Subject: New Office windows (no not windows 95)
I have prepared a new version of our Windows operating system for your computers and will be installing it over the next week or so. If you have ANY documents or special settings on the C: drive you will need to save them or write them down. The C: of every machine will be wiped and reformatted. After the install of the new software you can place the settings back on to your machine.I hope this release will cure some of the lockups we have been having in WP.thanks.
