Subject: Connally bullet fragments/CE 842
To add to the confusion, HSCA Vol. 7, re: work of firearms panel, refers to CE 842 (Connally bullet fragments) as consisting of "Four lead-like fragments. [emphasis added]. The smallest was identified as having come from Governor Connally's arm [implying what about the others?]. Page 367.FYI. Photos of the fragments and envelope on page 841 of WC Volume XVII, and/or page 392 of HSCA Volume 7.On a related note, see page 365 of HSCA Volume 7, top of page: "The findings and conclusions were prepared by staff of the House Select Committee on Assassinations based on material submitted by the panel members. The panel has read and accepts those findings and conclusions."
