## PREFACE

To assist student researchers in a better understanding of the military's role in space, the US Army War College Library presents The Military in Space: A Selected Bibliography. Evolving for more than thirty years, today's military space operations include many defense missions that can most effectively be carried out from a "higher ground" position. This listing of books, documents, videorecordings, and periodicals covers various aspects of the military's use of space such as communications, weather observation, surveillance, navigation support, and space control.

This list has been tailored to include only those materials readily available in the Library collection and which have been published since 1985. For your convenience, we have added AWC library call numbers at the end of each book entry (keep in mind that call numbers vary from library to library).

For additional information, please contact the Public Services Branch, US Army War College Library, AUTOVON 242-3660 or Commercial (717) 245-3660.
