.2.).

C5.3.5. Material Safety Data Sheets. Each material safety data sheet shall be in English or the predominant language in the work place, and shall contain at least the following information:

C5.3.5.1. The identity used on the label

C5.3.5.1.1. If the hazardous chemical is a single substance, its chemical and common name, and its Chemical Abstract Service (CAS) Number.

C5.3.5.1.2. If the hazardous chemical is a mixture which has been tested as a whole to determine its hazards, the chemical and common name(s) of the ingredients which contribute to these known hazards, and the common name(s) of the mixture itself; or,

C5.3.5.1.3. If the hazardous chemical is a mixture which has not been tested as a whole:

C5.3.5.1.3.1. The chemical and common name(s) of all ingredients which have been determined to be health hazards, and which comprise 1% or greater of the composition, except that chemicals identified as carcinogens shall be listed if the concentrations are 0.1% or greater;

C5.3.5.1.3.2. The chemical and common name(s) of all ingredients which have been determined to be health hazards, and which comprise less than 1% (0.1% for carcinogens) of the mixture, if there is evidence that the ingredient(s) could be released from the mixture in concentrations which would exceed an established OSHA permissible exposure limit, or could present a health hazard to employees; and,

C5.3.5.1.3.3. The chemical and common name(s) of all ingredients which have been determined to present a physical hazard when present in the mixture;

C5.3.5.2. Physical and chemical characteristics of the hazardous chemical (such as vapor pressure, flash point);

C5.3.5.3. The physical hazards of the hazardous chemical, including the potential for fire, explosion, and reactivity;

C5.3.5.4. The health hazards of the hazardous chemical, including signs and symptoms of exposure, and any medical conditions which are generally recognized as being aggravated by exposure to the chemical;

C5.3.5.5. The primary route(s) of entry (inhalation, skin absorption, ingestion, etc.);

C5.3.5.6. The appropriate occupational exposure limit recommended by the chemical manufacturer, importer, or employer preparing the material safety data sheet, where available;

C5.3.5.7. Whether the hazardous chemical has been found to be a potential carcinogen;

C5.3.5.8. Any generally applicable precautions for safe handling and use which are known to the chemical manufacturer, importer or employer preparing the material safety data sheet, including appropriate hygienic practices, protective measures during repair and maintenance of contaminated equipment, and procedures for clean-up of spills and leaks;

C5.3.5.9. Any generally applicable control measures which are known to the chemical manufacturer, importer or employer preparing the material safety data sheet, such as appropriate engineering controls, work practices, or personal protective equipment;

C5.3.5.10. Emergency and first aid procedures;

C5.3.5.11. The date of preparation of the material safety data sheet or the last change to it; and,

C5.3.5.12. The name, address and telephone number of the chemical manufacturer, importer, employer or other responsible party preparing or distributing the material safety data sheet, who can provide additional information on the hazardous chemical and appropriate emergency procedures, if necessary.

C5.3.6. Each work center will maintain a file of Material Safety Data Sheets (MSDS) for each hazardous material procured, stored, or used at the work center. MSDSs, which are not contained in the HMIS and those MSDSs, prepared for locally purchased items should be incorporated into HMIS. A file of MSDS information not contained in HMIS should be maintained on site.

C5.3.7. All hazardous materials on DoD installations will have a Hazardous Chemical Warning Label in accordance with DoD 6050.5-H and have MSDS information either available or in HMIS in accordance with DoD Directive 6050.1 and other Component instructions. These requirements apply throughout the life-cycle of these materials.

C5.3.8. DoD installations will reduce the use of hazardous materials where practical through resource recovery, recycling, source reduction, acquisition, or other minimization strategies in accordance with Service guidance on improved hazardous material management processes and techniques.

C5.3.9. All excess hazardous material will be processed through the Defense Reutilization and Marketing Service (DRMS) in accordance with the procedures in DoD 4160.21-M. DRMS will only donate, transfer, or sell hazardous material to environmentally responsible parties. This subsection is not intended to prohibit the transfer of usable HM between DoD activities participating in a regional or local pharmacy or exchange program.

C5.3.10. All personnel who use, handle or store hazardous materials will be trained in accordance with DoDI 6050.1, and other Component instructions.

C5.3.11. The installation must prevent the unauthorized entry of persons or livestock into the hazardous materials storage area.

Table C5.T1. Typical Hazardous Materials Characteristics

1. The item is a health or physical hazard. Health hazards include carcinogens, corrosive materials, irritants, sensitizers, toxic materials, and materials which damage the skin, eyes, or internal organs. Physical hazards include combustible liquids, compressed gasses, explosives, flammable materials, organic peroxides, oxidizers, pyrophoric materials, unstable (reactive) materials, and water-reactive materials.
2. The item and/or its disposal is regulated by the host nation because of its hazardous nature.
3. The item contains asbestos, mercury, or polychlorinated biphenyls.
4. The item has a flashpoint below 93°C (200°F) closed cup, or is subject to spontaneous heating or is subject to polymerization with release of large amounts of energy when handled, stored, and shipped without adequate control.
5. The item is a flammable solid or is an oxidizer or is a strong oxidizing or reducing agent with a standard reduction potential of greater than 1.0 volt or less than -1.0 volt.
6. In the course of normal operations, accidents, leaks, or spills, the item may produce dusts, gases, fumes, vapors, mists, or smokes with one or more of the above characteristics.
7. The item has special characteristics, which in the opinion of the manufacturer or the DoD Components could cause harm to personnel if used or stored improperly.

C6. CHAPTER 6HAZARDOUS WASTEC6.1. Scope

This Chapter contains criteria for a comprehensive management program to ensure that hazardous waste is identified, stored, transported, treated, disposed and recycled in an environmentally-sound manner.

C6.2. Definitions

C6.2.1. Acute Hazardous Waste. Those wastes listed in Table AP1.T4 found in Chapter 20 (Appendix 1) with a U.S. EPA waste number with the "P" designator, or those hazardous wastes in Table AP1.T4 with Hazard Code (H).

C6.2.2. Disposal. The discharge, deposit, injection, dumping, spilling, leaking, or placing of any hazardous waste into, or on any land or water so that the waste or constituent thereof may enter the environment. Proper disposal effectively mitigates hazards to human health and the environment.

C6.2.3. DoD Hazardous Waste Generator. In DoD, a generator is considered to be the installation, or activity on an installation, which produces a hazardous waste.

C6.2.4. Hazardous Constituent. A chemical compound that is listed by name in Table AP1.T4 found in Chapter 20 (Appendix 1) or possesses the characteristics described in subsection C20.1.

C6.2.5. Hazardous Waste. A discarded material that may be solid, semi-solid, liquid, or contained gas and either exhibits a characteristic of a hazardous waste defined in subsection C20.1 Tables AP1.T1 and AP1.T2 or is listed as a hazardous waste in Tables AP1.T3 and AP1.T4. Excluded from this definition are domestic sewage sludge, household wastes, and medical wastes.

C6.2.6. Hazardous Waste Accumulation Point (HWAP). A shop, site, or other work center where hazardous wastes are accumulated until removed to a Hazardous Waste Storage Area (HWSA) or shipped for treatment or disposal. A HWAP may be used to accumulate no more than 208 liters (55 gallons) of hazardous waste, or 1 liter (1 quart) of acute hazardous waste, from each waste stream. The HWAP must be at or near the point of generation and under the control of the operator.

C6.2.7. Hazardous Waste Fuel. Hazardous wastes burned for energy recovery. Fuel produced from hazardous waste by processing, blending, or other treatment is also hazardous waste fuel.

C6.2.8. Hazardous Waste Generation. Any act or process that produces hazardous waste (HW) as defined in these Standards.

C6.2.9. Hazardous Waste Profile Sheet (HWPS). A document, which identifies and characterizes the waste by providing user's knowledge of the waste, and/or lab analysis, and details the physical, chemical, and other descriptive properties or processes which, created the hazardous waste.

C6.2.10. Hazardous Waste Storage Area (HWSA). One or more locations on a DoD installation where HW is collected prior to shipment for treatment or disposal. A HWSA may store more than 55 gallons of a HW stream and more than one quart of an acute HW stream.

C6.2.11. Hazardous Waste Storage Area Manager. A person, or agency, on the installation assigned the operational responsibility for receiving, storing, inspecting, and general management of the installation's HWSA or HWSA program.

C6.2.12. Land Disposal. Placement in or on the land, including, but not limited to, land treatment, facilities, surface impoundments, underground injection wells, salt dome formations, salt bed formations, underground mines or caves.

C6.2.13. Treatment. Any method, technique, or process, excluding elementary neutralization, designed to change the physical, chemical, or biological characteristics or composition of any hazardous waste so as to render such waste non-hazardous, or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume.

C6.2.14. Unique Identification Number. A number assigned to generators of hazardous waste to identify the generator and used to assist in tracking the waste from point of generation to ultimate disposal. Installations shall utilize the Department of Defense Activity Address Code (DoDAAC) in accordance with DRMS procedures. In the event that DRMS is not the method of waste disposal, a unique identification number will be assigned after consultation with the Environmental Executive Agent.

C6.2.15. Used Oil Burned for Energy Recovery. Used oil that is burned for energy recovery is termed "used oil fuel." Used oil fuel includes any fuel produced from used oil by processing, blending, or other treatment. "Used oil," means any oil or other waste POL product that has been refined from crude oil, or is synthetic oil, has been used, and as a result of such use, is contaminated by physical or chemical impurities. Although used oil may exhibit the characteristics of reactivity, toxicity, ignitability, or corrosivity, it is still considered used oil, unless it has been mixed with hazardous waste. Used oil mixed with hazardous waste is a hazardous waste and will be managed as such.

C6.2.16. Hazardous Waste Log. A listing of HW deposited and removed from a HWSA. Information such as the waste type, volume, location, and storage removal dates should be recorded.

C6.2.17. Elementary Neutralization. A process of neutralizing a HW, which is hazardous only because of the corrosivity characteristic. It must be accomplished in a tank, transport vehicle, or container.

C6.3. Criteria

C6.3.1. DoD Hazardous Waste Generators

C6.3.1.1. Hazardous Waste Determination and Characterization. Generators will identify and characterize the wastes generated at their site using their knowledge of the materials and processes, which generated the waste, or through laboratory analysis of the waste. Generators will identify inherent hazardous characteristics associated with a waste in terms of physical properties (e.g., solid, liquid, contained gases), chemical properties (e.g., chemical constituents, technical or chemical name) and/or other descriptive properties (e.g., ignitable, corrosive, reactive, toxic). The properties defining the characteristics should be measurable by standardized and available testing protocols.

C6.3.1.2. A Hazardous Waste Profile Sheet (HWPS) will be used to identify each hazardous waste stream. The HWPS must be updated by the generator, as necessary, to reflect any new waste streams or process modifications that change the character of the hazardous waste being handled at the storage area.

C6.3.1.3. Each generator will use a unique identification number for all recordkeeping, reports and manifests for hazardous waste.

C6.3.1.4. Pre-Transport Requirements

C6.3.1.4.1. Transportation

C6.3.1.4.1.1. When transporting hazardous waste via commercial transportation on host nation public roads and highways, hazardous waste generators will prepare off-installation hazardous waste shipments in compliance with applicable host nation transportation regulations. Requirements may include placarding, marking, containerization, and labeling. Hazardous waste designated for international transport will be prepared in accordance with applicable international regulations. In the absence of host nation regulations, international standards will be used.

C6.3.1.4.1.2. When transporting hazardous waste via military vehicle on host nation public roads and highways, generators will ensure compliance with Service regulations for the transport of hazardous materials and, if required by applicable international agreement (i.e., SOFA, basing, etc.), host nation transportation regulations.

C6.3.1.4.2. Manifesting. All hazardous waste leaving the installation will be accompanied by a manifest to ensure a complete audit trail from point of origin to ultimate disposal. The manifest will include the information listed below. Host nation forms will be used when applicable; otherwise, DD Form 1348-1A, Issue Release/Receipt Document, or DD Form 1348-2, Issue Release/Receipt Document with Address Label, may be used. This manifest should include:

- C6.3.1.4.2.1. Generator's name, address, and telephone number;
- C6.3.1.4.2.2. Generator's unique identification number;
- C6.3.1.4.2.3. Transporter's name, address, and telephone number;
- C6.3.1.4.2.4. Destination name, address, and telephone number;
- C6.3.1.4.2.5. Description of waste;
- C6.3.1.4.2.6. Total quantity of waste;
- C6.3.1.4.2.7. Date of shipment; and
- C6.3.1.4.2.8. Date of receipt.

C6.3.1.4.3. Generators will maintain an audit trail of hazardous waste from the point of generation to disposal. Generators using DRMS disposal services will obtain a signed copy of the manifest from the initial DRMS recipient of the waste, at which time DRMS assumes responsibility. A generator, as provided in a host-tenant agreement, that uses the hazardous waste management and/or disposal program of a DoD component that has a different unique identification number (see definition C6.2.14.), will obtain a signed copy of the manifest from the receiving component, at which time the receiving component will assume responsibility for subsequent storage, transfer and disposal of the waste. Activities desiring to dispose of their waste outside of the DRMS system will develop their own manifest tracking system to provide an audit trail from point of generation to ultimate disposal.

C6.3.2. Hazardous Waste Accumulation Points (HWAP)

C6.3.2.1. A HWAP is defined in subsection C6.2.6. Each HWAP must be designed and operated to provide appropriate segregation for different waste streams, including those, which are chemically incompatible. Each HWAP will have warning signs (National Fire Protection Association or appropriate international sign) appropriate for the waste being accumulated at that site.

C6.3.2.2. A hazardous waste accumulation point will comply with the storage limits in subsection C6.2.6. When these limits have been reached, the generator will make arrangements within five working days to move the hazardous waste to a HWSA or ship it off-site for treatment or disposal. Arrangements must include submission of all appropriate turn-in documents to initiate the removal (e.g., DD 1348-1A) to appropriate authorities responsible for removing the HW (e.g., DRMO).

C6.3.2.3. All criteria of subsection C6.3.4 of this Chapter, Use and Management of Containers, apply to HWAPs with the exception of subparagraph C6.3.4.1.5 (weekly inspections).

C6.3.2.4. The following provisions of subsection C6.3.5, Recordkeeping Requirements, apply to HWAPs: paragraphs C6.3.5.1 (Turn-in documents), C6.3.5.5 (Manifests), and C6.3.5.6 (Waste Characterization).

C6.3.2.5. Personnel Training. Personnel assigned HWAP duty must successfully complete appropriate hazardous waste training necessary to perform their assigned duties. At a minimum, this must include pertinent waste handling and emergency response procedures. Generic HW training requirements are described in subsection C6.3.9 of this Chapter.

C6.3.3. Hazardous Waste Storage Areas (HWSA)

C6.3.3.1. Location Standards. To the maximum extent possible, all HWSA will be located to minimize the risk of release due to seismic activity, floods, or other natural events. For facilities located where they may face such risks, the installation spill prevention and control plan must address the risk.

C6.3.3.2. Design and Operation of HWSA. HWSAs must be designed, constructed, maintained, and operated to minimize the possibility of a fire, explosion, or any unplanned release of hazardous waste or hazardous waste constituents to air, soil, groundwater or surface water that could threaten human health or the environment. Hazardous waste should not be stored longer than one year in a HWSA.

C6.3.3.3. Waste Analysis and Verification

C6.3.3.3.1. Waste Analysis Plan. The HWSA manager, in conjunction with the installation(s) served, will develop a plan to determine how and when wastes are to be analyzed. The waste analysis plan will include procedures for characterization and verification testing of both on-site and off-site hazardous waste. The plan should include: parameters for testing and rationale for choosing them, frequency of analysis, test methods, and sampling methods.

C6.3.3.3.2. Maintenance of Waste Analysis File. The HWSA must have, and keep on file, a hazardous waste profile sheet (HWPS) for each waste stream that is stored at each HWSA.

C6.3.3.3.3. Waste Verification. Generating activities will provide identification of incoming waste on the HWPS to the HWSA manager. Prior to accepting the waste, the HWSA manager will:

C6.3.3.3.3.1. Inspect the waste to ensure it matches the description provided;

C6.3.3.3.3.2. Ensure that no waste is accepted for storage unless a HWPS is provided, or available and properly referenced.

C6.3.3.3.3.3. Request a new HWPS from the generator if there is reason to believe that the process generating the waste has changed;

C6.3.3.3.3.4. Analyze waste shipments in accordance with the waste analysis plan to determine whether it matches the waste description on the accompanying manifest and documents; and

C6.3.3.3.3.5. Reject shipments that do not match the accompanying waste descriptions unless the generator provides an accurate description.

C6.3.3.4. Security

C6.3.3.4.1. General. The installation must prevent the unknowing entry, and minimize the possibility for unauthorized entry, of persons or livestock onto the hazardous waste storage area grounds.

C6.3.3.4.2. Security System Design. An acceptable security system for a hazardous waste storage area consists of either:

C6.3.3.4.2.1. A 24-hour surveillance system (e.g. television monitoring or surveillance by guards or other designated personnel) that continuously monitors and controls entry into the hazardous waste storage area; or

C6.3.3.4.2.2. An artificial or natural barrier (e.g. a fence in good repair or a fence combined with a cliff) that completely surrounds the hazardous waste storage area, combined with a means to control entrance at all times (e.g. an attendant, television monitors, locked gate, or controlled roadway access).

C6.3.3.4.3. Required Signs. A sign with the legend "Danger Unauthorized Personnel Keep Out," must be posted at each entrance to the hazardous waste storage area, and at other locations, in sufficient numbers to be seen from any approach to the hazardous waste storage area. The legend must be written in English and in any other language predominant in the area surrounding the installation, and must be legible from a distance of at least 25 feet. Existing signs with a legend other than "Danger Unauthorized Personnel Keep Out," may be used if the legend on the sign indicates that only authorized personnel are allowed to enter the hazardous waste storage area, and entry to it can be dangerous.

C6.3.3.5. Required Aisle Space. Aisle space must allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency. Containers must not obstruct an exit.

C6.3.3.6. Access to Communications or Alarm System

C6.3.3.6.1. General. Whenever hazardous waste is being poured, mixed, or otherwise handled, all personnel involved in the operation must have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another person.

C6.3.3.6.2. If there is only one person on duty at the HWSA premises, that person must have immediate access to a device, such as a telephone (immediately available at the scene of operation) or a hand-held two-way radio, capable of summoning external emergency assistance.

C6.3.3.7. Required Equipment. All HWSAs must be equipped with the following:

C6.3.3.7.1. An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to HWSA personnel.

C6.3.3.7.2. A device, such as an intrinsically safe telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from installation security, fire departments, or emergency response teams.

C6.3.3.7.3. Portable fire extinguishers, fire control equipment appropriate to the material in storage (including special extinguishing equipment as needed, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment.

C6.3.3.7.4. Water at adequate volume and pressure to supply water hose streams, foam producing equipment, automatic sprinklers, or water spray systems.

C6.3.3.7.5. Readily available personal protective equipment appropriate to the materials stored, eyewash and shower facilities.

C6.3.3.7.6. Testing and Maintenance of Equipment. All HWSA communications alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, must be maintained to ensure its proper operation in time of emergency.

C6.3.3.8. General Inspection Requirements

C6.3.3.8.1. General. The installation must inspect the HWSA for malfunctions and deterioration, operator errors, and discharges that may be causing, or may lead to, a release of hazardous waste constituents to the environment or threat to human health. The inspections must be conducted often enough to identify problems in time to correct them before they harm human health or the environment.

C6.3.3.8.2. Types of Equipment Covered. Inspections must include all equipment and areas involved in storage and handling of hazardous waste, including all containers and container storage areas, tank systems and associated piping, and all monitoring equipment, safety and emergency equipment, security devices, and operating and structural equipment (such as dikes and sump pumps) that are important to preventing, detecting, or responding to environmental or human health hazards.

C6.3.3.8.3. Inspection Schedule. Inspections must be conducted according to a written schedule that is kept at the HWSA. The schedule must identify the types of problems (e.g., malfunctions or deterioration) that are to be looked for during the inspection (e.g., inoperative sump pump, leaking fitting, eroding dike, etc.).

C6.3.3.8.4. Frequency of Inspections. Minimum frequencies for inspecting containers and container storage areas are found in subparagraph C6.3.4.1.5. Minimum frequencies for inspecting tank systems are found in subparagraph C6.3.7.5.2. For equipment not covered by those sections, inspection frequency should be based on the rate of possible deterioration of the equipment and probability of an environmental or human health incident if the deterioration or malfunction or any operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use.

C6.3.3.8.5. Remedy of Problems Revealed by Inspection. The installation must remedy any deterioration or malfunction of equipment or structures that the inspection reveals on a schedule, which

ensures that the problem does not lead to an environmental or human health hazard. Where a hazard is imminent or has already occurred, action must be taken immediately.

C6.3.3.8.6. Maintenance of Inspection Records. The installation must record inspections in an inspection log or summary, and keep these records for at least three years from the date of inspection. At a minimum, these records must include the date and time of inspection, the name of the inspector, a notation of the observations made, and the date and nature of any repairs or other remedial actions.

C6.3.3.9. Personnel Training. Personnel assigned HWSA duty must successfully complete an appropriate hazardous waste training program in accordance with the training requirements in subsection C6.3.9 of this Chapter.

C6.3.3.10. Storage Practices

C6.3.3.10.1. Compatible Storage. The storage of ignitable, reactive, or incompatible wastes must be handled so that it does not threaten human health or the environment. Dangers resulting from improper storage of incompatible wastes include generation of extreme heat, fire, explosion and generation of toxic gases.

C6.3.3.10.2. General requirements for ignitable, reactive, or incompatible wastes. The HWSA manager must take precautions to prevent accidental ignition or reaction of ignitable or reactive waste. This waste must be separated and protected from sources of ignition or reaction including but not limited to: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks (static, electrical, or mechanical), spontaneous ignition (e.g., from heat-producing chemical reactions), and radiant heat. While ignitable or reactive waste is being handled, the HWSA personnel must confine smoking and open flame to specially designated locations. "No smoking" signs, or appropriate icon, must be conspicuously placed wherever there is a hazard from ignitable or reactive waste. In areas where access by non-English speaking persons is expected, the "no smoking" legend must be written in English and in any other language predominant in the area. Water reactive waste cannot be stored in the same area as flammable and combustible liquid.

C6.3.3.11. Closure and Closure Plans

C6.3.3.11.1. Closure. At closure of a HWSA, hazardous waste and hazardous waste residues must be removed from the containment system including remaining containers, liners, and bases. Closure should be done in a manner, which eliminates or minimizes the need for future maintenance or the potential for future releases of hazardous waste and according to the Closure Plan.

C6.3.3.11.2. Closure Plan. Closure plans will be developed before a new HWSA is opened. Each existing HWSA also will develop a closure plan. Concurrent with the decision to close the HWSA the plan will be implemented. The closure plan will include: estimates of the storage capacity of hazardous waste, steps to be taken to remove or decontaminate all waste residues, and estimate of the expected date for closure.

C6.3.4. Use and Management of Containers

C6.3.4.1. Container Handling and Storage. To protect human health and the environment, the following guidelines will apply when handling and storing hazardous waste containers.

C6.3.4.1.1. Containers holding hazardous waste will be in good condition, free from severe rusting, bulging or structural defects.

C6.3.4.1.2. Containers used to store hazardous waste, including overpack containers, must be compatible with the materials stored.

C6.3.4.1.3. Management of Containers

C6.3.4.1.3.1. A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.

C6.3.4.1.3.2. A container holding hazardous waste must not be opened, handled, or stored in a manner that may rupture the container or cause it to leak.

C6.3.4.1.3.3. Containers of flammable liquids must be grounded when transferring flammable liquids from one container to the other.

C6.3.4.1.4. Containers holding hazardous waste will be marked with a hazardous waste marking, and a label indicating the hazard class of the waste contained (i.e., flammable, corrosive, etc.).

C6.3.4.1.5. Areas where containers are stored must be inspected weekly for leaking containers and for deterioration of containers and the containment system caused by corrosion or other factors. Secondary containment systems will be inspected for defects and emptied of accumulated releases or retained storm water.

C6.3.4.2. Containment. Container storage areas must have a secondary containment system meeting the following:

C6.3.4.2.1. Must be sufficiently impervious to contain leaks, spills and accumulated precipitation until the collected material is detected and removed,

C6.3.4.2.2. The secondary containment system must have sufficient capacity to contain 10% of the volume of stored containers or the volume of the largest container, whichever is greater.

C6.3.4.2.3. Storage areas that store containers holding only wastes that do not contain free liquids need not have a containment system as described in subparagraph C6.3.4.2.1, provided the storage area is sloped or is otherwise designed and operated to drain and remove liquid resulting from precipitation, or the containers are elevated or are otherwise protected from contact with accumulated liquid.

C6.3.4.2.4. Rainwater captured in secondary containment areas should be inspected and/or tested prior to release. The inspection or testing must be reasonably capable of detecting contamination by the hazardous waste in the containers. Contaminated water shall be treated as hazardous waste until determined otherwise.

C6.3.4.3. Special Requirements for Ignitable or Reactive Waste. Areas that store containers holding ignitable or reactive waste must be located at least 15 meters (50 feet) inside the installation's boundary.

C6.3.4.4. Special Requirements for Incompatible Wastes

C6.3.4.4.1. Incompatible wastes and materials must not be placed in the same container.

C6.3.4.4.2. Hazardous waste must not be placed in an unwashed container that previously held an incompatible waste or material.

C6.3.4.4.3. A storage container holding a hazardous waste that is incompatible with any waste or other materials stored nearby in other containers, piles, open tanks, or surface impoundments must be separated from the other materials or protected from them by means of a dike, berm, wall, or other device.

C6.3.5. Recordkeeping Requirements

C6.3.5.1. Turn-in documents, e.g., DD 1348-1A or manifests, must be maintained for 3 years.

C6.3.5.2. Hazardous Waste Log. A written log will be maintained at the HWSA to record all hazardous waste handled and should consist of the following:

C6.3.5.2.1. Name/address of generator;

C6.3.5.2.2. Description and hazard class of the hazardous waste;

C6.3.5.2.3. Number and types of containers;

C6.3.5.2.4. Quantity of hazardous waste;

C6.3.5.2.5. Date stored;

C6.3.5.2.6. Storage location; and

C6.3.5.2.7. Disposition data, to include: dates received, sealed and transported, and transporter used.

C6.3.5.3. The Hazardous Waste Log will be available to emergency personnel in the event of a fire or spill. Logs will be maintained until closure of the installation.

C6.3.5.4. Inspection Logs. Records of inspections should be maintained for a period of three years.

C6.3.5.5. Manifests. Manifests of incoming and outgoing hazardous wastes will be retained for a period of 3 years.

C6.3.5.6. Waste Analysis/Characterization Records will be retained until 3 years after closure of the HWSA.

C6.3.5.7. The installation will maintain records, identified in paragraphs C6.3.5.1, C6.3.5.5, and C6.3.5.6, for HWAPs on the installation.

C6.3.6. Contingency Plan

C6.3.6.1. Each installation will have a contingency plan that describes actions to be taken to contain and clean up spills and releases of hazardous waste in accordance with the provisions of Chapter 18.

C6.3.6.2. Copies of Contingency Plan. A current copy of the installation contingency plan must be:

C6.3.6.2.1. Maintained at each HWSA and HWAP, (HWAPs need maintain only portions of the contingency plan which are pertinent to their facilities and operation.), and;

C6.3.6.2.2. Submitted to all police departments, fire departments, hospitals, and emergency response teams identified in the plan, and which the plan relies upon to provide emergency services. Plans should be available in both English and the host nation languages.

C6.3.7. Tank Systems. The following criteria apply to all storage tanks containing hazardous wastes. See Chapter 19 for criteria dealing with underground storage tanks containing petroleum, oil and lubricants and hazardous substances.

C6.3.7.1. Application. The requirements of this part apply to HWSAs that use tank systems for storing or treating hazardous waste. Tank systems that are used to store or treat hazardous waste which contains no free liquids and are situated inside a building with an impermeable floor are exempted from the requirements in paragraph C6.3.7.4, titled "Containment and Detection of Releases." Tank systems, including sumps, that serve as part of a secondary containment system to collect or contain releases of hazardous wastes are exempted from the requirements in paragraph C6.3.7.4.

C6.3.7.2. Assessment of Existing Tank System's Integrity. For each existing tank system that does not have secondary containment meeting the requirements of paragraph C6.3.7.4, installations must determine annually whether the tank system is leaking or is fit for use. Installations must obtain, and keep on file at the HWSA, a written assessment of tank system integrity reviewed and certified by a competent authority.

C6.3.7.3. Design and Installation of New Tank Systems or Components. Managers of HWSAs installing new tank systems or components must obtain a written assessment, reviewed and certified by a competent authority attesting that the tank system has sufficient structural integrity and is acceptable for the storing and treating of hazardous waste. The assessment must show that the foundation, structural support, seams, connections, and pressure controls (if applicable) are adequately designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be stored or treated, and corrosion protection to ensure that it will not collapse, rupture, or fail.

C6.3.7.4. Containment and Detection of Releases. In order to prevent the release of hazardous waste or hazardous constituents to the environment, secondary containment that meets the requirements of this section must be:

C6.3.7.4.1. Provided for all new tank systems or components, prior to their being put into service;

C6.3.7.4.2. Provided for those existing tank systems when the tank system annual leak test detects leakage;

C6.3.7.4.3. Provided for tank systems that store or treat hazardous wastes by 1 January 1999;

C6.3.7.4.4. Designed, installed, and operated to prevent any migration of wastes or accumulated liquid out of the system to the soil, groundwater, or surface water at any time during the use

of the tank system; and capable of detecting and collecting releases and accumulated liquid until the collected material is removed; and

C6.3.7.4.5. Constructed to include one or more of the following; a liner external to the tank, a vault, or double-walled tank.

C6.3.7.5. General Operating Requirements

C6.3.7.5.1. Hazardous wastes or treatment reagents must not be placed in a tank system if they could cause the tank, its ancillary equipment, or the containment system to rupture, leak, corrode, or otherwise fail.

C6.3.7.5.2. The installation must inspect and log at least once each operating day:

C6.3.7.5.2.1. The above-ground portions of the tank system, if any, to detect corrosion or releases of waste;

C6.3.7.5.2.2. Data gathered from monitoring and leak detection equipment (e.g., pressure or temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design; and

C6.3.7.5.2.3. The construction materials and the area immediately surrounding the externally accessible portion of the tank system, including the secondary containment system (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation).

C6.3.7.5.3. The installation must inspect cathodic protection systems to ensure that they are functioning properly. The proper operation of the cathodic protection system must be confirmed within 6 months after initial installation and annually thereafter. All sources of impressed current must be inspected and/or tested, as appropriate, or at least every other month. The installation manager must document the inspections in the operating record of the HWSA.

C6.3.7.6. Response to Leaks or Spills and Disposition of Leaking or Unfit-For-Use Tank Systems. A tank system or secondary containment system from which there has been a leak or spill, or which is unfit for use, must be removed from service immediately and repaired or closed. Installations must satisfy the following requirements:

C6.3.7.6.1. Cessation of use; prevention of flow or addition of wastes. The installation must immediately stop the flow of hazardous waste into the tank system or secondary containment system and inspect the system to determine the cause of the release.

C6.3.7.6.2. Containment of visible releases to the environment. The installation must immediately conduct an inspection of the release and, based upon that inspection:

C6.3.7.6.2.1. Prevent further migration of the leak or spill to soils or surface water; and

C6.3.7.6.2.2. Remove and properly dispose of any contamination of the soil or surface water.

C6.3.7.6.2.3. Remove free product to the maximum extent possible.

C6.3.7.6.2.4. Continue monitoring and mitigating for any additional fire and safety hazards posed by vapors or free products in subsurface structures.

C6.3.7.6.3. Make required notifications and reports.

C6.3.7.7. Closure. At closure of a tank system, the installation must remove or decontaminate hazardous waste residues, contaminated containment system components (liners, etc.), contaminated soils to the extent practicable, and structures and equipment.

C6.3.8. Standards for the Management of Used Oil and Lead-Acid Batteries

C6.3.8.1. Used Oil Burned for Energy Recovery. Used oil fuel may be burned only in the following devices:

C6.3.8.1.1. Industrial furnaces,

C6.3.8.1.2. Boilers that are identified as follows:

C6.3.8.1.2.1. Industrial boilers located on the site of a facility engaged in a manufacturing process where substances are transformed into new products, including the component parts of products, by mechanical or chemical processes;

C6.3.8.1.2.2. Utility boilers used to produce electric power, steam or heated or cooled air or other gases or fluids;

C6.3.8.1.2.3. Used oil-fired space heaters provided that:

C6.3.8.1.2.3.1. The heater burns only used oil that the installation generates;

C6.3.8.1.2.3.2. The heater is designed to have a maximum capacity of not more than 0.5 million BTU per hour; and

C6.3.8.1.2.3.3. The combustion gases from the heater are properly vented to the ambient air.

C6.3.8.2. Prohibitions on Dust Suppression or Road Treatment. Used oil, hazardous waste, or used oil contaminated with any hazardous waste will not be used for dust suppression or road treatment.

C6.3.8.3. Lead-acid batteries that are to be recycled will be managed as hazardous material. Lead-acid batteries, which are not recycled, will be managed as hazardous waste.

C6.3.9. Hazardous Waste Training

C6.3.9.1. Application. Personnel and their supervisors that are assigned duties involving actual or potential exposure to hazardous waste must successfully complete an appropriate training program prior to assuming those duties. Personnel assigned to such duty must work under direct supervision until they have completed appropriate training. Additional guidance is contained in DoDI 6050.5, "DoD Hazard Communication Program".

C6.3.9.2. Refresher Training. All personnel performing HW duties must successfully complete annual refresher hazardous waste training.

C6.3.9.3. Training Contents and Requirements. The training program must:

C6.3.9.3.1. Include sufficient information to enable personnel to perform their assigned duties and fully comply with pertinent HW requirements.

C6.3.9.3.2. Be conducted by qualified trainers who have completed an instructor training program in the subject, have comparable academic credentials, or experience.

C6.3.9.3.3. Be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems.

C6.3.9.3.4. Address the following areas in particular for personnel whose duties include hazardous waste handling and management:

C6.3.9.3.4.1. Emergency procedures (response to fire/explosion/ spills; use of communications/alarm systems; body and equipment clean up);

C6.3.9.3.4.2. Drum/container handling/storage; safe use of HW equipment; proper sampling procedures:

C6.3.9.3.4.3. Employee Protection. Personal Protective Equipment (PPE), safety and health hazards, hazard communication, worker exposure; and

C6.3.9.3.4.4. Recordkeeping. Recordkeeping, security, inspections, contingency plans, storage requirements, transportation requirements.

C6.3.9.4. Documentation of Training. Installations must document all hazardous waste training for each individual assigned duties involving actual or potential exposure to hazardous waste. Updated training records on personnel assigned duties involving actual or potential exposure to hazardous waste must be kept by the HWSA manager or the responsible installation office and retained for at least three years after termination of duty of these personnel.

C6.3.10. Hazardous Waste Disposal

C6.3.10.1. All DoD hazardous waste should normally be disposed of through the Defense Reutilization and Marketing Service (DRMS). A decision not to use the DRMS for hazardous waste disposal may be made in accordance with DoD Directive 4001.1 for best accomplishment of the installation mission, but should be concurred in by the component chain of command to ensure that installation contracts and disposal criteria are at least as protective as criteria used by DRMS.

C6.3.10.2. DoD Components must ensure that wastes generated by DoD operations and considered hazardous under either U.S. law or host nation law are not disposed of in the host nation unless the disposal is conducted in accordance with the following:

C6.3.10.2.1. When hazardous wastes cannot be disposed of in accordance with the final governing standards within the host nation, it will be either retrograded to the U.S. or, if permissible under international agreements, transferred to another country outside the U.S. where it can be disposed of in an environmentally-sound manner and in compliance with the final governing standards applicable to the country of disposal, if any exist. Transshipment of hazardous wastes to another country other than

the U.S. for disposal must be approved by, at a minimum, the Deputy Under Secretary of Defense for Installations and Environment [DUSD(IE)].

C6.3.10.2.2. The determination of whether particular DoD-generated hazardous waste may be disposed of in a host nation will be made by the DoD Environmental Executive Agent, in coordination with the unified combatant commander, the Director of Defense Logistics Agency (DLA), or other relevant DoD Components, and the Chief of the U.S. Diplomatic Mission.

C6.3.10.3. Disposal Procedures

C6.3.10.3.1. The determination of whether hazardous wastes may be disposed of in a host nation must include consideration of whether the means of treatment and/or containment technologies employed in the host nation program, as enacted and enforced, effectively mitigate the hazards of such waste to human health and the environment and must consider whether the host nation program includes:

C6.3.10.3.1.1. An effective system for tracking the movement of hazardous waste to its ultimate destination.

C6.3.10.3.1.2. An effective system for granting authorization or permission to those engaged in the collection, transportation, storage, treatment, and disposal of HW.

C6.3.10.3.1.3. Appropriate standards and limitations on the methods that may be used to treat and dispose of HW.

C6.3.10.3.1.4. Standards designed to minimize the possibility of fire, explosion, or any unplanned release or migration of HW or its constituents to air, soil, surface, or groundwater.

C6.3.10.3.2. The Environmental Executive Agent must also be satisfied, either through reliance on the host nation regulatory system and/or provisions in the disposal contracts, that:

C6.3.10.3.2.1. Persons and facilities in the waste management process have demonstrated the appropriate level of training and reliability; and

C6.3.10.3.2.2. Effective inspections, monitoring, and recordkeeping will take place.

C6.3.10.4. Host nation facilities that either store, treat, or dispose of DoD-generated waste must be evaluated and approved by the host nation as being in compliance with their regulatory requirements. This evaluation and approval may consist of having a valid permit or host nation equivalent for the hazardous waste that will be handled.

C6.3.10.5. Hazardous waste will be recycled or reused to the maximum extent practical. Safe and environmentally acceptable methods will be used to identify, store, prevent leakage, and dispose of hazardous waste, to minimize risks to health and the environment.

C6.3.10.6. No hazardous wastes or other materials that are toxic or that represent a danger to human or animal life, nor to the vegetation, may be disposed on land in Greenland.

C6.3.10.7. No hazardous wastes or other materials that are toxic or that represent a danger to human or animal life, nor to vegetation, may be incinerated in Greenland.

C6.3.10.8. Treatment Technologies. The following treatment technologies may be used to reduce the volume or hazardous characteristics of wastes. Wastes that are categorized as hazardous on the basis of subsection C20.1. and which, after treatment as described herein no longer exhibit any hazardous characteristic, may be disposed of as solid waste. Treatment residues of wastes categorized as hazardous under any other subsection of Chapter 20 (Appendix 1) will continue to be managed as hazardous wastes under the criteria of these Standards, including those for disposal. The treatment technologies listed below are provided as baseline treatment/disposal technologies for use in determining suitability of host nation disposal alternatives. These technologies should not be implemented without consultation with the Environmental Executive Agent, or the Combatant Commander, if there is no Environmental Executive Agent.

C6.3.10.8.1. Organics

C6.3.10.8.1.1. Fuel substitution where the units are operated such that destruction of hazardous constituents are at least as efficient, and hazardous emissions are no greater than those produced by incineration.

C6.3.10.8.1.2. Biodegradation. Wastes are degraded by microbial action. Such units will be operated under aerobic or anaerobic conditions so that the concentrations of a representative compound or indicator parameter (e.g., total organic carbon) has been substantially reduced in concentration. The level to which biodegradation must occur and the process time vary depending on the hazardous waste being biodegraded.

C6.3.10.8.1.3. Recovery. Wastes are treated to recover organic compounds. This will be done using, but not limited to, one or more of the following technologies: distillation; thin film evaporation; steam stripping; carbon adsorption; critical fluid extraction; liquid extraction; precipitation/crystallization or phase separation techniques, such as decantation, filtration and centrifugation when used in conjunction with one of the above techniques.

C6.3.10.8.1.4. Chemical Degradation. The wastes are chemically degraded in such a manner so as to destroy hazardous constituents and control harmful emissions.

C6.3.10.8.2. Heavy Metals

C6.3.10.8.2.1. Stabilization or Fixation. Wastes are treated in such a way that soluble heavy metals are fixed by oxidation/reduction, or by some other means which renders the metals immobile in a landfill environment.

C6.3.10.8.2.2. Recovery. Wastes are treated to recover the metal fraction by thermal processing, precipitation, exchange, carbon absorption, or other techniques that yield non-hazardous levels of heavy metals in the residuals.

C6.3.10.8.3. Reactives. Any treatment that changes the chemical or physical composition of a material such that it no longer exhibits the characteristic for reactivity defined in Chapter 20 (Appendix 1).

C6.3.10.8.4. Corrosives. Corrosive wastes as defined in C20.1.3, will be neutralized to a pH value between 6.0 and 9.0. Other acceptable treatments include recovery, incineration, chemical or electrolytic oxidation, chemical reduction, or stabilization.

C6.3.10.8.5. Batteries. Mercury, nickel-cadmium, lithium, and lead-acid batteries will be processed in accordance with subparagraphs C6.3.10.8.2.1 or C6.3.10.8.2.2 to stabilize, fix or recover heavy metals, as appropriate, and in accordance with subparagraph C6.3.10.8.4 to neutralize any corrosives before disposal.

C6.3.10.9. DoD generators of HW shall not treat HW at the point of generation except for elementary neutralization. This shall not preclude installations from treating HW in accord with subsections C6.3.10.7 and C6.3.10.8.

C7. CHAPTER 7SOLID WASTEC7.1. Scope

This Chapter contains criteria to ensure that solid wastes are identified, classified, collected, transported, stored, treated, and disposed of safely and in a manner protective of human health and the environment. These criteria apply to residential and commercial solid waste generated at the installation level. These criteria are part of integrated waste management. Policies concerning the recycling portion of integrated waste management are found in DoDI 4715.4, "Pollution Prevention," and service solid waste management manuals. The criteria in this Chapter deal with general solid waste. Criteria for specific types of solid waste that require special precautions are located in Chapter 6 (Hazardous Waste), Chapter 8 (Medical Waste), Chapter 14 (PCBs), and Chapter 11 (Pesticides).

C7.2. Definitions

C7.2.1. Bulky Waste. Large items of solid waste such as household appliances, furniture, large auto parts, trees, branches, stumps, and other oversize wastes whose large size precludes or complicates their handling by normal solid wastes collection, processing or disposal methods.

C7.2.2. Carry-out Collection. Collection of solid waste from a storage area proximate to the dwelling unit(s) or establishment where generated.

C7.2.3. Collection. The act of consolidating solid wastes (or materials which have been separated for the purpose of recycling) from various locations.

C7.2.4. Collection Frequency. The number of times collection is provided in a given period of time.

C7.2.5. Commercial Solid Waste. All types of solid wastes generated by stores, offices, restaurants, warehouses, and other non-manufacturing activities, excluding residential and industrial wastes.

C7.2.6. Compactor Collection Vehicle. A vehicle with an enclosed body containing mechanical devices that conveys solid waste into the main compartment of the body and compresses it into a smaller volume of greater density.

C7.2.7. Construction and Demolition Waste. The waste building materials, packaging and rubble resulting from construction, remodeling, repair and demolition operations on pavements, houses, commercial buildings and other structures.

C7.2.8. Curb Collection. Collection of solid waste placed adjacent to a street.

C7.2.9. Cover Material. Material that is used to cover compacted solid wastes in a land disposal site.

C7.2.10. Daily Cover. Soil that is spread and compacted or synthetic material that is placed on the top and side slopes of compacted solid waste at least at the end of each operating day in order to control vectors, fire, moisture, and erosion and to assure an aesthetic appearance. Mature compost or other natural material may be substituted for soil if soil is not reasonably available in the vicinity of the landfill and the substituted material will control vectors, fire, moisture, and erosion and will assure an aesthetic appearance.

C7.2.11. Final Cover. A layer of soil, mature compost, other natural material (or synthetic material with an equivalent minimum permeability) that is applied to the landfill after completion of a cell or trench, including a layer of material that will sustain native vegetation, if any.

C7.2.12. Food Waste. The organic residues generated by the handling, storage, sale, preparation, cooking, and serving of foods, commonly called garbage.

C7.2.13. Generation. The act or process of producing solid waste.

C7.2.14. Hazardous Wastes. Refer to Chapter 6, Hazardous Waste.

C7.2.15. Industrial Solid Waste. The solid waste generated by industrial processes and manufacturing.

C7.2.16. Institutional Solid Waste. Solid waste generated by educational, health care, correctional, and other institutional facilities.

C7.2.17. Land Application Unit. An area where wastes are applied onto or incorporated into the soil surface (excluding manure spreading operations) for agricultural purposes or for treatment or disposal.

C7.2.18. Lower Explosive Limit. The lowest percent by volume of a mixture of explosive gases in air that will propagate a flame at 25 degrees Celsius and atmospheric pressure.

C7.2.19. Municipal Solid Waste. Normally, residential and commercial solid waste generated within a community, not including yard waste.

C7.2.20. Municipal Solid Waste Landfill Unit (MSWLF). A discrete area of land or an excavation, on or off the installation, that receives household waste, and that is not a land application unit, surface impoundment, injection well, or waste pile. A MSWLF unit also may receive other types of wastes, such as commercial solid waste and industrial waste.

C7.2.21. Open Burning. Burning of solid wastes in the open, such as in an open dump.

C7.2.22. Open Dump. A land disposal site at which solid wastes are disposed of in a manner that does not protect the environment, is susceptible to open burning, and is exposed to the elements, vectors, and scavengers.

C7.2.23. Residential Solid Waste. The wastes generated by the normal activities of households, including, but not limited to, food wastes, rubbish, ashes, and bulky wastes.

C7.2.24. Rubbish. A general term for solid waste, excluding food wastes and ashes, taken from residences, commercial establishments and institutions.

C7.2.25. Sanitary Landfill. A land disposal site employing an engineered method of disposing of solid wastes on land in a manner that minimizes environmental hazards by spreading the solid wastes in thin layers, compacting the solid wastes to the smallest practical volume, and applying and compacting cover material at the end of each operating day.

C7.2.26. Satellite Vehicle. A small collection vehicle that transfers its load into a larger vehicle operating in conjunction with it.

C7.2.27. Scavenging. The uncontrolled and unauthorized removal of materials at any point in the solid waste management system.

C7.2.28. Service Solid Waste Management Manual. Navy NAVFAC MO-213, Air Force AFR 91-8, Army TM 5-634, or their successor documents.

C7.2.29. Sludge. The accumulated semi-liquid suspension of settled solids deposited from wastewaters or other fluids in tanks or basins. It does not include solids or dissolved material in domestic sewage or other significant pollutants in water resources, such as silt, dissolved or suspended solids in industrial wastewater effluent, dissolved materials in irrigation return flows, or other common water pollutants.

C7.2.30. Solid Wastes. Garbage, refuse, sludge and other discarded materials, including solid, semi-solid, liquid, and contained gaseous materials resulting from industrial and commercial operations and from community activities. Solid waste is limited to discarded materials or substances that are non-toxic and that represent no danger to human or animal life, nor to the vegetation. It does not include solids or dissolved material in domestic sewage or other significant pollutants in water resources, such as silt, dissolved or suspended solids in industrial wastewater effluent, dissolved materials in irrigation return flows or other common water pollutants.

C7.2.31. Solid Waste Storage Container. A receptacle used for the temporary storage of solid waste while awaiting collection.

C7.2.32. Stationary Compactor. A powered machine which is designed to compact solid waste or recyclable materials, and which remains stationary when in operation.

C7.2.33. Storage. The interim containment of solid waste after generation and prior to collection for ultimate recovery or disposal.

C7.2.34. Street Wastes. Material picked up by manual or mechanical sweepings of alleys, streets, and sidewalks; wastes from public waste receptacles; and material removed from catch basins.

C7.2.35. Transfer Station. A site at which solid wastes are concentrated for transport to a processing facility or land disposal site. A transfer station may be fixed or mobile.

C7.2.36. Vector. A carrier that is capable of transmitting a pathogen from one organism to another.

C7.2.37. Yard Waste. Grass and shrubbery clippings, tree limbs, leaves, and similar organic materials commonly generated in residential yard maintenance (also known as green waste).

C7.3. Criteria

C7.3.1. DoD solid wastes will be treated, stored, and disposed of in facilities that have been evaluated against subsections C7.3.12, C7.3.14, and C7.3.15 of this Chapter. These evaluated facilities will be used to the maximum extent practical.

C7.3.2. Installations will cooperate with host nation officials, to the extent possible, in the solid waste management planning process.

C7.3.3. Installations will develop and implement a solid waste management strategy to reduce solid waste disposal. This strategy could include recycling, composting and waste minimization efforts.

Additionally, prior to disposal, the United States authorities must determine that such material may not be usefully or economically redistributed or returned to the United States.

C7.3.4. All solid wastes or materials which have been separated for the purpose of recycling will be stored in such a manner that they do not constitute a fire, health or safety hazard or provide food or harborage for vectors, and will be contained or bundled so as not to result in spillage.

C7.3.5. Storage of bulky wastes will include, but will not be limited to, removing all doors from large household appliances and covering the items to reduce both the problems of an attractive nuisance, and the accumulation of solid waste and water in and around the bulky items. Bulky wastes will be screened for the presence of ozone depleting substances as defined in Chapter 2 or hazardous constituents as defined in Chapter 6. Readily detachable or removable hazardous waste will be segregated and disposed of in accordance with Chapters 6, 14, and 15.

C7.3.6. In the design of all buildings or other facilities that are constructed, modified, or leased after the effective date of these guidelines, there will be provisions for storage in accordance with these guidelines that will accommodate the volume of solid waste anticipated. Storage areas will be easily cleaned and maintained, and will allow for safe, efficient collection.

C7.3.7. Storage containers should be leakproof, waterproof, and vermin-proof, including sides, seams and bottoms and be durable enough to withstand anticipated usage and environmental conditions without rusting, cracking or deforming in a manner that would impair serviceability. Storage containers should have functional lids.

C7.3.8. Containers should be stored on a firm, level, well drained surface which is large enough to accommodate all of the containers and which is maintained in a clean, spillage-free condition. Containers should be placed in close proximity to the individual building or property and in a place which is easily accessible for the users and the waste collectors and to which there is a free access road throughout the year.

C7.3.9. Recycling programs will be instituted on DoD installations in accordance with the policies in reference (g).

C7.3.10. Approval for New or Expanded MSWLFs. The location of any new MSWLF units will be mutually agreed upon by the appropriate Danish and Greenlandic authorities and the appropriate base commander or his designee. This mutual agreement as to the location of new MSWLF must be in writing, and signed by appropriate and duly authorized representatives of the parties. The installations will contact AFSPC/XPI regarding the wording and proper signature levels for this agreement. However, installations will not initiate discussions with the Danish and Greenlandic Authorities regarding the establishment of new landfills or expanding existing waste landfill units, without first notifying the EEA and obtaining approval of the Combatant Commander with responsibility for the area where the landfill would be located. The installation must provide justification that unique circumstances mandate a new unit.

C7.3.11. Design of New MSWLFs. The techniques to be employed in establishing and maintaining new DoD MSWLF units must conform to common standards for Greenland established by the appropriate Danish and Greenlandic authorities or to specific standards agreed by mutual consent among the authorities concerned. The design and operational standards must be documented in writing, and signed by the appropriate and duly authorized representatives of the parties. Before any contact with the Danish and Greenlandic authorities on appropriate design and operational standards, the installation must first contact the EEA regarding their position on appropriate landfill standards and on the appropriate

level of negotiations with the Danish and Greenlandic authorities. The EEA will look to design standards which incorporate the broad factors set forth below in this subsection, as well as operational standards which are at least as protective as the standards set forth in C7.3.12.

C7.3.11.1. Location restrictions in regard to airport safety (i.e., bird hazards), floodplains, wetlands, aquifers, seismic zones, and unstable areas;

C7.3.11.2. Procedures for excluding hazardous waste;

C7.3.11.3. Cover material criteria (e.g., daily cover), disease vector control, explosive gas control, air quality criteria (e.g., no open burning), access requirements, liquids restrictions and record keeping requirements; and

C7.3.11.4. Inspection program.

C7.3.11.5. Liner and leachate collection system designed consistent with location to prevent groundwater contamination that would adversely affect human health.

C7.3.11.6. A groundwater monitoring system unless the installation operating the landfill, after consultation with the Environmental Executive Agent, determines that there is no reasonable potential for migration of hazardous constituents from the MSWLF to the uppermost aquifer during the active life of the facility and the post-closure care period.

C7.3.12. Operation of MSWLFs. Installations operating MSWLF units will:

C7.3.12.1. Use standard sanitary landfill techniques of spreading and compacting solid wastes and placing daily cover over disposed solid waste at the end of each operating day.

C7.3.12.2. Establish criteria for unacceptable wastes based on site-specific factors such as hydrology, chemical and biological characteristics of the waste, available alternative disposal methods, environmental and health effects, and the safety of personnel.

C7.3.12.3. Implement a program to detect and prevent the disposal of hazardous wastes, infectious wastes, polychlorinated biphenyl (PCB) wastes, and wastes determined unsuitable for the specific MSWLF.

C7.3.12.4. Investigate options for composting of MSW as an alternative to landfilling or treatment prior to landfilling.

C7.3.12.5. Prohibit open burning, except for infrequent burning of agricultural wastes, silvicultural wastes, land-clearing debris, diseased trees, or debris from emergency clean-up operations. All burning activities will be conducted in incinerators meeting the air quality requirements in Chapter 2.

C7.3.12.6. Develop procedures for dealing with yard waste and construction debris that keeps it out of MSWLF units to the maximum extent possible (e.g., composting, recycling).

C7.3.12.7. Operate in a manner to protect the health and safety of personnel associated with the operation.

C7.3.12.8. Maintain conditions that are unfavorable for the harboring, feeding, and breeding of disease vectors.

C7.3.12.9. Ensure that methane gas generated by the MSWLF unit does not exceed 25% of the lower explosive limit for methane in structures on or near the MSWLF.

C7.3.12.10. Operate in an aesthetically acceptable manner.

C7.3.12.11. Operate in a manner to protect aquifers.

C7.3.12.12. Control public access to landfill facilities.

C7.3.12.13. Prohibit the disposal of bulk or non-containerized liquids if possible.

C7.3.12.14. Maintain records on the preceding criteria.

C7.3.13. Closure and Post-Closure Operations. Closure of landfills must be agreed upon, in writing, by both the U.S. and Danish/Greenlandic Authorities. The appropriate host-nation authorities will have responsibility for perpetual maintenance of the landfills after the landfills have been closed. The U.S. supports closure standards that, at a minimum, are at least as protective of the environment as standards set forth in C7.3.13.1 through C7.3.13.4 below. The U.S. will prepare a closure plan in accordance with paragraph C7.3.13.5 below.

C7.3.13.1. Install a final cover system that is designed to minimize infiltration and erosion.

C7.3.13.2. Ensure that the infiltration layer is comprised of a minimum of 46 cm (18 inches) of earthen material, geotextiles, or combination thereof, that have a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present, or a permeability no greater than .00005 cm/sec, whichever is less.

C7.3.13.3. Ensure that the erosion layer consists of a minimum of 21 cm (8 inches) of earth material that is capable of sustaining native plant growth.

C7.3.13.4. If possible, revegetate the final cap with native plants that are compatible with the landfill design, including the liner.

C7.3.13.5. Prepare a written closure plan that includes, at a minimum, the closure standards agreed to by the U.S. and Danish/Greenlandic Authorities, and acknowledges full Danish/Greenlandic responsibility and liability for the landfill after the U.S. has implemented the closure actions. The closure plan must describe the process that documents U.S. completion of the closure actions, and turnover of the landfill responsibility and liability to the Danish/Greenlandic Authorities. The closure plan must also include a survey plot showing the exact site location. The plan should be submitted to AFSPC/CEV for approval, and will be kept as part of the installation's permanent records.

C7.3.14. Open Burning. Open burning will not be the regular method of solid waste disposal. However, non-hazardous solid waste that can be properly burned will be incinerated rather than buried. Properly burned means the use of incinerators meeting air quality requirements in Chapter 2.

C7.3.15. A composting facility which is located on a DoD installation and which processes annually more than 5000 tons of sludge from a domestic wastewater treatment plant (See Chapter 4), will comply with the following criteria:

C7.3.15.1.1. Operators must maintain a record of the characteristics of the waste composted, sewage sludge and other materials, such as nutrient or bulking agents being composted including the source and volume or weight of the material.

C7.3.15.1.2. Access to the facility must be controlled. All access points must be secured when the facility is not in operation.

C7.3.15.1.3. By-products, including residuals and materials that can be recycled, must be stored to prevent vector intrusion and aesthetic degradation. Materials that are not composted must be removed periodically.

C7.3.15.1.4. Run-off water that has come in contact with composted waste, materials stored for composting, or residual waste must be diverted to a leachate collection and treatment system.

C7.3.15.1.5. The temperature and retention time for the material being composted must be monitored and recorded.

C7.3.15.1.6. Periodic analysis of the compost must be completed for the following parameters: percentage of total solids, volatile solids as a percentage of total solids, pH, ammonia, nitrate nitrogen, total phosphorous, cadmium, chromium, copper, lead, nickel, zinc, mercury and polychlorinated biphenyls.

C7.3.15.1.7. Compost must be produced by a process to further reduce pathogens. Two such acceptable methods are:

C7.3.15.1.7.1. Windrowing, which consists of an unconfined composting process involving periodic aeration and mixing such that aerobic conditions are maintained during the composting process; and

C7.3.15.1.7.2. The enclosed vessel method, which involves mechanical mixing of compost under controlled environmental conditions. The retention time in the vessel must be at least 72 hours with the temperature maintained at 55 degrees Celsius. A stabilization period of at least seven days must follow the decomposition period.

C7.3.16. Classification and Use of Compost from DoD Composting Facilities. Compost produced at a composting facility which is located on a DoD installation and which processes annually more than 5000 tons of sludge from a domestic wastewater treatment plant (See Chapter 4), must be classified as "Class A" or "Class B" based on the criteria below and, depending on this classification, shall be subject to the restrictions on certain uses.

C7.3.16.1. Class A compost must be stored until the compost is matured, i.e., 60 percent decomposition has been achieved. Class A compost may contain contaminant levels no greater than the levels indicated below. The compost must be stabilized and contain no greater amounts of inert material than indicated. Allowable average contaminant concentrations in milligrams per kilogram on a dry weight basis are:

PCB	1
Cadmium	10
Chromium	1,000
Copper	500
Lead	500
Mercury	5
Nickel	100
Zinc	1,000

C7.3.16.2. Class B compost consists of any compost generated which fails to meet Class A standards.

C7.3.16.3. Compost distribution and end use.

C7.3.16.3.1. Class A compost may be distributed for unrestricted use, including agricultural applications.

C7.3.16.3.2. Class B compost may not be distributed for agricultural applications.

C8. CHAPTER 8MEDICAL WASTE MANAGEMENTC8.1. Scope

This Chapter contains criteria for the management of medical waste at medical, dental, research and development and, veterinary facilities generated in the diagnosis, treatment, or immunization of human beings or animals or in the production or testing of biologicals subject to certain exclusions. This also includes mixtures of medical waste and hazardous waste. It does not apply to what would otherwise be household waste.

C8.2. Definitions

C8.2.1. Infectious Agent. Any organism (such as a virus or a bacterium) that is capable of being communicated by invasion and multiplication in body tissues and capable of causing disease or adverse health impacts in humans.

C8.2.2. Infectious Hazardous Waste. Mixtures of infectious medical waste and hazardous waste to include solid waste such as fluids from a parasitology laboratory.

C8.2.3. Infectious Medical Waste. Solid waste produced by medical and dental treatment facilities which is specially managed because it has the potential for causing disease in man and may pose a risk to both individuals or community health if not managed properly, and which includes the following classes:

C8.2.3.1. Microbiology waste, including cultures and stocks of etiologic agents which, due to their species, type, virulence, or concentration are known to cause disease in humans.

C8.2.3.2. Pathology waste, including human tissues and organs, amputated limbs or other body parts, fetuses, placentas, and similar tissues from surgery, delivery or autopsy procedures. Animal carcasses, body parts, blood, and bedding are also included.

C8.2.3.3. Human blood and blood products (including serum, plasma, and other blood components), items contaminated with liquid or semi-liquid blood or blood products and items saturated or dripping with blood or blood products, and items caked with blood or blood products, that are capable of releasing these materials during handling.

C8.2.3.4. Potentially infectious materials including human body fluids such as semen, vaginal secretions, cerebrospinal fluid, pericardial fluid, pleural fluid, peritoneal fluid, amniotic fluid, saliva in dental procedures, any body fluid that is visibly contaminated with blood, and all body fluids in situations where it is difficult or impossible to differentiate between body fluids.

C8.2.3.5. Sharps, including hypodermic needles, syringes, biopsy needles and other types of needles used to obtain tissue or fluid specimens, needles used to deliver intravenous solutions, scalpel blades, pasteur pipettes, specimen slides, cover slips, glass petri plates, and broken glass potentially contaminated with infectious waste.

C8.2.3.6. Infectious waste from isolation rooms, but only including those items which were contaminated or likely to be contaminated with infectious agents or pathogens to include excretion exudates and discarded materials contaminated with blood.

C8.2.4. Noninfectious Medical Waste. Solid waste created that does not require special management because it has been determined to be incapable of causing disease in man or which has been treated to render it noninfectious.

C8.2.5. Solid Waste. Any solid waste as defined in Chapter 7, "Solid Waste Management."

C8.2.6. Treatment. Any method, technique or process designed to change the physical, chemical, or biological character or composition of any infectious hazardous or infectious waste so as to render such waste non-hazardous, or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume. Treatment methods for infectious waste must eliminate infectious agents so that they no longer pose a hazard to persons who may be exposed.

C8.3. Criteria

C8.3.1. Infectious medical waste will be separated, if practical, from other solid waste at the point of origin.

C8.3.2. Mixtures of infectious medical wastes and hazardous wastes will be handled as infectious hazardous waste under DoD 4160.21-M and are the responsibility of the generating DoD Component. Priority will be given to the hazard that presents the greatest risk. Defense Reutilization and Marketing Offices (DRMOs) have no responsibility for this type of property until it is rendered noninfectious as determined by the appropriate DoD medical authority.

C8.3.3. Solid waste that is classified as a hazardous waste in accordance with Chapter 20 (Appendix 1) will be managed in accordance with the criteria in Chapter 6.

C8.3.4. Mixtures of other solid waste and infectious medical waste will be handled as infectious medical waste.

C8.3.5. Radioactive medical waste will be managed in accordance with Service Directives.

C8.3.6. Infectious medical waste will be segregated, transported and stored in bags or receptacles a minimum of 3 mils thick having such durability, puncture resistance and burst strength as to prevent rupture or leaks during ordinary use.

C8.3.7. All bags or receptacles used to segregate, transport or store infectious medical waste will be clearly marked with the universal biohazard symbol and the word "BIOHAZARD" and will include marking that identifies the generator, date of generation and the contents.

C8.3.8. Sharps will only be discarded into rigid receptacles. Needles shall not be clipped, cut, bent, or recapped before disposal.

C8.3.9. Infectious medical waste will be transported and stored to minimize human exposure, and will not be placed in chutes or dumbwaiters.

C8.3.10. Infectious medical waste will not be compacted unless converted to noninfectious medical waste by treatment as described in subsection C8.3.17. Containers holding sharps will not be compacted.

C8.3.11. All anatomical pathology waste (i.e., large body parts) must be placed in containers lined with plastic bags that comply with subsection C8.3.6, and may only be disposed of by burial after being treated for disposal by incineration or cremation.

C8.3.12. Blood, blood products and other liquid infectious wastes will be handled as follows:

C8.3.12.1. Bulk blood or blood products may only be decanted into clinical sinks and the emptied containers will continue to be managed as infectious medical waste.

C8.3.12.2. Suction canister waste from operating rooms will either be decanted into a clinical sink or will be sealed into leak-proof containers and incinerated.

C8.3.13. All personnel handling infectious medical waste will wear appropriate protective apparel or equipment such as gloves, coveralls, mask, and goggles sufficient to prevent the risk of exposure to infectious agents or pathogens.

C8.3.14. If infectious medical waste cannot be treated on-site, it will be managed during storage as follows:

C8.3.14.1. Infectious medical waste will be maintained in a nonputrescent state, using refrigeration as necessary.

C8.3.14.2. Infectious medical waste with multiple hazards (i.e., infectious hazardous waste, or infectious radioactive waste) will be segregated from the general infectious waste stream when additional or alternative treatment is required.

C8.3.15. Storage sites must be:

C8.3.15.1. Specifically designated;

C8.3.15.2. Constructed to prevent entry of insects, rodents and other pests;

C8.3.15.3. Prevent access by unauthorized personnel; and

C8.3.15.4. Marked on the outside with the universal biohazard symbol and the word "BIOHAZARD" in both English and the language of the host nation.

C8.3.16. Bags and receptacles containing infectious medical waste must be placed into rigid or semi-rigid, leak-proof containers before being transported off-site.

C8.3.17. Infectious medical waste must be treated in accordance with Table C8.T1 and the following before disposal:

C8.3.17.1. Sterilizers must maintain the temperature at 121°C (250°F) for at least 30 minutes at 15 psi.

C8.3.17.2. The effectiveness of sterilizers must be checked at least weekly using *Bacillus stearo thermophilus* spore strips or an equivalent biological performance test.

C8.3.17.3. Incinerators used to treat medical waste must be designed and operated to maintain a minimum temperature and retention time sufficient to destroy all infectious agents and pathogens, and must meet applicable criteria in Chapter 2 for air emissions.

C8.3.17.4. Ash or residue from the incineration of infectious medical waste must be assessed for classification as hazardous waste in accordance with the criteria in Chapter 6. Ash that is determined to

be hazardous waste must be managed in accordance with Chapter 6. All other residue will be disposed of in a landfill that complies with the criteria of Chapter 7.

C8.3.17.5. Chemical disinfection must be conducted using procedures and compounds approved by appropriate DoD medical authority for use on any pathogen or infectious agent suspected to be present in the waste.

C8.3.18. Installations will develop contingency plans for treatment or disposal of infectious medical waste should the primary means become inoperable.

C8.3.19. Spills of infectious medical waste will be cleaned up as soon as possible in accordance with the following:

C8.3.19.1. Response personnel must comply with subsection C8.3.13.

C8.3.19.2. Blood, body fluid and other infectious fluid spills must be removed with an absorbent material that must then be managed as infectious medical waste.

C8.3.19.3. Surfaces contacted by infectious medical waste must be washed with soap and water and chemically decontaminated in accordance with paragraph C8.3.17.5.

C8.3.20. Installations will keep records, for at least three years after the date of disposal, of the following information concerning infectious medical waste:

C8.3.20.1. Type of waste;

C8.3.20.2. Amount of waste (volume or weight);

C8.3.20.3. Treatment, if any, including date of treatment; and

C8.3.20.4. Disposition, including date of disposition, and if the waste is transferred to host nation facilities, receipts acknowledging paragraphs C8.3.20.1 - C8.3.20.3 for each transfer.

Table C8.T1. Treatment and Disposal Methods for Infectious Medical Waste

Type of Medical Waste	Method of Treatment	Method of Disposal
Microbiological	¹ Steam sterilization	² Municipal solid waste landfill (MSWLF)
	Chemical disinfection	MSWLF
	Incineration	MSWLF
Pathological	³ Incineration	MSWLF
	³ Cremation	Burial
	⁴ Chemical Sterilization	⁵ Domestic wastewater treatment plant (DWTP)
	⁴ Steam sterilization	DWTP
Bulk blood and suction canister waste	⁶ Steam sterilization	DWTP
	⁶ Incineration	MSWLF
Sharps in sharps containers	Steam sterilization	MSWLF
	Incineration	MSWLF

Notes

1. Preferred method for cultures and stocks because they can be treated at point of generation
2. See Chapter 7 for criteria for solid waste landfills.
3. Anatomical pathology waste (i.e., large body parts) must be treated either by incineration or cremation prior to disposal.
4. This only applies to placentas, small organs, and small body parts, which may be steam, sterilized or chemically sterilized, ground, and discharged to a domestic wastewater treatment plant.
5. See Chapter 4 for criteria for domestic wastewater treatment plants.
6. Bulk blood or suction canister waste known to be infectious must be treated by incineration or steam sterilization before disposal.

C9. CHAPTER 9PETROLEUM, OIL AND LUBRICANTSC9.1. Scope

This Chapter contains criteria to control and abate pollution resulting from the storage, transport, and distribution of petroleum products. Criteria for Underground Storage Tanks (USTs) containing POL products are addressed in Chapter 19.

C9.2. Definitions

C9.2.1. Bulk Storage Tanks. Refers to field- constructed tanks, usually having a capacity greater than 190,000 liters (50,000 gallons), and constructed above or below ground.

C9.2.2. Pipeline Facility. Includes new and existing pipes, pipeline rights of way, auxiliary equipment (e.g., valves, manifolds, etc.), and buildings or other facilities used in the transportation of POL.

C9.2.3. POL. Refined petroleum, oils and lubricants.

C9.2.4. POL Facility. An installation with any individual above ground tank of 2,500 liters (660 gallons) or greater; aggregate above-ground storage of 5,000 liters (1,320 gallons) or greater; UST storage of greater than 159,000 liters (42,000 gallons); or a pipeline facility as identified in paragraph C9.2.6.

C9.2.5. Storage Tank. A fixed container designed to store POL.

C9.2.6. Underground Storage Tank (UST). Any tank including underground piping connected thereto, larger than 416 liters (110 gallons), that is used to contain POL products or hazardous materials and the volume of which, including the volume of connected pipes, is 10 percent or more beneath the surface of the ground, but does not include:

C9.2.6.1. Tanks containing heating oil used for consumption on the premises where it is stored;

C9.2.6.2. Septic tanks;

C9.2.6.3. Storm water or wastewater collection systems;

C9.2.6.4. Flow through process tanks;

C9.2.6.5. Surface impoundments, pits, ponds or lagoons;

C9.2.6.6. Field constructed tanks; or

C9.2.6.7. Hydrant fueling systems.

C9.2.6.8. UST containing "*de minimus*" concentrations of regulated substances.

C9.2.6.9. Emergency spill or overflow containment UST systems that are expeditiously emptied after use.

C9.2.6.10. Storage tanks located in an accessible underground area (such as a basement or vault) if the storage tank is situated upon or above the surface of the floor.

C9.3. Criteria

C9.3.1. Spill Plans. Each installation will have a contingency plan to manage spills and releases at all POL facilities. Criteria for these plans are found in Chapter 18 of these Standards. These plans must be written specifically for each POL facility, certified by a competent technical authority, and updated at least every 5 years, or when there are significant changes to operations.

C9.3.2. General Tank Provisions. All POL above-ground bulk storage tanks must meet the following requirements:

C9.3.2.1. All aboveground bulk POL storage tanks must be provided with a secondary means of containment (dike and basin) capable of holding the entire contents of the largest single tank plus sufficient freeboard to allow for precipitation and expansion of product.

C9.3.2.2. Maximum permeability for containment areas will be 10^{-7} cm/sec.

C9.3.2.3. Drainage of storm waters from containment areas will be controlled by a valve that is locked closed when not in active use.

C9.3.2.4. Before draining storm waters from containment areas they will be inspected for petroleum sheen. If a petroleum sheen is present it must be collected with adsorbent material prior to drainage, or treated using an oil-water separator. Disposal of adsorbent material exhibiting the hazardous characteristics in Chapter 20 (Appendix 1) will be in accordance with Chapter 6 of these Standards.

C9.3.3. Additional Tank Wastes Provisions. POL tank cleaning wastes frequently have hazardous characteristics (as defined in subsection C20.1.) and must be handled and disposed of according to the requirements of Chapter 6 of these Standards. These wastes and handling procedures include:

C9.3.3.1. Tank cleaning wastes (sludge and washwaters) will be disposed of in accordance with the criteria of Chapter 6 of these Standards, unless testing confirms they do not have hazardous characteristics as defined in subsection C20.1.

C9.3.3.2. Tank bottom waters, which are periodically drained from bulk storage tanks, will be collected and disposed of in accordance with Chapter 6 of these Standards, unless testing confirms they do not have hazardous characteristics.

C9.3.4. General POL Pipeline Provisions for Testing and Maintenance. All pipeline facilities carrying POL must be tested and maintained in accordance with recognized U.S. industry standards. This includes these requirements:

C9.3.4.1. Each pipeline operator handling POL will prepare and follow a procedural manual for operations, maintenance, and emergencies.

C9.3.4.2. Each new pipeline facility and each facility in which pipe has been replaced or relocated must be tested in accordance with recognized U.S. industry standards, without leakage before being placed in-service.

C9.3.5. General POL Pipeline Construction. All pipeline facilities with a construction start date after 1 October 1994 will be designed and constructed to meet recognized U.S. industry standards.

C9.3.6. POL Spills and Leaks. To control accidental POL releases, the installation must follow the guidance in the spill plan required under subsection C18.3.3 in Chapter 18.

C10. CHAPTER 10

NOISE – RESERVED

C11. CHAPTER 11PESTICIDESC11.1. Scope

This Chapter contains criteria regulating the use, storage, and handling of pesticides, herbicides, and defoliants, but does not address the use of these materials by individuals acting in an unofficial capacity in a residence or garden. For the purposes of these Standards, pesticides generically refers to pesticides, herbicides and defoliants. The disposal of pesticides is covered in Chapters 6 and 7.

C11.2. Definitions

C11.2.1. Certified Pesticide Applicators. Personnel who apply pesticides or supervise the use of pesticides, and who have been formally certified in accordance with the Department of Defense Manual, DoD Pest Management Training and Certification (DoD 4150.7-M) (which accepts host nation certification in appropriate circumstances).

C11.2.2. Integrated Pest Management (IPM). A planned program, incorporating continuous monitoring, education, record-keeping, and communication to prevent pests and disease vectors from causing unacceptable damage to operations, people, property, materiel, or the environment. IPM uses targeted, sustainable (effective, economical, environmentally sound) methods including education, habitat modification, biological control, genetic control, cultural control, mechanical control, physical control, regulatory control, and where necessary, the judicious use of least-hazardous pesticides.

C11.2.3. Pests. Arthropods, birds, rodents, nematodes, fungi, bacteria, viruses, algae, snails, marine borers, snakes, weeds, undesirable vegetation, and other organisms (except for microorganisms that cause human or animal disease) that adversely affect the well being of humans or animals, attack real property, supplies, equipment or vegetation, or are otherwise undesirable.

C11.2.4. Pest Management Consultant. Professional DoD pest management personnel located at component headquarters, field operating agencies, major commands, facilities engineering field divisions or activities, or area support activities who provide technical and management guidance for the conduct of installation pest management operations. Some pest management consultants may be designated by their component as certifying officials.

C11.2.5. Pesticide. Any substance or mixture of substances, including biological control agents, that may prevent, destroy, repel, or mitigate pests.

C11.2.6. Pesticide Waste. Materials subject to pesticide disposal restrictions including:

C11.2.6.1. Any pesticide that has been identified by the pest management consultant as cancelled under U.S. or host nation authority;

C11.2.6.2. Any pesticide that does not meet specifications, is contaminated, has been improperly mixed, or otherwise unusable, whether concentrated or diluted;

C11.2.6.3. Any material used to clean up a pesticide spill; or

C11.2.6.4. Any containers, equipment, or material contaminated with pesticides. Empty pesticide containers that have been triple rinsed are not considered hazardous waste, and can be disposed of as normal solid waste.

C11.2.7. Registered Pesticide. A pesticide that has been registered and approved for sale or use within the United States or the host nation.

C11.3. Criteria

C11.3.1.1. All pesticide applications, excluding arthropod skin and clothing repellents, will be recorded using DD Form 1532-1, "Pest Management Maintenance Report," or a computer-generated equivalent. These records will be archived for permanent retention in accordance with specific service procedures. The Pest Management Maintenance Report has been assigned Report Control Symbol DD-A&T(A&AR)1080 in accordance with DoD 8910-M.

C11.3.1.2. Installations will implement and maintain a current pest management plan that includes measures for all installation activities and satellite sites that perform pest control. This written plan will include IPM procedures for preventing pest problems in order to minimize the use of pesticides. The plan must be reviewed and approved in writing by the appropriate pest management consultant.

C11.3.1.3. All pesticide applications will be made by certified pesticide applicators, with the following exceptions:

C11.3.1.3.1. New DoD employees who are not certified may apply pesticides during an apprenticeship period not to exceed 2 years and only under the supervision of a certified pesticide applicator;

C11.3.1.3.2. Arthropod skin and clothing repellents; and

C11.3.1.3.3. Pesticides applied as part of an installation's self help program.

C11.3.1.4. All pesticide applicators will be included in a medical surveillance program to monitor the health and safety of persons occupationally exposed to pesticides.

C11.3.1.5. All pesticide applicators will be provided with personal protective equipment appropriate for the work they perform and the types of pesticides to which they may be exposed.

C11.3.1.6. Installations will only use registered pesticides approved in writing by the appropriate pest management consultant. This may be documented as part of the approval of the pest management plan:

C11.3.1.7. Pesticides will be included in the installation spill contingency plan (See Chapter 18).

C11.3.1.8. Pest management facilities, including mixing and storage areas, will comply with Military Handbook 1028/8A.

C11.3.1.9. Labels will bear the appropriate use instructions and precautionary message based on the toxicity category of the pesticide ("danger," "warning" or "caution"). If foreign nationals will be using the pesticides, the precautionary messages and use instructions will be in English and in the prevalent local languages.

C11.3.1.10. Material Safety Data Sheets (MSDSs) and labels for all pesticides will be available at the storage and holding facility.

C11.3.1.11. Pesticide storage areas will contain a readily-visible current inventory of all items in storage, including items awaiting disposal, and should be regularly inspected and secured to prevent unauthorized access.

C11.3.1.12. Unless otherwise restricted or canceled, pesticides in excess of installation needs will be redistributed within the supply system or disposed of in accordance with procedures outlined below.

C11.3.1.13. The generator of pesticide wastes will determine if waste is considered hazardous or not in accordance with Chapter 6 of these Standards.

C11.3.1.13.1. Pesticide waste determined to be hazardous waste will be disposed of in accordance with the criteria for hazardous waste disposal in Chapter 6.

C11.3.1.13.2. Pesticide waste that is determined not to be a hazardous waste will be disposed of in accordance with the label instructions, through DRMO, as a solid waste. Pesticide containers shall be crushed or the top and bottom portions shall be removed to prevent reuse.

C12. CHAPTER 12HISTORIC AND CULTURAL RESOURCESC12.1. Scope

This Chapter contains criteria for required plans and programs needed to ensure proper protection and management of cultural resources, such as properties on the World Heritage List or on the host country's list equivalent to the U.S. National Register of Historic Places.

C12.2. Definitions

C12.2.1. Adverse Effect. Changes that diminish the quality or significant value of historic or cultural resources.

C12.2.2. Archeological Resource. Any material remains of prehistoric or historic human life or activities. Such resources include, but are not limited to: pottery, basketry, bottles, weapons, weapon projectiles, tools, structures or portions of structures, pit houses, rock paintings, rock carvings, intaglios, graves, human skeletal materials, or any portion of any of the foregoing items.

C12.2.3. Cultural Mitigation. Specific steps designed to lessen the adverse effects of a DoD action on a historical or cultural resource, including:

C12.2.3.1. Limiting the magnitude of the action;

C12.2.3.2. Relocating the action in whole or in part;

C12.2.3.3. Repairing, rehabilitating, or restoring the affected resources, effected property; and

C12.2.3.4. Recovering and recording data from cultural properties that may be destroyed or substantially altered.

C12.2.4. Historic and Cultural Resources Program. Identification, evaluation, documentation, curation, acquisition, protection, rehabilitation, restoration, management, stabilization, maintenance, recording, and reconstruction of historic and cultural resources and any combination of the foregoing.

C12.2.5. Historic or Cultural Resource. Physical remains of any prehistoric or historic district, site, building, structure, or object significant in world, national or local history, architecture, archeology, engineering, or culture. The term includes artifacts, archeological resources, records, and material remains that are related to such a district, site, building, structure, or object. The term also includes any property listed on the World Heritage List or the host nation's equivalent of the National Register of Historic Places.

C12.2.6. Inventory. To determine the location of historic and cultural resources that may have world, national or local significance.

C12.2.7. Material Remains. Physical evidence of human habitation, occupation, use, or activity, including the site, loci, or context in which such evidence is situated including:

C12.2.7.1. Surface or subsurface structures;

C12.2.7.2. Surface or subsurface artifact concentrations or scatters;

C12.2.7.3. Whole or fragmentary tools, implements, containers, weapons, clothing, and ornaments;

C12.2.7.4. By-products, waste products, or debris resulting from manufacture or use;

C12.2.7.5. Organic waste;

C12.2.7.6. Human remains;

C12.2.7.7. Rock carvings, rock paintings, and intaglios;

C12.2.7.8. Rock shelters and caves;

C12.2.7.9. All portions of shipwrecks; or

C12.2.7.10. Any portion or piece of any of the foregoing.

C12.2.8. Preservation. The act or process of applying measures to sustain the existing form, integrity, and material of a building or structure, and the existing form and vegetative cover of a site. It may include initial stabilization work where necessary, as well as ongoing maintenance of the historic building materials.

C12.2.9. Protection. The act or process of applying measures designed to affect the physical condition of a property by safeguarding it from deterioration, loss, attack, or alteration, or to cover or shield the property from danger or injury. In the case of buildings and structures, such treatment is generally temporary and anticipates future historic preservation treatment; in the case of archaeological sites, the protective measure may be temporary or permanent.

C12.2.10. Earth Fixed Ancient Monuments. Monuments, buildings or building parts (dating prior to 1900) that are visible in the terrain, such as ruins, habitations, tent circles, kitchen middens, graves, burial grounds, stone pitchings, and cairns. The Greenland National Museum keeps a register of the ancient monuments and preserved buildings, burial grounds, building parts and cairns.

C12.2.11. Cairn. A mound of stones erected as a landmark or memorial.

C12.2.12. Midden. A dunghill or refuse heap, especially one near a dwelling.

C12.3. Criteria

C12.3.1. Installation commanders shall take into account the effect of any action on any property listed on the World Heritage List or on the applicable country's equivalent of the National Register of Historic Places for purposes of avoiding or mitigating any adverse effects.

C12.3.2. Installations shall have access to the World Heritage List and the host nation's equivalent of the National Register of Historic Places.

C12.3.3. Installation commanders shall ensure that personnel performing historic or cultural resource functions have the requisite expertise in world, national and local history and culture. This may be in-house, contract, or through consultation with another agency. Government personnel directing such functions must have training in historic or cultural resource management.

C12.3.4. Installations shall, after coordination with the host nation installation commander or similar appropriate host nation authorities, and if financially and otherwise practical:

C12.3.4.1. Inventory historic and cultural resources in areas under DoD control. An inventory shall be developed from a records search and visual survey. This inventory will include any known earth fixed ancient monuments, as indicated in the register maintained by the Greenland National Museum.

C12.3.4.2. Develop a plan for the protection and preservation of historic and cultural resources identified on the installation inventory and for mitigation of any adverse effects. The plan must include the following prohibitions:

C12.3.4.2.1 No damage, modification, or removal (in whole or in part) of earth fixed ancient monuments is allowed.

C12.3.4.2.2 No building, digging, plowing, starting a fire, putting up a tent or littering in and on an earth fixed ancient monuments is allowed.

C12.3.4.2.3 No activity considerably scarring the ancient monument within a distance of 12 meters is allowed.

C12.3.4.2.4 If an earth fixed ancient monument found during excavation, work affecting the ancient monument must be stopped. Objects found shall be turned over to the GHR upon request. Approval to continue excavation work must be obtained from The National Museum or the regional government member of cultural affairs and education.

C12.3.4.2.5 An exemption from the earth fixed ancient monuments requirements may be obtained from the regional government member of cultural affairs and education after they have obtained a statement from the Greenland National Museum.

C12.3.4.3. Establish measures sufficient to protect known historic or cultural resources until appropriate mitigation or preservation can be completed.

C12.3.4.4. Establish measures sufficient to protect known archeological resources until appropriate mitigation or preservation can be completed.

C12.3.5. Installation commanders shall establish measures to prevent DoD personnel from disturbing or removing historic or cultural resources without permission of the host nation.

C12.3.6. Installation commanders shall ensure that planning for major actions includes consideration of possible effects on historic or cultural resources.

C12.3.7. If potential historic or cultural resources not previously inventoried are discovered in the course of a DoD action, the newly-discovered items will be preserved and protected pending a decision on final disposition by the installation commander. The decision on final disposition will be made by the installation commander after coordination with the host nation installation commander or similar appropriate host nation authorities.

C13. CHAPTER 13NATURAL RESOURCES AND ENDANGERED SPECIESC13.1. Scope

This Chapter establishes criteria for required plans and programs needed to ensure proper protection, enhancement, and management of natural resources and any species (flora or fauna) declared endangered or threatened by either the United States or host nation governments.

C13.2. Definitions

C13.2.1. Adverse Effect. Changes that diminish the quality or significant value of natural resources. For biological resources, adverse effects include significant decreases in overall population diversity, abundance, and fitness.

C13.2.2. Conservation. Planned management, use and protection; continued benefit for present and future generations; and prevention of exploitation, destruction and/or neglect of natural resources.

C13.2.3. Host Nation Protected Species. Any species of flora or fauna listed or designated by the host nation, because the species continued existence is, or is likely to be, threatened and is therefore subject to special protection from destruction or adverse modification of associated habitat.

C13.2.4. Management Plan. A document describing natural resources, their quantity, condition, and actions to ensure their conservation and good stewardship.

C13.2.5. Natural Resource. All living and inanimate materials supplied by nature that are of aesthetic, ecological, educational, historical, recreational, scientific, or other value.

C13.2.6. Natural Resources Management. Action taken to protect, manipulate, alter, or maintain natural resources in harmony to meet present and future human needs.

C13.2.7. Significant Land or Water Areas. Land or water area that is normally 500 or more acres outside the cantonment area; areas of smaller size are included if they have natural resources that are especially vulnerable to disturbance.

C13.2.8. Threatened and Endangered Species. Any species of fauna or flora, listed in Tables C13.T1 and C13.T2, respectively.

C13.3. Criteria

C13.3.1. Installations that have land and water areas shall take reasonable steps to protect and enhance known endangered or threatened species and host nation protected species and their habitat.

C13.3.2. Installations shall maintain, or have access to, Table C13.T1, Table C13.T2, and a current list of host nation protected species.

C13.3.3. Installations with significant land or water areas shall, after coordination with the host nation installation commander or similar appropriate host nation authorities, develop natural resources management plans.

C13.3.4. Installations having natural resources management plans shall, after coordination with the host nation installation commander or similar appropriate host nation authorities, and if financially and otherwise practical, and in such a way that there is no net loss of mission capability:

C13.3.4.1. Initiate surveys for endangered or threatened species and host nation protected species identification, or support host nation-initiated surveys.

C13.3.4.2. Implement natural resources management plans.

C13.3.5. The host nation installation commander, or if there is no host nation installation commander, the U.S. Ambassador, will be notified of the discovery of any endangered or threatened species and host nation protected species not previously known to be present on the installation.

C13.3.6. Installations shall maintain grounds to meet designated mission use and ensure harmony with the natural landscape and/or the adjacent host nation facilities where practical.

C13.3.7. Installations shall ensure that personnel performing natural resource functions have the requisite expertise in the management of their discipline (i.e., endangered or threatened species, host nation protected species, wetlands, soil stabilization). This may be in-house, contract, or through consultation with another agency. Government personnel directing such functions must have training in natural resources management.

C13.3.8. Installations shall place emphasis on the maintenance and protection of habitats favorable to the reproduction and survival of indigenous plants, fish, and wildlife.

C13.3.9. Land and vegetative management activities will be consistent with current conservation and land use principles (e.g. ecosystem protection, biodiversity conservation, and mission-integrated land use).

C13.3.10. Installations shall utilize protective vegetative cover or other standard soil erosion/sediment control practices to control dust, stabilize sites, and avoid silting of streams.

Table C13.T1. Threatened and Endangered (T&E) Animals

Common Name	Scientific Name	OCONUS T&E Listed
Mammals		
Bandicoot, barred	<i>Perameles bougainville</i>	Australia
Bandicoot, desert	<i>Perameles eremiana</i>	Australia
Bandicoot, lesser rabbit	<i>Macrotis leucura</i>	Australia
Bandicoot, pig-footed	<i>Chaeropus ecaudatus</i>	Australia
Bandicoot, rabbit	<i>Macrotis lagotis</i>	Australia
Banteng	<i>Bos javanicus</i> (=banteng)	Southeast Asia
Bat, Bulmer's fruit (flying fox)	<i>Aproteles bulmerae</i>	Papua New Guinea
Bat, bumblebee	<i>Craseonycteris thonglongyai</i>	Thailand
Bat, lesser (=Sanborn's) long-nosed	<i>Leptonycteris curasoae</i> (=sanborni) <i>yerbabuenae</i>	Central America
Bat, Mexican long-nosed	<i>Leptonycteris nivalis</i>	Central America
Bear, brown	<i>Ursus arctos arctos</i>	Italy

Table C13.T1. Threatened and Endangered (T&E) Animals (continued)

Common Name	Scientific Name	OCONUS T&E Listed
Cat, Iriomote	<i>Felis (Mayailurus) iriomotensis</i>	Japan (Iriomote Island, Ryukyu Islands)
Cat, leopard	<i>Felis bengalensis bengalensis</i>	Southeast Asia
Cat, marbled	<i>Felis marmorata</i>	Southeast Asia
Cat, Temminck's (=golden cat)	<i>Felis temmincki</i>	Southeast Asia
Chamois, Apennine	<i>Rupicapra rupicapra ornata</i>	Italy
Cheetah	<i>Acinonyx jubatus</i>	Africa to India
Chimpanzee	<i>Pan troglodytes</i>	Wherever found in the wild or in captivity
Deer, Eld's brow-antlered	<i>Cervus eldi</i>	Southeast Asia
Deer, Formosan sika	<i>Cervus nippon taiouanus</i>	Taiwan
Deer, hog	<i>Axis (=Cervus) porcinus annamiticus</i>	Thailand
Deer, musk	<i>Moschus spp.</i>	India
Deer, Ryukyu sika	<i>Cervus nippon keramae</i>	Japan (Ryukyu Islands)
Dhole (=Asiatic wild dog)	<i>Cuon alpinus</i>	Korea, Southeast Asia
Dibbler	<i>Antechinus apicalis</i>	Australia
Dugong	<i>Dugong dugon</i>	East Africa to southern Japan
Elephant, African	<i>Loxodonta africana</i>	Africa
Elephant, Asian	<i>Elephas maximus</i>	South-central and southeastern Asia
Gazelle, Arabian	<i>Gazella gazella</i>	Arabian Peninsula, Sinai
Gazelle, sand	<i>Gazella subgutturosa marica</i>	Arabian Peninsula
Gazelle, Saudi Arabian	<i>Gazella dorcas saudiya</i>	Arabian Peninsula
Gazelle, slender-horned (=Rhim)	<i>Gazella leptoceros</i>	Egypt
Gibbons	<i>Hylobates spp. (including Nomascus)</i>	Southeast Asia
Goral	<i>Nemorhaedus goral</i>	East Asia
Hutia, Cabrera's	<i>Capromys angelcabrerai</i>	Cuba
Hutia, dwarf	<i>Capromys nana</i>	Cuba
Hutia, large-eared	<i>Capromys auritus</i>	Cuba
Hutia, little earth	<i>Capromys sanfelipensis</i>	Cuba
Ibex, Pyrenean	<i>Capra pyrenaica pyrenaica</i>	Spain
Jaguarundi	<i>Felis yagouaroundi panamensis</i>	Panama
Kangaroo, Tasmanian forester	<i>Macropus giganteus tasmaniensis</i>	Australia (Tasmania)
Kouprey	<i>Bos sauveli</i>	Thailand
Leopard, clouded	<i>Neofelis nebulosa</i>	Southeastern Asia, Taiwan
Leopard	<i>Panthera pardus</i>	Africa, Asia
Lion, Asiatic	<i>Panthera leo persica</i>	Turkey
Lynx, Spanish	<i>Felis (=Lynx) pardina</i>	Spain
Macaque, Formosan rock	<i>Macaca cyclopis</i>	Taiwan

Table C13.T1. Threatened and Endangered (T&E) Animals (continued)

Common Name	Scientific Name	OCONUS T&E Listed
Macaque, Japanese	<i>Macaca fuscata</i>	Japan (Shikoku, Kyushu and Honshu Islands)
Manatee, West Indian (=Florida)	<i>Trichechus manatus</i>	Caribbean Sea, South America
Margay	<i>Felis wiedii</i>	Central Mexico southward and South America
Marsupial, eastern jerboa	<i>Antechinomys laniger</i>	Australia
Marsupial-mouse, large desert	<i>Sminthopsis psammophila</i>	Australia
Marsupial-mouse, long-tailed	<i>Sminthopsis longicaudata</i>	Australia
Marten, Formosan yellow-throated	<i>Martes flavigula chrysospila</i>	Taiwan
Monkey, howler	<i>Alouatta palliata</i> (=villosa)	Mexico to South America
Monkey, red-backed squirrel	<i>Saimiri oerstedii</i>	Panama
Monkey, spider	<i>Ateles geoffroyi panamensis</i>	Panama
Mouse, Australian native	<i>Notomys aquilo</i>	Australia
Mouse, Australian native	<i>Zyzomys</i> (=Notomys) <i>pedunculatus</i>	Australia
Mouse, Field's	<i>Pseudomys fieldi</i>	Australia
Mouse, Gould's	<i>Pseudomys gouldii</i>	Australia
Mouse, New Holland	<i>Pseudomys novaehollandiae</i>	Australia
Mouse, Shark Bay	<i>Pseudomys praeconis</i>	Australia
Mouse, Shortridge's	<i>Pseudomys shortridgei</i>	Australia
Mouse, Smoky	<i>Pseudomys fumeus</i>	Australia
Mouse, western	<i>Pseudomys occidentalis</i>	Australia
Native-cat, eastern	<i>Dasyurus viverrinus</i>	Australia
Numbat	<i>Myrmecobius fasciatus</i>	Australia
Ocelot	<i>Felis pardalis</i>	Central and South America
Oryx, Arabian	<i>Oryx leucoryx</i>	Arabian Peninsula
Otter, giant	<i>Pteronura brasiliensis</i>	South America
Otter, long-tailed	<i>Lutra longicaudis</i> (incl. <i>platensis</i>)	South America
Pangolin (=scaly anteater)	<i>Manis temmincki</i>	Africa
Planigale, little	<i>Planigale ingrami subtilissima</i>	Australia
Planigale, southern	<i>Planigale tenuirostris</i>	Australia
Possum, mountain pygmy	<i>Burramys parvus</i>	Australia
Possum, scaly-tailed	<i>Wyulda squamicaudata</i>	Australia
Puma, Costa Rican	<i>Felis concolor costaricensis</i>	Panama
Quokka	<i>Setonix brachyurus</i>	Australia
Rabbit, Ryukyu	<i>Pentalagus furnessi</i>	Japan (Ryukyu Islands)
Rat, false water	<i>Xeromys myoides</i>	Australia
Rat, stick-nest	<i>Leporillus conditor</i>	Australia
Rat-kangaroo, brush-tailed	<i>Bettongia penicillata</i>	Australia
Rat-kangaroo, Gaimard's	<i>Bettongia gaimardi</i>	Australia
Rat-kangaroo, Lesueur's	<i>Bettongia lesueur</i>	Australia
Rat-kangaroo, plain	<i>Caloprymnus campestris</i>	Australia
Rat-kangaroo, Queensland	<i>Bettongia tropica</i>	Australia

Table C13.T1. Threatened and Endangered (T&E) Animals (continued)		
Common Name	Scientific Name	OCONUS T&E Listed
Rhinoceros, Javan	<i>Rhinoceros sondaicus</i>	Thailand
Sea-lion, Steller (=northern)	<i>Eumetopias jubatus</i>	Canada
Seledang (=Gaur)	<i>Bos gaurus</i>	Bangladesh, Southeast Asia, India
Solenodon, Cuban	<i>Solenodon (Atopogale) cubanus</i>	Cuba
Tapir, Asian	<i>Tapirus indicus</i>	Thailand
Tiger	<i>Panthera tigris</i>	Temperate and tropical Asia
Tiger, Tasmanian (=Thylacine)	<i>Thylacinus cynocephalus</i>	Australia
Urial	<i>Ovis musimon (=orientalis) ophion</i>	Cyprus
Vicuna	<i>Vicugna vicugna</i>	South America (Andes)
Wallaby, banded hare	<i>Lagostrophus fasciatus</i>	Australia
Wallaby, brindled nail-tailed	<i>Onychogalea fraenata</i>	Australia
Wallaby, crescent nail-tailed	<i>Onychogalea lunata</i>	Australia
Wallaby, Parma	<i>Macropus parma</i>	Australia
Wallaby, western hare	<i>Lagorchestes hirsutus</i>	Australia
Wallaby, yellow-footed rock	<i>Petrogale xanthopus</i>	Australia
Wombat, hairy-nosed (=Barnard's and Queensland hairy-nosed)	<i>Lasiorhinus krefftii</i> (formerly <i>L. barnardi</i> and <i>L. gillespiei</i>)	Australia
Birds		
Albatross, short-tailed	<i>Diomedea albatrus</i>	North Pacific Ocean-- Japan
Bristlebird, western rufous	<i>Dasyornis broadbenti littoralis</i>	Australia
Bristlebird, western	<i>Dasyornis brachypterus longirostris</i>	Australia
Bullfinch, Sao Miguel (finch)	<i>Pyrrhula pyrrhula mourn</i>	Eastern Atlantic Ocean-- Azores
Caracas, Audubon's crested	<i>Pylorus planks Audubon</i>	Panama, Cuba
Crane, Cuba sandal	<i>Gurus condensens nesiotis</i>	West Indies--Cuba
Crane, hooded	<i>Grus monacha</i>	Japan
Crane, Japanese	<i>Grus japonensis</i>	Japan, Korea
Curlew, Eskimo	<i>Numenius borealis</i>	Northern Canada to Argentina
Duck, white-winged wood	<i>Cairina scutulata</i>	Thailand
Eagle, Greenland white-tailed	<i>Haliaeetus albicilla groenlandicus</i>	Greenland and adjacent Atlantic islands
Eagle, Spanish imperial	<i>Aquila heliaca adalberti</i>	Spain
Egret, Chinese	<i>Egretta eulophotes</i>	Korea
Falcon, American peregrine	<i>Falco peregrinus anatum</i>	Canada to South America
Falcon, Eurasian peregrine	<i>Falco peregrinus peregrinus</i>	Europe, Eurasia south to Africa and Mideast
Goose, Aleutian Canada	<i>Branta canadensis leucopareia</i>	Japan
Grasswren, Eyrean (flycatcher)	<i>Amytornis goyderi</i>	Australia
Greenshank, Nordmann's	<i>Tringa guttifer</i>	Japan
Honeyeater, helmeted	<i>Meliphaga cassidix</i>	Australia
Hornbill, helmeted	<i>Rhinoplax vigil</i>	Thailand
Ibis, Japanese crested	<i>Nipponia nippon</i>	Japan, Korea

Table C13.T1. Threatened and Endangered (T&E) Animals (continued)		
Common Name	Scientific Name	OCONUS T&E Listed
Ibis, northern bald	<i>Geronticus eremita</i>	Southern Europe
Kite, Cuba hook-billed	<i>Chondrohierax uncinatus wilsonii</i>	West Indies--Cuba
Ostrich, Arabian	<i>Struthio camelus syriacus</i>	Saudi Arabia
Parakeet, golden-shouldered (=hooded)	<i>Psephotus chrysopterygius</i>	Australia
Parakeet, Norfolk Island	<i>Cyanoramphus novaezelandiae cookii</i>	Australia (Norfolk Island)
Parakeet, orange-bellied	<i>Neophema chrysogaster</i>	Australia
Parakeet, paradise (=beautiful)	<i>Psephotus pulcherrimus</i>	Australia
Parakeet, scarlet-chested (=splendid)	<i>Neophema splendida</i>	Australia
Parakeet, turquoise	<i>Neophema pulchella</i>	Australia
Parrot, Australian	<i>Geopsittacus occidentalis</i>	Australia
Parrot, Bahaman or Cuban	<i>Amazona leucocephala</i>	West Indies--Cuba
Parrot, ground	<i>Pezoporus wallicus</i>	Australia
Pelican, brown	<i>Pelecanus occidentalis</i>	Central and South America
Pheasant, Mikado	<i>Syrnaticus mikado</i>	Taiwan
Pheasant, Swinhoe's	<i>Lophura swinhoii</i>	Taiwan
Pigeon, Azores wood	<i>Columba palumbus azorica</i>	East Atlantic Ocean Azores
Plover, piping	<i>Charadrius melodus</i>	Canada
Quetzal, resplendent	<i>Pharomachrus mocinno</i>	Mexico to Panama
Rail, Lord Howe wood	<i>Tricholimnas sylvestris</i>	Australia (Lord Howe Entire Island)
Robin, scarlet-breasted (flycatcher)	<i>Petroica multicolor multicolor</i>	Australia (Norfolk Island)
Scrub-bird, noisy	<i>Atrichornis clamosus</i>	Australia
Siskin, red	<i>Carduelis (=Spinus) cucullata</i>	South America
Stork, oriental white	<i>Ciconia ciconia boyciana</i>	Japan, Korea
Tern, roseate	<i>Sterna dougallii dougallii</i>	Western Hemisphere
Wanderer, plain (collared-hemipode)	<i>Pedionomus torquatus</i>	Australia
Warbler (wood), Bachman's	<i>Vermivora bachmanii</i>	Cuba
Warbler (wood), golden-cheeked	<i>Dendroica chrysoparia</i>	Honduras
Warbler (wood), Kirtland's	<i>Dendroica kirtlandii</i>	Canada
Whipbird, western	<i>Psophodes nigrogularis</i>	Australia
Woodpecker, ivory-billed	<i>Campephilus principalis</i>	Cuba
Woodpecker, Tristam's	<i>Dryocopus javensis richardsi</i>	Korea
Reptiles		
Crocodile, American	<i>Crocodylus acutus</i>	Central and South America
Crocodile, Cuban	<i>Crocodylus rhombifer</i>	Cuba
Crocodile, Nile	<i>Crocodylus niloticus</i>	Africa
Crocodile, saltwater (=estuarine)	<i>Crocodylus porosus</i>	Southeast Asia, Australia
Crocodile, Siamese	<i>Crocodylus siamensis</i>	Southeast Asia

Table C13.T1. Threatened and Endangered (T&E) Animals (continued)		
Common Name	Scientific Name	OCONUS T&E Listed
Iguana, Cuban ground	<i>Cyclura nubila nubila</i>	Cuba
Lizard, Hierro giant	<i>Gallotia simonyi simonyi</i>	Spain (Canary Islands)
Lizard, Ibiza wall	<i>Podarcis pityusensis</i>	Spain (Balearic Islands)
Monitor, Bengal	<i>Varanus bengalensis</i>	Thailand
Turtle, green sea	<i>Chelonia mydas</i> (incl. <i>agassizi</i>)	Wherever found
Turtle, olive (=Pacific) ridley sea	<i>Lepidochelys olivacea</i>	Wherever found
Turtle, short-necked or western swamp	<i>Pseudemadura umbrina</i>	Australia
Amphibians		
Frog, Panamanian golden	<i>Atelopus varius zeteki</i>	Panama
Salamander, Japanese giant	<i>Andrias davidianus japonicus</i>	Japan
Fishes		
Ala Balik (trout)	<i>Salmo platycephalus</i>	Turkey
Ayumodoki (loach)	<i>Hymenophysa (=Botia) curta</i>	Japan
Bonytongue, Asian	<i>Scleropages formosus</i>	Thailand
Catfish [no common name]	<i>Pangasius sanitwongsei</i>	Thailand
Catfish, giant	<i>Pangasianodon gigas</i>	Thailand
Cicek (minnow)	<i>Acanthorutilus handlirschi</i>	Turkey
Nekogigi (catfish)	<i>Coreobagrus ichikawai</i>	Japan
Tango, Miyako (Tokyo bitterling)	<i>Tanakia tanago</i>	Japan

Table C13.T2. Threatened and Endangered (T&E) Plants

Common Name	Scientific Name	Historic Range
Flowering Plants		
Key tree-cactus	<i>Pilosocereus (=Cereus) robinii</i>	Cuba
Conifers and Cycads		
Pinabete or Guatemalan fir	<i>Abies guatemalensis</i>	Honduras

C14. CHAPTER 14POLYCHLORINATED BIPHENYLSC14.1. Scope

This Chapter contains criteria to control and abate threats to human health and the environment from the handling, use, storage, and disposal of polychlorinated biphenyls (PCBs). These criteria include specific requirements for most uses of PCBs, including, but not limited to, transformers, capacitors, heat transfer systems, hydraulic systems, electromagnets, switches and voltage regulators, circuit breakers, recluses and cables.

C14.2. Definitions

C14.2.1. Capacitor. A device for accumulating and holding a charge of electricity and consisting of conducting surfaces separated by a dielectric.

C14.2.2. Chemical Waste Landfill. A landfill at which a high level of protection against risk of injury to human health or the environment from migration of deposited PCBs to land, water, or the atmosphere is provided by incorporating special methods for locating, engineering, and operating the landfill.

C14.2.3. In or Near Commercial Buildings. Within the interior of, on the roof of, attached to the exterior wall of, in the parking area serving, or within 30 meters of a non-industrial, non-substation building.

C14.2.4. Incinerator. An engineered device using controlled flame combustion to thermally degrade PCBs and PCB items. Examples include rotary kilns, liquid injection incinerators, cement kilns, and high temperature boilers.

C14.2.5. Leak or Leaking. Any instance in which a PCB article, PCB container, or PCB equipment has any PCBs on any portion of its external surface.

C14.2.6. Mark. The descriptive name, instructions, cautions, or other information applied to PCBs and PCB items, or other objects subject to these Standards.

C14.2.7. Marked. PCB items and PCB storage areas and transport vehicles marked by applying a legible mark by painting, fixation of an adhesive label, or by any other method that meets these criteria.

C14.2.8. Non-PCB Transformers. Any transformer that contains less than 50 ppm PCB.

C14.2.9. PCB Article. Any manufactured article, other than a PCB container, that contains PCBs and whose surface(s) has been in direct contact with PCB. This includes capacitors, transformers, electric motors, pumps, and pipes.

C14.2.10. PCB Article Container. Any package, can, bottle, bag, barrel, drum, tank, or other device used to contain PCB articles or PCB equipment, and whose surface(s) has not been in direct contact with PCBs.

C14.2.11. PCB Container. Any package, can, bottle, bag, barrel, drum, tank, or other device that contains PCBs or PCB articles, and whose surface(s) has been in direct contact with PCBs.

C14.2.12. PCB-Contaminated Electrical Equipment. Any electrical equipment including, but not limited to, transformers, capacitors, circuit breakers, reclosers, voltage regulators, switches, electromagnets, and cable, that contain 50 ppm or greater PCB, but less than 500 ppm PCB.

C14.2.13. PCB Equipment. Any manufactured item, other than a PCB container or a PCB article container, which contains a PCB article or other PCB equipment, and includes microwave ovens, electronic equipment, and fluorescent light ballasts and fixtures.

C14.2.14. PCB Item. Any PCB article, PCB article container, PCB container, or PCB equipment that deliberately or unintentionally contains or has as a part of it any PCB, or PCBs at a concentration of 50 ppm or greater.

C14.2.15. PCB Transformer. Any transformer that contains 500 ppm PCB or greater.

C14.2.16. Restricted Access Area. Areas where access by unauthorized personnel is controlled by fences, other man-made structures or naturally-occurring barriers such as mountains, cliffs, or rough terrain.

C14.2.17. Substantial Contact Area. An area that is subject to public access on a routine basis or which could result in substantial dermal contact by employees.

C14.2.18. PCB Large High Voltage Capacitor. A capacitor that contains 1.36 kg (3 lbs.) or more of dielectric fluid and which operates at 2,000 volts (alternating current (ac) or direct current (dc)) or above

C14.2.19. PCB Large Low Voltage Capacitor. A capacitor that contains 1.36 kg (3 lbs.) or more of dielectric fluid and which operates below 2,000 volts (ac or dc).

C14.3. Criteria

C14.3.1. General

C14.3.1.1. The installation spill contingency plan will address PCB items, including, temporary storage items. Chapter 18, "Spill Prevention and Response Planning," provides criteria on how to prepare these plans.

C14.3.1.2. Spills of PCB liquids at concentrations of 50 ppm or greater will be responded to immediately upon discovery and cleaned up in accordance with the following:

C14.3.1.2.1. Surfaces that are located in substantial contact areas will be cleaned to 10 micrograms per 100 square centimeters.

C14.3.1.2.2. Surfaces in all other contact areas will be cleaned to 100 micrograms per 100 square centimeters.

C14.3.1.2.3. Contaminated soil located in restricted access areas will be removed until the soil tests no higher than 25 ppm PCBs and will be backfilled with clean soil containing less than 1 ppm PCBs. Restricted access areas in which PCB spills have been cleaned up shall have annotated on installation real property records the level of PCBs remaining in the soil, including the extent, date and type of sampling and a reference to any reports documenting the site conditions.

C14.3.1.2.4. Contaminated soil located in unrestricted access areas will be removed to a minimum depth of 10 inches or until the soil tests no higher than 10 ppm PCBs, whichever is deeper, and will be backfilled with clean soil containing less than 1 ppm PCBs.

C14.3.1.3. All PCB transformers, PCB large high voltage capacitors, PCB containers, and certain PCB items containing PCBs at concentrations 50 ppm or greater (i.e., electric motors using PCB coolants, hydraulic systems using PCB hydraulic fluid, and heat transfer systems using PCBs), as well as any PCB article containers used to store the preceding items, must be prominently marked in English and the host nation languages. The marking must identify the item as containing PCBs, warn against improper disposal and handling, and provide a phone number in case of spills or if questions arise about disposal. This marking criteria also applies to rooms, vaults, and storage areas containing PCB Transformers or storing PCBs or PCB items for disposal. In addition, the following PCB items must be marked at the time of items' removal from use if not already marked: PCB large low voltage capacitors and equipment containing a PCB Transformer or PCB large high voltage capacitor.

C14.3.1.4. Each installation having PCB items will maintain a written inventory that includes a current list by type of all marked PCB items in use and PCB items (whether or not marked) placed into storage for disposal or disposed of for that year. Inventory records should be maintained for a period of time at least 3 years after the last item on the list is disposed of.

C14.3.1.5. Disposal of PCB items will only be through the servicing DRMO in accordance with DoD 4160.21-M (see subsection C14.3.5 for disposal criteria).

C14.3.1.6. All periodic inspections as required in this Chapter will be documented at the installation. Records of inspections and maintenance history will be maintained for three years after disposal of the transformer.

C14.3.2. PCB transformers (500 ppm PCB or greater).

C14.3.2.1. PCB transformers that are in use or in storage for reuse will not be used in any application that poses a risk of contamination to food or feed.

C14.3.2.2. All PCB transformers, including those in storage for reuse, will be registered with the servicing fire department.

C14.3.2.3. PCB transformers in use in or near commercial buildings or located in sidewalk vaults will be equipped with electrical protection to minimize transformer failure that would result in the release of PCBs.

C14.3.2.4. PCB transformers removed and stored for reuse will only be returned to their original application and location and will not be used at another location unless there is no practical alternative; and any such alternative use will not exceed one year.

C14.3.2.5. PCB transformers will be serviced as follows:

C14.3.2.5.1. Transformers classified as PCB-contaminated electrical equipment will only be serviced with dielectric fluid containing less than 500 ppm PCB;

C14.3.2.5.2. Any servicing of PCB transformers requiring removal of the transformer coil is prohibited;

C14.3.2.5.3. PCBs removed during servicing will be captured and either reused as dielectric fluid or disposed of in accordance with subsection C14.3.5 of this Chapter;

C14.3.2.5.4. PCB transformers may be serviced with dielectric fluid at any PCB concentration. However, the dielectric fluid from a PCB transformer will not be mixed with the dielectric fluid from PCB-contaminated electrical equipment;

C14.3.2.5.5. Regardless of PCB concentration, dielectric fluids containing less than 500 ppm PCB that are mixed with fluids that contain 500 ppm or greater PCB will not be used as dielectric fluid in any electrical equipment. The entire mixture must be considered to be greater than 500 ppm PCB; and

C14.3.2.5.6. Dielectric fluids containing 500 ppm or greater will not be used as dielectric fluid in any transformers classified as PCB-contaminated electrical equipment.

C14.3.2.6. All in-service PCB transformers (greater than 500 ppm) will be inspected at least every 3 months except that PCB transformers with impervious, undrained secondary containment capacity of 100 percent of dielectric fluid or PCB transformers tested and found to contain less than 60,000 ppm PCBs will be inspected at least every 12 months.

C14.3.2.7. If any PCB transformer is involved in a fire such that it was subjected to heat and/or pressure sufficient to result in violent or nonviolent rupture, the installation will take measures to control water runoff, such as blocking floor drains. Runoff water will be tested and treated if required.

C14.3.2.8. Repair or replace leaking PCB transformers within 48 hours or as soon as possible. Leaking PCB transformers not repaired or replaced will be inspected daily. Leaking PCB fluid will be containerized.

C14.3.2.9. All transformers will be considered and treated as PCB transformers unless information to the contrary exists.

C14.3.3. Other PCB Items

C14.3.3.1. Electromagnets, switches, and voltage regulators that may contain PCBs at any concentration are serviced as follows:

C14.3.3.2. PCB-contaminated electrical equipment will only be serviced with dielectric fluid containing less than 500 ppm PCB;

C14.3.3.3. Servicing any electromagnet, switch, or voltage regulator with a PCB concentration of 500 ppm or greater which requires the removal and rework of the internal components is prohibited;

C14.3.3.4. PCBs removed during servicing will be captured and either reused as dielectric fluid or disposed of properly;

C14.3.3.5. PCBs from electromagnets, switches, and voltage regulators with a PCB concentration of 500 ppm or greater will not be mixed with or added to dielectric fluid from PCB-contaminated electrical equipment; and

C14.3.3.6. Dielectric fluids containing 500 ppm or greater will not be used as dielectric fluid in any electromagnet, switch, or voltage regulator classified as PCB-contaminated electrical equipment.

C14.3.3.7. Capacitors containing PCBs at any concentration must be managed as follows:

C14.3.3.7.1. Use and storage for reuse of PCB large high-voltage capacitors and PCB large low-voltage capacitors which pose an exposure risk to food or feed is prohibited;

C14.3.3.7.2. Use of PCB large high-voltage and PCB large low-voltage capacitors is prohibited unless the capacitor is used within a restricted-access electrical substation or in a contained and restricted-access indoor installation. The indoor installation will not have public access and will have an adequate roof, walls, and floor to contain any release of PCBs.

C14.3.3.8. Any PCB item removed from service will be marked with the date it is removed from service.

C14.3.4. Storage

C14.3.4.1. PCBs and PCB items at concentrations 50 ppm or greater that are to be stored before disposal will be stored in a facility that will assure the containment of PCBs, including:

C14.3.4.1.1. Roofs and walls of storage buildings that exclude rainfall and blowing snow;

C14.3.4.1.2. A containment berm, at least 6 inches high, sufficient to contain twice the internal volume of the largest PCB article or 25 percent of the total internal volume of all PCB articles or containers stored, whichever is greater;

C14.3.4.1.3. Drains, valves, floor drains, expansion joints, sewer lines or other openings constructed to prevent any release from the bermed area;

C14.3.4.1.4. Continuous, smooth and impervious flooring material; and

C14.3.4.1.5. To the maximum extent possible, a new PCB storage area will be located to minimize the risk of release due to seismic activity, floods, or other natural events. For facilities located where they may face such risks, the installation spill prevention and control plan will address the risk.

C14.3.4.2. The following items may be stored temporarily in an area, subject to weekly inspection, that does not comply with the above requirements for up to 30 days from the date of removal from service:

C14.3.4.2.1. Non-leaking PCB items, marked to indicate whether it is a PCB article or PCB equipment;

C14.3.4.2.2. Leaking PCB articles and PCB equipment placed in a non-leaking PCB container that contains sufficient absorbent material to absorb fluid contained in the PCB article or equipment;

C14.3.4.2.3. PCB containers in which non-liquid PCBs have been placed;

C14.3.4.2.4. PCB containers in which PCBs at a concentration between 50-499 ppm have been placed, and whose containers are marked to indicate there is less than 500 ppm PCB.

C14.3.4.3. Non-leaking and structurally-undamaged large high-voltage PCB capacitors and PCB-contaminated electric equipment that have not been drained of free-flowing dielectric fluid may be

stored on pallets, or raised platforms, next to a storage area meeting subsection C14.3.4 criteria if they are inspected weekly.

C14.3.4.4. All other PCB storage areas will be inspected at least monthly.

C14.3.4.5. Containers used for the storage of PCBs will be at least as secure as those required for their transport for disposal by the servicing DRMO.

C14.3.5. Disposal. PCBs will not be disposed of in Greenland. All PCB disposal outside of Greenland will be conducted through the servicing DRMO in accordance with DoD 4160.21-M.

C14.3.6. Elimination of PCB Products

C14.3.6.1. Installations shall minimize the use of PCBs and PCB items without degrading mission performance.

C14.3.6.2. Installations shall not purchase or otherwise take control of PCBs or PCB items for use.

C14.3.6.3. All procurement of transformers or any other equipment containing dielectric or hydraulic fluid shall be accompanied by a manufacturer's certification that the equipment contains no detectable PCBs (less than 2 ppm) at the time of shipment.

C14.3.6.4. Such newly procured transformers and equipment shall have permanent labels affixed stating they are PCB-free (no detectable PCBs).

C15. CHAPTER 15ASBESTOSC15.1. Scope

This Chapter contains criteria to control and abate threats to human health and the environment from asbestos, and describes management of asbestos during removal and disposal. Policy requirements for a comprehensive Occupational Health and Safety program are not covered in this Chapter. To protect personnel from asbestos exposure, refer to DoDI 6055.1, "DoD Occupational Safety and Health Program," and DoDI 6055.5, "Industrial Hygiene and Occupational Health," and concomitant service instructions.

C15.2. Definitions

C15.2.1. Adequately Wet. Sufficiently mix or penetrate with liquid to prevent the release of particulates. If visible emissions are observed coming from ACM, then that material has not been adequately wetted. However, the absence of visible emissions is not sufficient evidence of being adequately wet.

C15.2.2. Asbestos. Generic term used to describe six distinctive varieties of fibrous mineral silicates, including chrysotile, amosite, crocidolite, tremolite asbestos, anthrophyllite asbestos, actinolite asbestos, and any other of these materials that have been chemically treated and/or altered.

C15.2.3. Asbestos - Containing Material (ACM). Any material containing more than one percent asbestos by weight.

C15.2.4. Friable Asbestos. Any material containing more than one percent asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

C15.3. Criteria

C15.3.1. Installations will appoint an asbestos program manager to serve as the single point of contact for all asbestos-related activities.

C15.3.2. Installations will prepare and implement an asbestos management plan. As a minimum, the plan will include the following:

C15.3.2.1. An ACM inventory, conducted by sample and analysis or visual determination.

C15.3.2.2. A notification and education program to tell workers, tenants, and building occupants where potentially friable ACM is located, and how and why to avoid disturbing the ACM; all persons affected should be properly informed;

C15.3.2.3. Regular ACM surveillance to note, assess, and document any changes in the ACM's condition;

C15.3.2.4. Work control/permit systems to control activities which might disturb ACM;

C15.3.2.5. Operations and maintenance (O&M) work practices to avoid or minimize fiber release during activities affecting ACM;

C15.3.2.6. Record keeping to document O&M activities related to asbestos identification management and abatement;

C15.3.2.7. Training for the asbestos program manager as well as custodial and maintenance staff;

C15.3.2.8. Procedures to assess and prioritize identified hazards for abatement; and

C15.3.2.9. Procedures to prevent the use of ACM in new construction.

C15.3.3. Prior to the demolition or renovation of a facility, the installation will make a determination whether or not the activity will remove or disturb ACM, and will record this determination on the project authorization document (e.g., work order).

C15.3.4. Prior to the demolition or renovation of a facility that involves removing or disturbing friable ACM, a written assessment of the action will be prepared and furnished to the installation commander. A copy of the assessment will also be kept on permanent file.

C15.3.5. Installations will remove friable ACM when it poses a threat to release airborne asbestos fibers and cannot be reliably repaired or isolated.

C15.3.6. Before disturbing or demolishing a facility or part of a facility, installations will remove all friable ACM, and ACM with a high degree of probability of becoming friable once disturbed during demolition.

C15.3.7. Disposal. Asbestos Waste will be disposed of in accordance with the following requirements:

C15.3.7.1. Asbestos waste may only be disposed as a solid waste in a MSWLF in accordance with Chapter 7 of these Standards if the GHR Authority concurs and makes a specific finding, in writing, that such land disposal is not in violation of the 1979 Agreement/1987 Protocol with the U.S. If this written exemption is not granted, the asbestos waste must be disposed as a hazardous waste in accordance with Chapter 6 of these Standards.

C15.3.7.2. When disposing of asbestos waste, installations will adequately wet all ACM waste, seal it in a leak proof container, and properly dispose of it in a designated landfill that meets the requirements of Chapter 7 of these Standards. Asbestos is a material that represents a danger to human or animal life. Storage containers holding asbestos will be labeled in English and the host nation languages: "DANGER – CONTAINS ASBESTOS FIBERS – AVOID CREATING DUST – CANCER AND LUNG DISEASE HAZARD." Permanent records documenting the disposal action and site will be maintained.

C15.3.8. DoD schools will comply with applicable requirements 15 U.S.C. 2643(l) and implementing regulations in 40 CFR Part 763, Subpart E.

C16. CHAPTER 16

RADON – RESERVED

C17. CHAPTER 17LEAD-BASED PAINTC17.1. Scope

This Chapter contains criteria to establish and implement a lead hazard management program to identify, control or eliminate lead-based paint hazards, through interim controls or abatement, in child-occupied facilities and military family housing, in a manner protective of human health and the environment. Policy requirements for a comprehensive Occupational Health and Safety program are not covered in this Chapter. To protect personnel from lead exposure, refer to DoDI 6055.1, "DoD Occupational Safety and Health Program," and DoDI 6055.5, "Industrial Hygiene and Occupational Health" and concomitant service instructions.

C17.2. Definitions

C17.2.1. Abatement. Any set of measures designed to permanently eliminate lead-based paint or lead-based paint hazards. Abatement includes the removal of lead-based paint and lead-contaminated dust, the permanent enclosure or encapsulation of lead-based paint, the replacement of components or fixtures painted with lead-based paint, and the removal or covering of lead-contaminated soil. Abatement also includes all preparation, cleanup, disposal, and post-abatement clearance activities associated with such measures.

C17.2.2. Accessible Surface. An interior or exterior surface painted with lead-based paint that is accessible for a young child to mouth or chew.

C17.2.3. Bare Soil. Soil, including sand, not covered by grass, sod, or other live ground covers, or by wood chips, gravel, artificial turf, or similar covering.

C17.2.4. Child-Occupied Facility. A facility, or portion of a facility, visited regularly by the same child, 6 years of age or under, on at least two different days within any week, provided that each day's visit lasts at least 3 hours and the combined weekly visits last at least 6 hours, and the combined annual visits last at least 60 hours. Child-occupied facilities may include, but are not limited to, day-care centers, preschools, playgrounds, and kindergarten classrooms.

C17.2.5. Clearance. Visual evaluation and testing (collection and analysis of environmental samples) conducted after lead-based paint hazard reduction activities, interim controls, and standard treatments to determine that the work is complete and no lead-contaminated bare soil or lead-contaminated settled dust exists in a facility in which children under the age of 6 frequent.

C17.2.6. Deteriorated Paint. Any interior or exterior paint or other coating that is peeling, chipping, chalking, cracking or is otherwise damaged or separated from the substrate.

C17.2.7. Elevated Blood Lead Level. A confirmed concentration of lead in whole blood of 20 µg/dl (micrograms of lead per deciliter) for a single test, or of 15-19 µg/dl in two tests taken at least 3 months apart.

C17.2.8. Encapsulation. The application of any covering or coating that acts as a barrier between the lead-based paint and the environment. Encapsulation may be used as a method of abatement if it is designed to be permanent.

C17.2.9. Enclosure. The use of rigid, durable construction materials that are mechanically fastened to the substrate in order to act as a barrier between lead-based paint and the environment. Enclosure may be used as a method of abatement if it is designed to be permanent.

C17.2.10. Evaluation. A visual evaluation, risk assessment, risk assessment screen, paint inspection, paint testing, or a combination of risk assessment and paint inspection to determine the presence of deteriorated paint, lead-based paint, or a lead-based paint hazard.

C17.2.11. Friction Surface. An interior or exterior surface that is subject to abrasion or friction, including but not limited to, window, floor, and stair surfaces.

C17.2.12. Hazard Reduction. Measures designed to reduce or eliminate human exposure to lead-based paint hazards through methods including interim controls or abatement or a combination of the two.

C17.2.13. Impact Surface. An interior or exterior surface that is subject to damage by repeated sudden force, such as certain parts of doorframes.

C17.2.14. Interim Controls. A set of measures designed to temporarily reduce human exposure or likely exposure to lead-based paint hazards. Interim controls include, but are not limited to, repairs, occasional and ongoing maintenance, painting, temporary containment, specialized cleaning, clearance, ongoing activities, and the establishment and operation of management and resident education programs.

C17.2.15. Lead-Based Paint. Paint or other surface coatings that contain lead equal to or exceeding 1.0 milligram per square centimeter, or 0.5 percent by weight or 5,000 parts per million (ppm) by weight.

C17.2.16. Lead-Based Paint Hazard. Any condition that causes exposure to lead from lead-contaminated dust, lead-contaminated soil, or lead-contaminated paint that is deteriorated or present in accessible surfaces, friction surfaces, or impact surfaces, and that would result in adverse human health effects.

C17.2.17. Lead-Based Paint Inspection. A surface-by-surface investigation to determine the presence of lead-based paint and the provision of a report explaining the results of the investigation.

C17.2.18. Lead-Contaminated Dust. Surface dust that contains an area concentration of:

Surface Concentrations		
Floors (mg/ft²)	Interior Window Sills (mg/ft²)	Window Troughs(mg/ft²)
100	500	800

Notes:

1. "Floors" includes carpeted and uncarpeted floors.
2. For metric units, 1 µg/ft² = 0.01076 mg/sq m.; thus 250 µg/ft² = 2.7 mg/sq m., etc.

C17.2.19. Lead-Contaminated Soil. Bare soil containing lead at or exceeding a concentration of 400 ppm in high contact play areas, or 2000 ppm in areas where contact by children is less likely or frequent.

C17.2.20. Permanent. An expected design life of at least 20 years.

C17.2.21. Reevaluation. A visual evaluation of painted surfaces and limited dust and soil sampling conducted periodically following lead-based paint hazard reduction where lead-based paint is still present.

C17.2.22. Replacement. A strategy of abatement that entails removing building components that have surfaces coated with lead-based paint (such as windows, doors, and trim) and installing new components free of lead-based paint.

C17.2.23. Risk Assessment. An on-site investigation to determine the existence, nature, severity, and location of lead-based paint hazards and the provision of a report explaining the results of the investigation and options for reducing lead-based paint hazards.

C17.2.24. Risk Assessment Screen. A sampling protocol that is used in dwellings that are in relatively good condition and where the probability of finding lead-based hazards are low. The protocol involves inspecting such dwellings and collecting samples from representative locations on the floor, interior windowsills, and window troughs to determine whether conducting a risk assessment is warranted.

C17.3. Criteria

C17.3.1. Installations will:

C17.3.1.1. Develop and implement a multi-disciplinary lead-based paint hazard management program to identify, evaluate, and reduce lead-based paint hazards in child-occupied facilities and military family housing.

C17.3.1.2. Manage identified lead-based paint hazards through interim controls or abatement.

C17.3.1.3. Identify lead-based paint hazards in child-occupied facilities and military family housing using any or all of the following methods:

C17.3.1.3.1. Lead-based paint risk assessment screen. If screen identifies dust-lead levels $>50 \mu\text{g}/\text{ft}^2$ for floors, $250 \mu\text{g}/\text{ft}^2$ for interior window sills, or $400 \mu\text{g}/\text{ft}^2$ for window troughs, perform lead-based paint risk assessment

C17.3.1.3.2. Lead-based paint risk assessments.

C17.3.1.3.3. Routine facility inspection for fire and safety.

C17.3.1.3.4. Occupant, facility manager, and worker reports of deteriorated paint.

C17.3.1.3.5. Results of childhood blood lead screening or reports of children identified to have elevated blood lead levels.

C17.3.1.3.6. Lead-based paint reevaluations.

C17.3.1.3.7. Review of construction, painting, and maintenance histories.

C17.3.1.4. Ensure occupants and worker protection measures are taken during all maintenance, repair, and renovation activities that disturb areas known or assumed to have lead-based paint.

C17.3.1.5. Disclose to occupants of child-occupied facilities and military family housing the presence of any known lead-based paint or lead-based paint hazards and provide information on lead-based paint hazard reduction. In addition, inform occupants of military family housing, prior to conducting

remodeling or renovation projects, of the hazards associated with these activities, and provide information on protecting family members from the hazards of lead-based paint.

C17.3.1.6. Ensure that all personnel involved in lead-based activities, including paint inspection, risk assessment, specification or design, supervision, and abatement, are properly trained.

C17.3.1.7. Dispose of lead-contaminated waste that meets the definition of a hazardous waste (subsection C6.2.5.) in accordance with Chapter 6.

C18. CHAPTER 18SPILL PREVENTION AND RESPONSE PLANNINGC18.1. Scope

This Chapter contains criteria to plan for, prevent, control, and report spills of POL and hazardous substances. It is DoD policy to prevent spills of these substances due to DoD activities and to provide for prompt, coordinated response to contain and clean up spills that might occur. Remediation beyond that required for the initial response is conducted pursuant to DoDI 4715.8, "Environmental Remediation for DoD Activities Overseas,".

C18.2. Definitions

C18.2.1. Hazardous Substance. Any substance having the potential to do serious harm to human health or the environment if spilled or released in reportable quantity. A list of these substances and the corresponding reportable quantities is contained in Chapter 20. The term does not include:

C18.2.1.1. Petroleum, including crude POL or any fraction thereof, that is not otherwise specifically listed or designated as a hazardous substance above.

C18.2.1.2. Natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).

C18.2.2. Facility Incident Commander (FIC) (previously known as the Installation On-scene Coordinator). The official who coordinates and directs DoD control and cleanup efforts at the scene of a POL or hazardous substance spill due to DoD activities on or near the installation. This official is designated by the installation commander.

C18.2.3. Facility Response Team (previously known as the Installation Response Team) (FRT). A team performing emergency functions as defined and directed by the FIC.

C18.2.4. Oil. POL of any kind or in any form, including, but not limited to, petroleum, fuel POL, sludge, POL refuse and POL mixed with wastes other than dredged spoil.

C18.2.5. POL. Refined petroleum, oils, and lubricants.

C18.2.6. Significant spill. An uncontained release to the land or water in excess of any of the following quantities:

C18.2.6.1. For hazardous waste or hazardous substance identified as a result of inclusion in Table AP1.T4, any quantity in excess of the reportable quantity listed in Table AP1.T4;

C18.2.6.2. For POL or liquid or semi-liquid hazardous material, hazardous waste or hazardous substance, in excess of 400 liters (110 gallons);

C18.2.6.3. For other solid hazardous material, in excess of 225 Kg (500 pounds); or

C18.2.6.4. For combinations of POL and liquid, semi-liquid and solid hazardous materials, hazardous waste or hazardous substance, in excess of 340 Kg (750 pounds).

C18.2.6.5. If a spill is contained inside an impervious berm, or on a nonporous surface, or inside a building and is not volatilized and is cleaned up, the spill is considered a contained release and is not considered a significant spill.

C18.2.7. Worst Case Discharge. The largest foreseeable discharge from the facility, under adverse weather conditions, as determined using as a guide the worst case discharge planning volume criteria at Appendix AP2.

C18.3. Criteria

C18.3.1. Plan Requirement. All DoD installations will prepare, maintain, and implement a Spill Prevention and Response Plan, which provides for the prevention, control, and reporting of all spills of POL and hazardous substances. The plan will provide measures to prevent, and to the maximum extent practicable, to remove a worst case discharge from the facility. The plan will be updated at least every 5 years or when there are significant changes to operations. The plan should be kept in a location easily accessible to the FIC and FRT.

C18.3.2. Prevention Section. The prevention section of the plan will, as a minimum, contain the following:

C18.3.2.1. Name, title, responsibilities, duties and telephone number of the designated FIC and an alternate.

C18.3.2.2. General information on the installation including name, type or function, location and address, charts of drainage patterns, designated water protection areas, maps showing locations of facilities described in paragraph C18.3.2.3, critical water resources, land uses and possible migration pathways.

C18.3.2.3. An inventory of storage, handling and transfer sites that could possibly produce a significant spill. For each listing, using maps as appropriate include a prediction of the direction and rate of flow, and total quantity of POL or hazardous substance that might be spilled as a result of a major failure.

C18.3.2.4. An inventory of all POL and hazardous substances at storage, handling, and transfer facilities described in paragraph C18.3.2.3.

C18.3.2.5. Arrangements for Emergency Services. The plan will describe arrangements with installation and/or local police departments, fire departments, hospitals, contractors and emergency response teams to coordinate emergency services.

C18.3.2.6. Means to Contact Emergency Services. The plan will include a telephone number or other means to contact the appropriate emergency service provider (e.g., installation fire department) on a 24-hour basis.

C18.3.2.7. A detailed description of the facility's prevention, control and countermeasures, including structures and equipment for diversion and containment of spills, for each site listed in the inventory. Measures should permit, as far as practical, reclamation of spilled substances. Chapters governing hazardous materials, hazardous waste, POL, underground storage tanks, pesticides and PCBs provide specific criteria for containment structure requirements.

C18.3.2.8. A list of all emergency equipment (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external) and decontamination equipment) at each site listed in the inventory where this equipment is required. This list will be kept up-to-date. In addition, the plan will include the location and a physical description of each item on the list, and a brief outline of its capabilities.

C18.3.2.9. An evacuation plan for each site listed in the inventory, where there is a possibility that evacuation would be necessary. This plan will describe signal(s) to be used to begin evacuation, evacuation routes, alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires), and a designated meeting place.

C18.3.2.10. A description of deficiencies in spill prevention and control measures at each site listed in the inventory, to include corrective measures required, procedures to be followed to correct listed deficiencies and any interim control measures in place. Corrective actions must be implemented within 24 months of the date of plan preparation or revision.

C18.3.2.11. Written procedures for:

C18.3.2.11.1. Operations to preclude spills of POL and hazardous substances

C18.3.2.11.2. Inspections; and

C18.3.2.11.3. Record keeping requirements

C18.3.2.12. Site-specific procedures should be maintained at each site on the facility where significant spills could occur.

C18.3.3. Spill Control Section. The control section of the plan (which may be considered a contingency plan) will identify resources for cleaning up spills at installations and activities, and to provide assistance to other agencies when requested. As a minimum, this section will contain:

C18.3.3.1. Provisions specifying the responsibilities, duties, procedures and resources to be used to contain and clean up spills.

C18.3.3.2. A description of immediate response actions that should be taken when a spill is first discovered.

C18.3.3.3. The responsibilities, composition, and training requirements of the FRT.

C18.3.3.4. Procedures for FRT alert and response to include provisions for:

C18.3.3.4.1. Access to a reliable communications system for timely notification of a POL spill or hazardous substance spill.

C18.3.3.4.2. Public affairs involvement.

C18.3.3.5. A current roster of the persons, and alternates, who must receive notice of a POL or hazardous substance spill, including a DESC representative if applicable. The roster will include name, organization mailing address, and work and home telephone number. Without compromising security, the plan will include provisions for the notification of the emergency coordinator after normal working hours.

C18.3.3.6. The plan will provide for the notification of the FIC, installation commander and local authorities in the event of hazard to human health or environment.

C18.3.3.7. Assignment of responsibilities for making the necessary notifications including notification to the emergency services providers.

C18.3.3.8. Surveillance procedures for early detection of POL and hazardous substance spills.

C18.3.3.9. A prioritized list of various critical water and natural resources that will be protected in the event of a spill.

C18.3.3.10. Other resources addressed in prearranged agreements that are available to the installation to clean up or reclaim a large spill due to DoD activities, if such spill exceeds the response capability of the installation.

C18.3.3.11. Cleanup methods, including procedures and techniques used to identify, contain, disperse, reclaim and remove POL and hazardous substances used in bulk quantity on the installation.

C18.3.3.12. Procedures for the proper reuse and disposal of recovered substances, contaminated POL and absorbent materials, and procedures to be accomplished prior to resumption of operations.

C18.3.3.13. A description of general health, safety and fire prevention precautions for spill cleanup actions.

C18.3.3.14. A public affairs section that describes the procedures, responsibilities, and methods for releasing information in the event of a spill.

C18.3.4. Reporting Section. The reporting section of the plan will address the following:

C18.3.4.1. Recordkeeping when emergency procedures are invoked.

C18.3.4.2. Any significant spill will be reported to the FIC immediately. Immediate actions will be taken to eliminate the source and contain the spill.

C18.3.4.3. The FIC will immediately notify the appropriate In-Theater Component Commander and/or Defense Agency and the Environmental Executive Agent and submit a follow-up written report when:

C18.3.4.3.1. The spill occurs inside a DoD installation and cannot be contained within any required berm or secondary containment; or

C18.3.4.3.2. The spill exceeds 400 liters (110 gallons) of POL; or

C18.3.4.3.3. A water resource has been polluted; or

C18.3.4.3.4. The FIC has determined that the spill is significant.

C18.3.4.4. When a significant spill occurs inside a DoD installation and cannot be contained within the installation boundaries or threatens the local host nation drinking water resource, the appropriate In-Theater Component Commander and/or Defense Agency, Environmental Executive Agent and host nation authorities will be notified immediately.

C18.3.4.5. If a significant spill occurs outside of a DoD installation, the person in charge at the scene will immediately notify the authorities listed in section C18.3.4.4, and additionally will notify the local fire departments and obtain necessary assistance.

C18.3.5. Installations will provide necessary training and spill response drills to ensure the effectiveness of personnel and equipment.

C18.3.6. After completion of the initial response, any remaining free product and/or obviously contaminated soil will be appropriately removed and managed. Further action will be governed by DoDI 4715.8, "Environmental Remediation for DoD Activities Overseas".

C19. CHAPTER 19UNDERGROUND STORAGE TANKSC19.1. Scope

This Chapter contains criteria to control and abate pollution resulting from POL products and hazardous materials stored in underground storage tanks (USTs). Standards for USTs containing hazardous wastes are covered in Chapter 6.

C19.2. Definitions

C19.2.1. POL. Refined petroleum, oils and lubricants.

C19.2.2. Hazardous Material. Any material defined as a hazardous material in Chapter 5. The term does not include:

C19.2.2.1. Petroleum, including crude POL or any fraction thereof, that is not otherwise specifically listed or designated as a hazardous material above.

C19.2.2.2. Natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).

C19.2.3. Tank Tightness Testing. A test which must be capable of detecting a 0.38 liter (0.1 gallon) per hour leak from any portion of the tank that routinely contains product while accounting for the effects of thermal expansion or contraction of the product, vapor pockets, tank deformation, evaporation or condensation, and the location of the water table.

C19.2.4. Underground Storage Tank (UST). Any tank including underground piping connected thereto, larger than 416 liters (110 gallons), that is used to contain POL products or hazardous material and the volume of which, including the volume of connected pipes, is 10 percent or more beneath the surface of the ground, but does not include:

C19.2.4.1. Tanks containing heating oil used for consumption on the premises where it is stored;

C19.2.4.2. Septic tanks;

C19.2.4.3. Storm water or wastewater collection systems;

C19.2.4.4. Flow through process tanks;

C19.2.4.5. Surface impoundments, pits, ponds or lagoons;

C19.2.4.6. Field constructed tanks; or

C19.2.4.7. Hydrant fueling systems.

C19.2.4.8. Storage tanks located in an accessible underground area (such as a basement or vault) if the storage tank is situated upon or above the surface of the floor.

C19.2.4.9. UST containing *de minimis* concentrations of regulated substances, except where paragraph C19.3.3.3 is applicable.

C19.2.4.10. Emergency spill or overflow containment UST systems that are expeditiously emptied after use.

C19.2.5. New UST. Any UST installed on or after 1 October 1994.

C19.2.6. Hazardous Material UST. A UST that contains a hazardous material (but not including hazardous waste as defined in Chapter 6) or any mixture of such hazardous materials, and petroleum, and which is not a petroleum UST.

C19.3. Criteria

C19.3.1. All installations will maintain a UST inventory.

C19.3.2. New POL USTs. All new petroleum UST systems will be properly installed, protected from corrosion, provided with spill/overflow prevention and will incorporate leak detection as described below.

C19.3.2.1. Corrosion Protection. New tanks and piping must be provided with corrosion protection unless constructed of fiberglass or other non-corrodible materials. The corrosion protection system must be certified by competent authority.

C19.3.2.2. Spill/Overflow Protection. New USTs will be provided with spill and overflow prevention equipment, except where transfers are made in the amounts of 95 liters (25 gallons) or less. Where spill and over-fill protection are required, a spill containment box must be installed around the fillpipe. Overflow prevention will be provided by one of the following methods:

C19.3.2.2.1. Automatic shut-off device (set at 95% of tank capacity).

C19.3.2.2.2. High level alarm (set at 90% of tank capacity).

C19.3.2.3. Leak Detection. Leak detection systems must be capable of detecting a 0.38 liter (0.1 gallon) per hour leak rate or a release of 568 liters (150 gallons) (or one percent of tank volume, whichever is less) within 30 days with a probability of detection of 0.95 and a probability of false alarm of not more than 0.05.

C19.3.2.3.1. New USTs will use at least one of the following leak detection methods:

C19.3.2.3.1.1. Automatic tank gauging;

C19.3.2.3.1.2. Vapor monitoring;

C19.3.2.3.1.3. Groundwater monitoring; or

C19.3.2.3.1.4. Interstitial monitoring.

C19.3.2.3.2. All new pressurized UST piping must be equipped with automatic line leak detectors and utilize either an annual tightness test or monthly monitoring.

C19.3.2.3.3. Suction piping will either have a line tightness test conducted every three years or use monthly monitoring.

C19.3.3. Existing POL USTs. Existing POL USTs and piping will be properly closed if not needed or be upgraded or replaced to meet new UST system requirements as indicated in section C19.3.2. by 1 October 2004.

C19.3.3.1. Existing UST and piping not incorporating leak detection will be tightness tested annually in accordance with recognized U.S. industry standards and inventoried monthly to determine system tightness.

C19.3.3.2. All existing leaking UST will be immediately removed from service. If the UST is still required, it will be repaired or replaced. If the UST is no longer required it will be removed from the ground. When a leaking UST is removed, exposed free product and/or obviously contaminated soil in the immediate vicinity of the tank will be appropriately removed and managed. Additional action will be governed by DoDI 4715.8, "Environmental Remediation for DoD Activities Overseas". Under extenuating circumstances (e.g., where the UST is located under a building), the UST will be cleaned and filled with an inert substance, and left in place.

C19.3.3.3. When a UST has not been used for one year, all of the product and sludges must be removed. Subsequently, the tank must be either cleaned and filled with an inert substance, or removed. Tank wastes must be tested in accordance with subsection C9.3.3.

C19.3.4. New hazardous material USTs.

C19.3.4.1. All new hazardous material USTs and piping must meet the same design and construction standards as required for new petroleum USTs and piping, and in addition must be provided with secondary containment for both tank and piping. Secondary containment can be met by using double-walled tanks and piping, liners, or vaults.

C19.3.4.2. Leak Detection. The interstitial space (space between the primary and secondary containment) for tanks and piping must be monitored monthly for liquids or vapors.

C19.3.5. Existing Hazardous Material USTs

C19.3.5.1. Existing hazardous material tanks and piping will be upgraded or replaced to meet the new hazardous material tanks and piping requirements indicated in paragraph C19.3.4 by 1 January 1999.

C19.3.5.2. Existing tanks and piping not incorporating leak detection will be tightness tested annually and inventoried monthly.

C20. APPENDIX 1CHARACTERISTICS OF HAZARDOUS WASTES AND LISTS OF HAZARDOUS WASTES AND HAZARDOUS MATERIALSC20.1. Characteristics of Hazardous WasteC20.1.1. General

C20.1.1.1. A solid waste is a discarded material that may be solid, semi-solid, liquid, or contained gas.

C20.1.1.2. A solid waste becomes a hazardous waste when it exhibits a characteristic of a hazardous waste or is listed as a hazardous waste in this Appendix.

C20.1.1.3. Each hazardous waste is identified by a USEPA Hazardous Waste Number (HW#). A characteristic waste is assigned every USEPA HW# that is applicable. The HW# must be used in complying with the notification, recordkeeping, and reporting requirements.

C20.1.2. Characteristic of Ignitability

C20.1.2.1. A solid waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

C20.1.2.1.1. It is a liquid, other than an aqueous solution containing less than 24 percent alcohol by volume and has a flash point less than 60°C (140°F), as determined by a Pensky-Martens Closed Cup Tester, using the test method specified in ASTM Standard D-93-79 or D-93-80 or a Setaflash Closed Cup Tester, using the test method specified in ASTM Standard D-3278-78 or as determined by an equivalent test method.

C20.1.2.1.2. It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.

C20.1.2.1.3. It is an ignitable compressed gas as determined by appropriate test methods or USEPA.

C20.1.2.1.4. It is an oxidizer.

C20.1.2.2. A solid waste that exhibits the characteristic of ignitability has the EPA Hazardous Waste Number of D001.

C20.1.3. Characteristic of Corrosivity

C20.1.3.1. A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:

C20.1.3.1.1. It is aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5, as determined by a pH meter.

C20.1.3.1.2. It is a liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55°C (130°F) as determined by the test method specified in NACE (National Association of Corrosion Engineers) Standard TM-01-69 as standardized in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods."

C20.1.3.2. A solid waste that exhibits the characteristic of corrosivity has the EPA Hazardous Waste Number of D002.

C20.1.4. Characteristic of Reactivity

C20.1.4.1. A solid waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:

C20.1.4.1.1. It is normally unstable and readily undergoes violent change without detonating.

C20.1.4.1.2. It reacts violently with water.

C20.1.4.1.3. It forms potentially explosive mixtures with water.

C20.1.4.1.4. When mixed with water, it generates toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or the environment.

C20.1.4.1.5. It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5, can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.

C20.1.4.1.6. It is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement.

C20.1.4.1.7. It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure.

C20.1.4.1.8. It is a forbidden explosive.

C20.1.4.2. A solid waste that exhibits the characteristic of reactivity has the EPA Hazardous Waste Number of D003.

C20.1.5. Toxicity Characteristic

C20.1.5.1. A solid waste exhibits the characteristic of toxicity if, using the Toxicity Characteristic Leaching Procedure, the extract from a representative sample of the waste contains any of the contaminants listed in Table AP1.T1 or AP1.1 of this Appendix, at the concentration equal to or greater than the respective value given in that Table. Where the waste contains less than 0.5 percent filterable solids, the waste itself is considered to be the extract for the purpose of this section.

C20.1.5.2. A solid waste that exhibits the characteristic of toxicity has the EPA Hazardous Waste Number specified in Table AP1.T1 or section AP1.2 that corresponds to the toxic contaminant causing it to be hazardous.

C20.2. Lists of Hazardous Wastes

C20.2.1. General

C20.2.1.1. A solid waste is a hazardous waste if it is listed in this section.

C20.2.1.2. The basis for listing the classes or types of wastes listed employed one or more of the following Hazard Codes:

Ignitable Waste	(I)
Corrosive Waste	(C)
Reactive Waste	(R)
Toxicity Characteristic Waste	(E)
Acute Hazardous Waste	(H)
Toxic Waste	(T)

C20.2.1.3. Each hazardous waste listed in section AP1.2 of this Appendix is assigned a USEPA Hazardous Waste Number that precedes the name of the waste. This number must be used in complying with the notification, recordkeeping, and reporting requirements of these alternate standards.

C20.2.2. Hazardous Wastes from Non-Specific Sources. The solid wastes in Table AP1.T3 are listed hazardous wastes from non-specific sources. These hazardous wastes are designated with an "F."

C20.2.3. The solid wastes listed in Table AP1.T4, annotated "K" as the first character of the USEPA HW Number column, are listed hazardous wastes from specific sources.

C20.2.4. Discarded Commercial Chemical Products, Off-Specification Species, Container Residues, and Spill Residues Thereof

C20.2.4.1.1. The following materials or items are hazardous wastes if and when they are discarded or intended to be discarded when they are mixed with waste oil or used oil or other material and applied to the land for dust suppression or road treatment, when they are otherwise applied to the land in lieu of their original intended use or when they are contained in products that are applied to the land in lieu of their original intended use, or when, in lieu of their original intended use, they are produced for use as (or as a component of) a fuel, distributed for use as a fuel, or burned as a fuel.

C20.2.4.1.1.1. Any commercial chemical product, or manufacturing chemical intermediate having the generic name listed in Table AP1.T4, annotated "P" or "U" as the first character in the USEPA waste number.

C20.2.4.1.1.2. Any off-specification commercial chemical product or manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in Table AP1.T4, annotated "P" or "U" as the first character in the USEPA waste number.

C20.2.4.1.1.3. Any residue remaining in a container or in an inner liner removed from a container that has held any commercial chemical product or manufacturing chemical intermediate having the generic name listed in Table AP1.T4, annotated "P" or "U" as the first character in the USEPA waste number, unless the container is empty. [Comment: Unless the residue is being beneficially used or reused, or legitimately recycled or reclaimed; or being accumulated, stored, transported or treated prior to such use, re-use, recycling or reclamation, the residue to be intended for discard, and thus, a hazardous waste. An example of a legitimate re-use of the residue would be where the residue remains in the

container and the container is used to hold the same commercial chemical product or manufacturing chemical intermediate it previously held. An example of the discard of the residue would be where the drum is sent to a drum reconditioner who reconditions the drum but discards the residue.]

C20.2.4.1.1.4. Any residue or contaminated soil, water or other debris resulting from the cleanup of a spill into or on any land or water of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in Table AP1.T4, annotated "P" or "U" as the first character in the USEPA waste number, or any residue or contaminated soil, water or other debris resulting from the cleanup of a spill, into or on any land or water, of any off-specification chemical product and manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in Table AP1.T4., annotated "P" or "U" as the first character in the USEPA waste number of this section. [Comment: The phrase "commercial chemical product or manufacturing chemical intermediate having the generic name listed in..." refers to a chemical substance which is manufactured or formulated for commercial or manufacturing use which consists of the commercially pure grade of the chemical, any technical grades of the chemical that are produced or marketed, and all formulations in which the chemical is the sole active ingredient. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in Table AP1.T4, annotated "P" or "U" as the first character in the USEPA waste number. Where a manufacturing process waste is deemed to be a hazardous waste because it contains a substance listed in Table AP1.T4, annotated "P" or "U" as the first character in the USEPA waste number, such waste will be listed in paragraph AP1.2.2 above or will be identified as a hazardous waste by the characteristics set forth in section AP1.1 of this Appendix.]

C20.2.4.1.1.5. The commercial chemical products, manufacturing chemical intermediates or off-specification commercial chemical products or manufacturing chemical intermediates referred to in Table AP1.T4, annotated "P" as the first character in the USEPA waste number are hereby identified as acute hazardous wastes (H). [Comment: For the convenience of the regulated community the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), and R (Reactivity). Absence of a letter indicates that the compound only is listed for acute toxicity.] These wastes and their corresponding USEPA Hazardous Waste Numbers are listed in Table AP1.T4, annotated "P" as the first character in the USEPA waste number.

C20.2.4.1.1.6. The commercial chemical products, manufacturing chemical intermediates, or off-specification commercial chemical products referred to in Table AP1.T4, subparagraphs AP1.2.4.1.1.1 through AP1.2.4.1.1.4 of this section, are hereby identified as toxic wastes (T), unless otherwise designated. [Comment: For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letter T (Toxicity), R (Reactivity), I (Ignitability), and C (Corrosivity). Absence of a letter indicates that the compound is only listed for toxicity.]

Table APl.T1. Maximum Concentration of Contaminants for the Toxicity Characteristic

USEPA HW No. ¹	Contaminant	CAS No. ²	Regulatory Level (mg/L)
D004	Arsenic	7440-38-2	5.0
D005	Barium	7440-39-3	100.0
D006	Cadmium	7440-43-2	1.0

D042	2,4,6-Trichlorophenol	88-06-2	2.0
D043	Vinyl Chloride	75-01-4	0.2

Notes

1. U.S. EPA Hazardous Waste number.
2. Chemical Abstracts Service number.

Table AP1.T3. Listed Hazardous Wastes from Non-Specific Sources

USEPA HW No. ¹	Hazardous Waste	Hazard Code
F001	The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F002	The following spend halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F003	The following spent non-halogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(I) ²
F004	The following spent non-halogenated solvents: Cresols and cresylic acid, and nitrobenzene; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F005	The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(I,T)
F006	Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.	(T)
F007	Spent cyanide plating bath solutions from electroplating operations.	(R,T)
F008	Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.	(R,T)
F009	Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.	(R,T)

Table AP1.T3. Listed Hazardous Wastes from Non-Specific Sources (continued)

USEPA HW No. ¹	Hazardous Waste	Hazard Code
F010	Quenching bath residues from oil baths from metal heat treating operations where cyanides are used in the process.	(R,T)
F011	Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations.	(R,T)
F012	Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process.	(T)
F019	Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusion conversion coating process.	(T)
F020	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- or tetrachlorophenol, or of intermediates used to produce their pesticide derivatives (This listing does not include wastes from the production of Hexachlorophene from highly purified 2,4,5- trichlorophenol).	(H)
F021	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of pentachlorophenol, or of intermediates used to produce its derivatives.	(H)
F022	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzenes under alkaline conditions.	(H)
F023	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- and tetrachlorophenols (This listing does not include wastes from equipment used only for the production or use of Hexachlorophene from highly purified 2,4,5- trichlorophenol).	(H)
F024	Process wastes, including but not limited to, distillation residues, heavy ends, tars, and reactor clean-out wastes, from the production of certain chlorinated aliphatic hydrocarbons by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution (This listing does not include wastewaters, wastewater treatment sludges, spent catalysts, and wastes listed in Sec26131 or Sec26132).	(T)
F025	Condensed light ends, spent filters and filter aids, and spent desiccant wastes from the production of certain chlorinated aliphatic hydrocarbons, by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution.	(T)
F026	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzene under alkaline conditions.	(H)

Table AP1.T3. Listed Hazardous Wastes from Non-Specific Sources (continued)

USEPA HW No. ¹	Hazardous Waste	Hazard Code
F027	Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols (This listing does not include formulations containing Hexachlorophene synthesized from prepurified 2,4,5- trichlorophenol as the sole component).	(H)
F028	Residues resulting from the incineration or thermal treatment of soil contaminated with EPA Hazardous Waste Numbers F020, F021, F022, F023, F026, and F027.	(T)
F032	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use or have previously used chlorophenolic formulations (except potentially cross- contaminated wastes that have had the F032 waste code deleted in accordance with Sec 26135 of this chapter or potentially cross- contaminated wastes that are otherwise currently regulated as hazardous wastes (i.e., F034 or F035), and where the generator does not resume or initiate use of chlorophenolic formulations). This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(T)
F034	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use creosote formulations. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(T)
F035	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chromium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(T)
F037	Petroleum refinery primary oil/water/solids separation sludge—Any sludge generated from the gravitational separation of oil/water/ solids during the storage or treatment of process wastewaters and oily cooling wastewaters from petroleum refineries. Such sludges include, but are not limited to, those generated in: oil/water/ solids separators; tanks and impoundments; ditches and other conveyances; sumps; and storm water units receiving dry weather flow. Sludge generated in storm water units that do not receive dry weather flow, sludges generated from non- contact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges generated in aggressive biological treatment units as defined in Sec 26131(b)(2) (including sludges generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and K051 wastes are not included in this listing.	(T)

Table AP1.T3. Listed Hazardous Wastes from Non-Specific Sources (continued)

USEPA HW No. ¹	Hazardous Waste	Hazard Code
F038	Petroleum refinery secondary (emulsified) oil/water/solids separation sludge—Any sludge and/or float generated from the physical and/or chemical separation of oil/water/ solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in: induced air flotation (IAF) units, tanks and impoundments, and all sludges generated in DAF units. Sludges generated in storm water units that do not receive dry weather flow, sludges generated from non-contact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges and floats generated in aggressive biological treatment units as defined in Sec 26131(b)(2) (including sludges and floats generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and F037, K048, and K051 wastes are not included in this listing.	(T)
F039	Leachate (liquids that have percolated through land disposed wastes) resulting from the disposal of more than one restricted waste classified as hazardous under subpart D of this part (Leachate resulting from the disposal of one or more of the following EPA Hazardous Wastes and no other Hazardous Wastes retains its EPA Hazardous Waste Number(s): F020, F021, F022, F026, F027, and/or F028)	(T)

Notes

1. U.S. EPA Hazardous Waste number.
2. (I,T) should be used to specify mixtures containing ignitable and toxic constituents.

Table AP1.T4. List of Hazardous Waste/Substances/Materials
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No. ¹	Threshold Planning Quantity (Pounds) ²	USEPA HW No. ³	RQ (Pounds) ⁴
Acenaphthene	83329			100

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No. ¹	Threshold Planning Quantity (Pounds) ²	USEPA HW No. ³	RQ (Pounds) ⁴
F001			F001	10
The following spent halogenated solvents used in degreasing; all spent solvent mixtures/blends used in degreasing containing, before use, a total of 10 percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.				
(a) Tetrachloroethylene	127184		U210	100
(b) Trichloroethylene	79016		U228	100
(c) Methylene chloride	75092		U080	1,000
(d) 1,1,1-Trichloroethane	71556		U226	1,000
(e) Carbon tetrachloride	56235		U211	10
(f) Chlorinated fluorocarbons	NA			5,000
F002			F002	10
The following spent halogenated solvents: all spent solvent mixtures/blends containing, before use, a total of 10 percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.				
(a) Tetrachloroethylene	127184		U210	100
(b) Methylene chloride	75092		U080	1,000
(c) Trichloroethylene	79016		U228	100
(d) 1,1,1-Trichloroethane	71556		U226	1,000
(e) Chlorobenzene	108907		U037	100
(f) 1,1,2-Trichloro-1,2,2-trifluoroethane	76131			5,000

(h) Trichlorofluoromethane	75694		U121	5,000
(i) 1,1,2-Trichloroethane	79005		U227	100
F003			F003	100
The following spent non-halogenated solvents and the still bottoms from the recovery of these solvents:				
(a) Xylene	1330207			1,000
(b) Acetone	67641			5,000
(c) Ethyl acetate	141786			5,000
(d) Ethylbenzene	100414			1,000
(e) Ethyl ether	60297			100
(f) Methyl isobutyl ketone	108101			5,000
(g) n-Butyl alcohol	71363			5,000
(h) Cyclohexanone	108941			5,000
(i) Methanol	67561			5,000

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No. ¹	Threshold Planning Quantity (Pounds) ²	USEPA HW No. ³	RQ (Pounds) ⁴
F004			F004	100
The following spent non-halogenated solvents and the still bottoms from the recovery of these solvents:				
(a) Cresols/Cresylic acid	1319773		U052	100
(b) Nitrobenzene	98953		U169	1,000
F005			F005	100
The following spent non-halogenated solvents and the still bottoms from the recovery of these solvents:				
(a) Toluene	108883		U220	1,000
(b) Methyl ethyl ketone	78933		U159	5,000
(c) Carbon disulfide	75150		P022	100
(d) Isobutanol	78831		U140	5,000
(e) Pyndine	110861		U196	1,000
F006			F006	10
Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum, (2) tin plating on carbon steel, (3) zinc plating (segregated basis) on carbon steel, (4) aluminum or zinc-aluminum plating on carbon steel, (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel, and (6) chemical etching and milling of aluminum.				
F007			F007	10
Spent cyanide plating bath solutions from electroplating operations.				
F008			F008	10
Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.				
F009			F009	10
Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.				
F010			F010	10
Quenching bath residues from oil baths from metal heat treating operations where cyanides are used in the process.				
F011			F011	10
Spent cyanide solution from salt bath pot cleaning from metal heat treating operations.				
F012			F012	10
Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process.				
F019			F019	10
Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusive coating process.				
F020			F020	1
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri-or-tetrachlorophenol, or of intermediates used to produce their pesticide derivatives. (This listing does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.)				

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No.¹	Threshold Planning Quantity (Pounds)²	USEPA HW No. ³	RQ (Pounds)⁴
F021			F021	1
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of pentachlorophenol, or of intermediates used to produce its derivatives.				
F022			F022	1
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzenes under alkaline conditions.				
F023			F023	1
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- and tetrachlorophenols. (This listing does not include wastes from equipment used only for the production or use of hexa-chlorophene from highly purified, 2,4,5-tri-chlorophenol.)				
F024			F024	1
Wastes, including but not limited to distillation residues, heavy ends, tars, and reactor cleanout wastes, from the production of chlorinated aliphatic hydrocarbons, having carbon content from one to five, utilizing free radical catalyzed processes. (This listing does not include light ends, spent filters and filter aids, spent dessicants(sic), wastewater, wastewater treatment sludges, spent catalysts, and wastes listed in Section 261.32.)				
F025			F025	1
Condensed light ends, spent filters and filter aids, and spent desiccant wastes from the production of certain chlorinated aliphatic hydrocarbons, by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution.				
F026			F026	1
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-penta-, or hexachlorobenzene under alkaline conditions.				
F027			F027	1
Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing hexachlorophene synthesized from prepurified 2,4,5-tri-chlorophenol as the sole component.)				
F028			K028	1
Residues resulting from the incineration or thermal treatment of soil contaminated with EPA Hazardous Waste Numbers F020, F021, F022, F023, F026, and F027.				

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No. ¹	Threshold Planning Quantity (Pounds) ²	USEPA HW No. ³	RQ (Pounds) ⁴
F032			F032	1
Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use or have previously used chlorophenolic formulations (except potentially cross-contaminated wastes that have had the F032 waste code deleted in accordance with 261.35 of this chapter or potentially cross-contaminated wastes that are otherwise currently regulated as hazardous wastes (i.e., F034 or F035), and where the generator does not resume or initiate use of chlorophenolic formulations). This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.				
F034			F034	1
Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use creosote formulations. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.				
F035			F035	1
Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chromium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.				
F037			F037	1
Petroleum refinery primary oil/water/solids separation sludge--any sludge generated from the gravitational separation of oil/water/solids during the storage or treatment of process wastewaters and oily cooling wastewaters from petroleum refineries. Such sludges include, but are not limited to, those generated in: oil/water/solids separators; tanks and impoundment; ditches and other conveyances; sumps; and storm water units receiving dry weather flow. Sludge generated in storm water units that do not receive dry weather flow, sludges generated from non-contact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges generated in aggressive biological treatment units as defined in 261.31(b)(2) (including sludges generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and K051 wastes are not included in this listing.				
F038			F038	1
Petroleum refinery secondary (emulsified) oil/water/solids separation sludge--any sludge and/or float generated from the physical and/or chemical separation of oil/water/solids in process wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in: induced air flotation (IAF) units, tanks and impoundments, and all sludges generated in DAF units. Sludges generated in storm water units that do not receive dry weather flow, sludges generated from once-through non-contact cooling waters segregated from treatment from other process or oil cooling wastes, sludges and floats generated in aggressive biological treatment units as defined in 261.31(b) (2) (including sludges and floats generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and F037, K048, and K051 wastes are not included in this listing.				
K001			K001	1
Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and/or pentachlorophenol.				
K002			K002	10
Wastewater treatment sludge from the production of chrome yellow and orange pigments.				

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No.¹	Threshold Planning Quantity (Pounds)²	USEPA HW No.³	RQ (Pounds)⁴
K003			K003	10
Wastewater treatment sludge from the production of molybdate orange pigments.				
K004			K004	10
Wastewater treatment sludge from the production of zinc yellow pigments.				
K005			K005	10
Wastewater treatment sludge from the production of chrome green pigments.				
K006			K006	10
Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).				
K007			K007	10
Wastewater treatment sludge from the production of iron blue pigments.				
K008			K008	10
Oven residue from the production of chrome oxide green pigments.				
K009			K009	10
Distillation bottoms from the production of acetaldehyde from ethylene.				
K010			K010	10
Distillation side cuts from the production of acetaldehyde from ethylene.				
K011			K011	10
Bottom stream from the wastewater stripper in the production of acrylonitrile.				
K013			K013	10
Bottom stream from the acetonitrile column in the production of acrylonitrile.				
K014			K014	5,000
Bottoms from the acetonitrile purification column in the production of acrylonitrile.				
K015			K015	10
Still bottoms from the distillation of benzyl chloride.				
K016			K016	1
Heavy ends or distillation residues from the production of carbon tetrachloride.				
K017			K017	10
Heavy ends (still bottoms) from the purification column in the production of epi-chlorohydrin.				
K018			K018	1
Heavy ends from the fractionation column in ethyl chloride production.				
K019			K019	1
Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.				
K020			K020	1
Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.				
K021			K021	10
Aqueous spent antimony catalyst waste from fluoromethanes production.				
K022			K022	1
Distillation bottom tars from the production of phenol/acetone from cumene.				

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No.¹	Threshold Planning Quantity (Pounds)²	USEPA HW No. ³	RQ (Pounds)⁴
K023			K023	5,000
Distillation light ends from the production of ophthalic anhydride from naphthalene.				
K024			K024	5,000
Distillation bottoms from the production of phthalic anhydride from naphthalene.				
K025			K025	10
Distillation bottoms from the production of nitrobenzene by the nitration of benzene.				
K026			K026	1,000
Stripping still tails from the production of methyl ethyl pyridines.				
K027			K027	10
Centrifuge and distillation residues from toluene diisocyanate production.				
K028			K028	1
Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.				
K029			K029	1
Waste from the product steam stripper in the production of 1,1,1-trichloroethane.				
K030			K030	1
Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.				
K031			K031	1
By-product salts generated in the production of MSMA and cacodylic acid.				
K032			K032	10
Wastewater treatment sludge from the production of chlordanes.				
K033			K033	10
Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordanes.				
K034			K034	10
Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordanes.				
K035			K035	1
Wastewater treatment sludges generated in the production of creosote.				
K036			K036	1
Still bottoms from toluene reclamation distillation in the production of disulfoton.				
K037			K037	1
Wastewater treatment sludges from the production of disulfoton.				
K038			K038	10
Wastewater from the washing and stripping of phorate production.				
K039			K039	10
Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.				
K040			K040	10
Wastewater treatment sludge from the production of phorate.				
K041			K041	1
Wastewater treatment sludge from the production of toxaphene.				

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No. ¹	Threshold Planning Quantity (Pounds) ²	USEPA HW No. ³	RQ (Pounds) ⁴
K042			K042	10
Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T.				
K043			K043	10
2,6-Dichlorophenol waste from the production of 2,4-D.				
K044			K044	10
Wastewater treatment sludges from the manufacturing and processing of explosives.				
K045			K045	10
Spent carbon from the treatment of wastewater containing explosives.				
K046			K046	10
Wastewater treatment sludges from the manufacturing, formulation, and loading of lead-based initiating compounds.				
K047			K047	10
Pink/red water from TNT operations.				
K048			K048	10
Dissolved air flotation (DAF) float from the petroleum refining industry.				
K049			K049	10
Slop oil emulsion solids from the petroleum refining industry.				
K050			K050	10
Heat exchanger bundle cleaning sludge from the petroleum refining industry.				
K051			K051	10
API separator sludge from the petroleum refining industry.				
K052			K052	10
Tank bottoms (leaded) from the petroleum refining industry.				
K060			K060	1
Ammonia still lime sludge from coking operations.				
K061			K061	10
Emission control dust/sludge from the primary production of steel in electric furnaces.				
K062			K062	10
Spent pickle liquor generated by steel finishing operations of facilities within the iron and steel industry (SIC Codes 331 and 332).				
K064			K064	10
Acid plant blowdown slurry/sludge resulting from thickening of blowdown slurry from primary copper production.				
K065			K065	10
Surface impoundment solids contained in and dredged from surface impoundments at primary lead smelting facilities.				
K066			K066	10
Sludge from treatment of process wastewater and/or acid plant blowdown from primary zinc production.				

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No.¹	Threshold Planning Quantity (Pounds)²	USEPA HW No.³	RQ (Pounds)⁴
K069			K069	10
Emission control dust/sludge from secondary lead smelting.				
K071			K071	1
Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.				
K073			K073	10
Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.				
K083			K083	100
Distillation bottoms from aniline extraction.				
K084			K084	1
Wastewater treatment sludges generated during the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.				
K085			K085	10
Distillation or fractionation column bottoms from the production of chlorobenzenes.				
K086			K086	10
Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, driers, soaps, and stabilizers containing chromium and lead.				
K087			K087	100
Decanter tank tar sludge from coking operations.				
K088			K088	10
Spent potliners from primary aluminum reduction.				
K090			K090	10
Emission control dust or sludge from ferrochromiumsilicon production.				
K091			K091	10
Emission control dust or sludge from ferrochromium production.				
K093			K093	5,000
Distillation light ends from the production of phthalic anhydride from ortho-xylene.				
K094			K094	5,000
Distillation bottoms from the production of phthalic anhydride from ortho-xylene.				
K095			K095	100
Distillation bottoms from the production of 1,1,1-trichloroethane.				
K096			K096	100
Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.				
K097			K097	1
Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.				
K098			K098	1
Untreated process wastewater from the production of toxaphene.				

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No. ¹	Threshold Planning Quantity (Pounds) ²	USEPA HW No. ³	RQ (Pounds) ⁴
K099			K099	10
Untreated wastewater from the production of 2,4-D.				
K100			K100	10
Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting.				
K101			K101	1
Distillation tar residues from the distillation of aniline-based compounds in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.				
K102			K102	1
Residue from the use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.				
K103			K103	100
Process residues from aniline extraction from the production of aniline.				
K104			K104	10
Combined wastewater streams generated from nitrobenzene/aniline production.				
K105			K105	10
Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.				
K106			K106	1
Wastewater treatment sludge from the mercury cell process in chlorine production.				
K107			K107	10
Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazines.				
K108			K108	10
Condensed column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.				
K109			K109	10
Spent filter cartridges from product purification from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.				
K110			K110	10
Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.				
K111			K111	10
Product washwaters from the production of dinitrotoluene via nitration of toluene.				
K112			K112	10
Reaction by-product water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.				
K113			K113	10
Condensed liquid light ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.				

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No.¹	Threshold Planning Quantity (Pounds)²	USEPA HW No.³	RQ (Pounds)⁴
K114			K114	10
Vicinals from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.				
K115			K115	10
Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.				
K116			K116	10
Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.				
K117			K117	1
Wastewater from the reaction vent gas scrubber in the production of ethylene bromide via bromination of ethene.				
K118			K118	1
Spent absorbent solids from purification of ethylene dibromide in the production of ethylene dibromide.				
K123			K123	10
Process wastewater (including supernates, filtrates, and washwaters) from the production of ethylenebisdithiocarbamic acid and its salts.				
K124			K124	10
Reactor vent scrubber water from the production of ethylene- bisdithiocarbamic acid and its salts.				
K125			K125	10
Filtration, evaporation, and centrifugation solids from the production of ethylenebisdithiocarbamic acid and its salts.				
K126			K126	10
Baghouse dust and floor sweepings in milling and packaging operations from the production or formulation of ethylene-bisdithiocarbamic acid and its salts.				
K131			K131	100
Wastewater from the reactor and spent sulfuric acid from the acid dryer in the production of methyl bromide.				
K132			K132	1,000
Spent absorbent and wastewater solids from the production of methyl bromide.				
K136			K136	1
Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.				
K141			K141	1
Process residues from the recovery of coal tar, including but not limited to, tar collecting sump residues from the production of coke or coal or the recovery of coke by-products produced from coal. This listing does not include K087 (decanter tank tar sludge from coking operations).				
K142			K142	1
Tar storage tank residues from the production of coke or from the recovery of coke by-products produced from coal.				

Table AP1.T4. List of Hazardous Waste/Substances/Materials (continued)
(All notes appear at the end of the table.)

Hazardous Waste/Substance/Material	CAS No.¹	Threshold Planning Quantity (Pounds)²	USEPA HW No.³	RQ (Pounds)⁴
K143			K143	1
Process residues from the recovery of light oil, including, but not limited to, those generated in stills, decanters, and wash oil recovery units from the recovery of coke by-products produced from coal.				
K144			K144	1
Wastewater treatment sludges from light oil refining, including, but not limited to, intercepting or contamination sump sludges from the recovery of coke by-products produced from coal.				
K145			K145	1
Residues from naphthalene collection and recovery operations from the recovery of coke by-products produced from coal.				
K147			K147	1
Tar storage tank residues from coal tar refining.				
K148			K148	1
Residues from coal tar distillation, including, but not limited to, still bottoms.				
K149			K149	10
Distillation bottoms from the production of alpha- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. [This waste does not include still bottoms from the distillation of benzyl chloride.]				
K150			K150	10
Organic residuals, excluding spent carbon adsorbent, from the spent chlorine gas and hydrochloric acid recovery processes associated with the production of alpha- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups.				
K151			K151	10
Wastewater treatment sludges, excluding neutralization and biological sludges, generated during the treatment of wastewaters from the production of alpha- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups.				
K157			K157	++
Wastewaters (including scrubber waters, condenser waters, washwaters, and separation waters) from the production of carbamates and carbamoyl oximes. (This listing does not include sludges derived from the treatment of these wastewaters.)				
K158			K158	++
Bag house dusts and filter/separation solids from the production of carbamates and carbamoyl oximes.				
K159			K159	++
Organics from the treatment of thiocarbamate wastes.				
K160			K160	++
Solids (including filter wastes, separation solids, and spent catalysts) from the production of thiocarbamates and solids from the treatment of thiocarbamate wastes.				
K161			K161	++
Purification solids (including filtration, evaporation, and centrifugation solids), bag house dust, and floor sweepings from the production of dithiocarbamate acids and their salts. (This listing does not include K125 or K126.)				

Notes:

¹ Chemical Abstract Service (CAS) Registry Number.

²Quantity in storage above which Environmental Executive Agent must be notified (See Chapter 5).

³U.S. Environmental Protection Agency Hazardous Waste Number.

⁴Reportable quantity (RQ) release which requires notification (See Chapter 18).

++ No reporting of releases of this hazardous substance is required if the diameter of the pieces of the solid metal released is equal to or exceeds 100 micrometers (0.004 inches).

+++ The RQ for asbestos is limited to friable forms only.

Indicates that the RQ is subject to change when the assessment of potential carcinogenicity is completed.

The statutory RQ for this hazardous substance may be adjusted in a future rulemaking; until then the statutory RQ applies.

1* Indicates that the 1-pound RQ is a statutory RQ.

** Indicates that no RQ is being assigned to the generic or broad class.

(1+) Indicates that the statutory source for designation of this hazardous substance under CERCLA is CWA section 311(b)(4).

(2+) Indicates that the statutory source for designation of this hazardous substance under CERCLA is CWA section 30711(a)(4).

(3+) Indicates that the statutory source for designation of this hazardous substance under CERCLA is CAA section 112.

(4+) Indicates that the statutory source for designation of this hazardous substance under CERCLA is RCRA section 3001.

C21. APPENDIX 2DETERMINATION OF WORST CASE DISCHARGE PLANNING VOLUME

C21.1. This Appendix provides criteria to determine, on an installation-specific basis, the extent of a worst-case discharge.

C21.2. This Appendix provides criteria to determine the volume of oil or hazardous substance to be used in planning for a worst case discharge.

C21.2.1. Single Tank Facilities. For facilities containing only one aboveground oil or hazardous substance storage tank, the worst case discharge planning volume equals the capacity of the oil storage tank. If adequate secondary containment (sufficiently large to contain the capacity of the above ground oil or hazardous substance storage tank plus sufficient freeboard to allow for precipitation) exists for the oil storage tank, multiply the capacity of the tank by 0.8.

C21.2.2. Multiple Tank Facilities

C21.2.2.1. Facilities having no secondary containment. If none of the above ground storage tanks at the facility have adequate secondary containment, the worst case planning volume equals the total above ground oil and hazardous substance storage capacity at the facility.

C21.2.2.2. Facilities having complete secondary containment. If every above ground storage tank at the facility has adequate secondary containment, the worst case planning volume equals the capacity of the largest single above ground oil or hazardous substance storage tank.

C21.2.2.3. Facilities having partial secondary containment. If some, but not all above ground storage tanks at the facility have adequate secondary containment, the worst case planning volume equals the sum of:

C21.2.2.3.1. The total capacity of the above ground oil and hazardous substance storage tanks that lack adequate secondary containment; plus

C21.2.2.3.2. The capacity of the largest single above ground oil or hazardous substance storage tank that has adequate secondary containment.

C21.2.3. For purposes of this Appendix, the term "adequate secondary containment" means an impervious containment system such as a dike, berm, containment curb, drainage system or other device that will prevent the escape of spilled material into the surrounding soil.
