Subject: Lookup Macros

As it turns out, the auto set fields macros don't work after all. It worked when I had it look for a Church Committee document, but those are in the HSCA database, which it's been looking in all along. It won't find documents in any of the other databases that I added to the macros today (and yes, I've checked to make sure that the documents it's looking for are actually there). The zFASTTRACK view has been copied over into all of the necessary databases. I can't figure out what else we might have missed
