 Subject: Re: The Head Shot from the Front
 Attention: ARRB> EVIDENCE OF THE HEAD SHOT FROM THE FRONT>>
 Michael T. Griffith> 1996> @All Rights Reserved>> As more has been learned
 about President Kennedy's head> wounds, it has become increasingly apparent that he was> struck in the
 head by a bullet that was fired from in front of> the limousine. This, of course, contradicts the Warren>
 Commission's lone-gunman scenario that all the shots were> fired from behind, by a lone assassin. This shot
 from the front> hit the President's head in the area of the right temple and> then exited the right rear part of
 his skull, leaving a large,> orange-sized defect in the right occipital-parietal region.> (The term "right occipital-
 parietal" is another way of saying> "the right rear part of the head.") The evidence of this frontal> shot to the
 head includes the following:>> * Massive eyewitness testimony, much of it given by experienced> doctors and
 nurses who saw the body at Parkland Hospital or> during the autopsy, that there was a large hole in the right
 rear> part of Kennedy's head.>> * Eyewitness accounts of a small entry-like wound in the> President's right
 temple.>> * Eyewitness accounts of a bullet striking the area of the> right temple.>> * Expert analysis of the
 right frontal spray and explosion seen> in the Zapruder film.>> * The autopsy x-rays of the President's skull.>>
 Let us begin with the testimony concerning the large defect> in the right occipital-parietal region of President
 Kennedy's> head:>> The Large Defect> ----->> The location of the large defect is a crucial issue.
 WC> supporters claim that the large head wound, i.e., the exit wound,> was on the right side of the head--not
 in the back at all, but> strictly on the right side. They also maintain that there was> substantial damage to the
 top of the head. For the most part,> they further claim that all of the witnesses who reported seeing> a large
 defect in the right rear part of the head were simply> mistaken. This view was tenuous from the moment it
 was espoused.> With the release of the previously sealed interviews conducted by> the House Select
 Committee on Assassinations (HSCA) with the> autopsy witnesses, among other things, it is patently
 untenable.> The transcripts of these interviews show that virtually every> single autopsy witness saw the
 same large head wound described by> the medical personnel at Parkland Hospital.>> A number of the
 doctors and nurses at Parkland Hospital,> where the President was taken immediately after the shooting, got>
 a good look at his head injuries. Here is some of what they had> to say about the large defect in the back of
 the head:>> * Dr. Kemp Clark:>> . . . a bullet had gone in and out of the back of his head> causing
 external lacerations and loss of brain tissue.>> . . . a large, gaping loss of tissue . . . back of his> head . . .
