Once Chet retrieve my e drive, you will be able to print a copy of my ballistics report. From memory, I think it would be of some value to talk to people in the chain of custody for the Connally fragments because of the obvious discrepancies about the size and number of the fragments. This would help in any determination of the actual number and type of projectiles fired during the assassination. I suggest talking to : The nurse present at the surgery The surgeon who actually removed the fragments if he is still alive. The law enforcement officer who transferred the fragments to the DPD. In the 4 series file, there is a file plan for NARA II's FBI Bulk documents where the FBI laboratory raw data is kept. I was able to locate the lab graphs for the paraffin casts of LHO's checks and hands, however, I was unable to find graphs for the bullet fragments. Dr. Guinn has stated that he does not have anything else from the tests he performed, he turned it all over to the FBI. However, he would be willing to speak with someone from this office about his procedures. It may also help to view carefully the clips of the outtakes regarding the handling of the rifle on the 6th floor of the depository. Chain of custody discrepancies may become apparent from those clips. I am sure Doug can assist you in identifying the individuals who handled the rifle and the shell casings. The ballistics report is labeled project.mem and project.cha and is in T:\Tammi\ballistics.
