Subject: federal register printing

I spoke with the guy who came up with the designs for us at the Federal Register. He said that we could save an additional 10% (total of 30%) if we typeset coded the disk that we send over. He is sending me a disk with the sample so that we can see the codes. He also mentioned that aside from the cost savings doing this would ensure that the document is always printed properly--sometimes the folks typesetting it will change the format. Anyway, he thought that if we pull from a database that setting these codes in the form would be relatively simple. I'll forward the disk to Chet when I get it and we'll see.
