**When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data, is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may in any way be related thereto.**

**This report is made available for study upon the understanding that the Government's proprietary interests in and relating thereto shall not be impaired. In case of apparent conflict between the Government's proprietary interests and those of others, notify the Staff Judge Advocate, Air Force Systems Command, Andrews AF Base, Washington 25, DC.**

**This report is published for the exchange and stimulation of ideas; it does not necessarily express the intent or policy of any higher headquarters.**

**Qualified requesters may obtain copies of this report from DDC. Orders will be expedited if placed through the librarian or other staff member designated to request and receive documents from DDC.**

## FOREWORD

Although there are a number of bibliographies on extraterrestrial research in existence, most are limited in scope either by being slanted toward a specific area of interest or restricted to research occurring during a particular time period. The purpose of this bibliography is to provide a reference source on all extraterrestrial research pertinent to planetary exploration, scientific investigation, and base construction, and to include all known references in these and related subject areas. (Categories II, V, IX, XI, and XIII, however, include only those articles of a general or summary nature.)

To handle such a momentous task, all the listings are punched on IBM cards and are then automatically categorized, alphabetized, and printed, utilizing AFSWC's CDC 1604 Digital Computer. It is intended that this first edition provide a foundation for succeeding editions. This edition is therefore a preliminary compilation of references; it is neither complete nor specialized for any of the categories or for any particular time interval.

This bibliography contains no government contract reports; however, a classified bibliography containing such entries is now in the compilation stage, while unclassified contract reports will be included in the next edition. Further, it will be noted that no single entry appears in more than one category; this will be partially modified in the next edition.

Entries in each category are alphabetized and cross-indexed. Where more than one article appears for any one author, such are listed in order of dates published. Astia Document numbers are indicated by prefixing the letters "AD".

The author wishes to gratefully acknowledge the assistance of Betty Lou Cantrall for the many tedious hours spent in typing the final mats.

A B S T R A C T

This bibliography on extraterrestrial research is subdivided into the following categories: Astrobiology; Astronomy and Cosmology; Cratering Phenomena; Extraterrestrial Matter; Materials; Meteoritic Cratering; Moon (Atlases & Photography, Configuration, Experimental Research, Exploration and Basing Concepts, Lunar -- Earth Phenomena, Lunar Trajectories, Surface Materials, and Topographical Features); Planets; Power Systems; Space Vehicles & Probes; Tektites; and Vacuum Environmental Simulation. Each category is separately alphabetized and cross-indexed. Where more than one article appears for any one author, such are listed in order of dates published.

PUBLICATION REVIEW

This report has been reviewed and is approved.
