Subject: New Button on PostponementDetail

This is the latest on the Routine and Non-Routine Release buttons on the postponement detail form. For all Postponements that are Routine you need to check the RoutinePostponement Box located in the lower lefthand corner of the postponement detail. For all Releases that are NON-Routine you need to check the Non-routine Release button in the box below Routine box in the lower lefthand corner. In order for this to take effect all NON-Routine Releases will need to be Marked in the Database. Any Releases that are marked Routine can be left that way. In the future team members do not need to take any action on these buttons if the postponement is non-routine or the release is routine. If you have any questions let me know.
