Subject: Printing Problems...

Body: I just wanted to let you know that I could not print this morning. I had to reboot my computer in order to print.Here is what happens when I try to print --I print "full document" and it does all of its normal stuff, but nothing comes out of the printer. I check to make sure the printer is on, has paper, etc... I try to print again. The computer does all of its normal stuff, but nothing comes out of the printer. I look into "Print Manager" and it tells me that the last two print jobs were "OK." So, it seems that the computer thinks that everything is handy dandy, but nothing prints.I was able to print when I rebooted. (Remember, last week, that didn't work.)Weird, huh?
