 asciiContent-Transfer-Encoding: 7bitX-Mailer: Mozilla 2.0 (Macintosh; U; 68K)I just returned from a luncheon  
 meeting where a table mate shared thisinfo which he heard on the radio this morning.WBAP820 Radio  
 mentioned today that while moving some storage boxesaround recently, they found tapes of all the radio  
 broadcasts for theassassination weekend for both WBAP and NBC. They will be playing themlocally for the  
 next few days or weeks. (Tom, are you aware of this?)Maybe some researcher would like to follow through on  
 this and determinethe feasibility of the tapes being made available to researchers. Also,someone perhaps  
 should notify the ARRB to get dubs, as there may bepotentially interesting info in the tapes. (Joe, Deb,  
 Lisa?)Interesting technical computer tidbit from the luncheon: Speaker wasfrom INTEL, which is building giant  
 new computer chip manufacturingplant in Fort Worth. She showed a silicon disk with imprinted Pentiumchips.  
 The disk (a flawed reject which was passed around) was onlslightly larger than a CD-ROM. BUT THE DISK  
 COSTS \$40,000. When shipped,the Pentium chips are in a box about 18 inches square; shipments  
 requireincredible secrecy and security to prevent highjacking or theft sinceeach carton is worth millions; no  
 more than 2 cartons are allowed to beshipped on any one airplane, since the insurance loss would  
 begigagigantic in case of a plane crash...we are talking multi-millions.Interesting?Jack
