Subject: Query

Thanks for your quick response. We are preparing a response to your specific questions. In the meantime, I wonder if I can impose on you with what I hope is an easy question. During your visit you described a process that is designed to provide a means of authenticating digital copies. As I recall, an algorithm is employed that yields a key that would apply only to the digital master and all subsequent true and authentic copies. This method would allow one to have a benchmark against which all copies could be compared. Would it be possible for you to send me a description of this process or refer me to the appropriate literature? I would like to be able to describe this capability to my Board in non-technical terms.
