Subject: Re: student projects

Correct me if I am mistaken on any of the follwoing statements or if I have forgotten anything.1. The students would merely be creating RIF's on Secret Service discs, and the info would already be written out for them. 2. The handwritten RIF's are ar NARA II, so we either have to have a RIF making station at NARA II or get the handwritten RIFs to ARRB ofices to have them worked on here.3. To prep the students, all I will need to do is show them a blank RIF, give them an example of a completed RIF, get them the handwritten RIFs to use for information or as a base, and then teach them how to make RIFs using the RIF software program.

PMSubject: Student projects
Last year, the college students created a handwritten RIF for each document in the United States Secret Service Official Case File at NARA. It is open to researchers. An additional project might be for the high school students to create the electronic identification forms that can go onto the JFK Collection website (based on the information on the handwritten RIFs). You or I would need to ask Steve about the details of setting this up.
