Subject: This Morning's Backup Brouhaha
This morning, I went to put tape 2 of Friday's backup in the Novell server, like I do every Monday morning, but the machine was asking for tape 2 of Monday's backup. I'm a little confused; does that mean that the tape that was in the machine (which I now have labeled as Friday tape 2) is actually Monday tape 1? And if so, how would this happen, when a given day's backup is done at the end of the day? Or is this something that relates to the server switch that will never happen again and I just shouldn't worry about it? And what happened to Friday tape 2?Help?!?
