Subject: Alarm system
The guards at the security desk raised two issues this morning about the alarm system. First, they said that there is an "ear piercing" 5-10 second alarm that goes off in the morning when I enter. I showed them what I do when I come in (one of the guards came up) and he agreed that there was nothing that I could do to speed up the process. He suggested that we add some kind of a timing delay so that they do not go deaf.Second, they said that their code has apparently been changed and that they are thus unable to turn off the alarm.
Body: They need to have this capability.
