Subject: [CJIS_COMM] Crime stats for 2012

Hello

I am looking at the FBI crime stats by state for 2012 and I am wondering where the information would be located for the persons who were murdered in the Newton CT shooting Dec 2012.

When I look at the spreadsheet from the UCR from the FBI website, it shows Zero in the columns for homicide offenses, murder and Non negligent

homicide, negligent homicide and justifiable homicides.

Can you please advise me of where those victims of the Newtown shooting can be located on these reports

Thank you

Could you please assist me? I'm looking at 2012 crime data for Newtown Connecticut and I do not see evidence of the Sandy Hook shootings: <http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledataadecpdf/table-8-state-cuts/table 8 offenses known to law enforcement by connecticut by city 2012.xls#disablemobile>

Would they be in 2013 crime data?

Best,

Interesting, and thank you. Is this standard policy for just Connecticut or nation wide? In other mass shootings it seems that those deaths were reported in the crime statistics for that city/county etc.

Hello, I was doing some research for a project and happed across the FBI crime statistics for 2012 in Connecticut, specifically Newtown. It displays 0 murders that year, however the tragic shooting at Sandy Hook certainly would qualify as murders. Are mass shootings categorized as something other than "murder?"

I had called the head office with this query and was eventually redirected to this email; if I have reached you in error, could I be directed to someone to correspond with about this?

Thank you.

Subject: [CJIS_COMM] question from The Newtown Bee newspaper, Newtown, CT

b6
b7C

Good afternoon,

I work at The Newtown Bee, the newspaper of Newtown, Connecticut.

I was contacted a little while ago by a woman claiming to be a newspaper reporter out of Oklahoma, who is challenging me on what happened at Sandy Hook School on December 14, 2014. [redacted] from The Banner in Nader, Oklahoma, has sent a link to the FBI's Crime in The United States 2012 report (see below). Table 8 of the Offenses Known to Law Enforcement appears to report that there were no fatalities in Newtown, Connecticut, in 2012.

b6
b7C

I know this is wrong -- 27 people were killed at Sandy Hook Elementary School on 12/14 -- but the data on the FBI website does seem to contradict this. Can you help me understand the report? Is there something I am missing? Is the report covering the timeframe of January 1-December 31, 2012?

The calls, emails and visits from Truthers have slowed down, and I can deal with these people. But this table has caught me off guard.

Any help you could provide would be very much appreciated.

If you want to call me, I will be back in the office tomorrow morning by 8:30. Our phone number is [REDACTED]

b6
b7C

Thank you,

[REDACTED]

The Newtown Bee

Hello,
Your web site, [http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table 8 offenses known to law enforcement by connecticut by city 2012.xls#disablemobile](http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table%208%20offenses%20known%20to%20law%20enforcement%20by%20connecticut%20by%20city%202012.xls#disablemobile), shows that no deaths occurred in Newtown in 2012. What about the mass murder at the Sandy Hook Elementary School?

Kindest Regards,

Interesting, and thank you. Is this standard policy for just Connecticut or nation wide? In other mass shootings it seems that those deaths were reported in the crime statistics for that city/county etc.

Hello, I was doing some research for a project and happed across the FBI crime statistics for 2012 in Connecticut, specifically Newtown. It displays 0 murders that year, however the tragic shooting at Sandy Hook certainly would qualify as murders. Are mass shootings categorized as something other than "murder?"

I had called the head office with this query and was eventually redirected to this email; if I have reached you in error, could I be directed to someone to correspond with about this?

Thank you.

To Whom It May Concern,

There is a disturbing conspiracy theory going around that the Sandy Hook school shootings did not occur due to the fact that your 2012 crime report shows no murders in Newtown, Connecticut. Can you explain this omission?

Thank you,

Hi,

I wanted to draw your attention to the many internet comments regarding the fact that Newtown CT shows zero murders in 2012 - clearly not including the Sandy Hook victims.

From a Reddit post I understand this may be because the murders are listed at state level, not at Newtown level.

I believe it may be in FBI's interest to address this under Q&A, and potentially also under your commentary on methodology (I don't see anything there that would explain this oddity).

To Whom it may concern

The Sandy Hook shooting in Newtown CT in 2012 is apparently missing from your NIBRS table #8, incidents by cities. This has fueled conspiracy theorists, who claim the data is not there because the Sandy Hook incident never happened.

Can you explain why there are no murders listed on the NIBRS table 8 for Newtown CT in the year 2012?

Thank you.

Sincerely,

b6

To Whom it may concern

The Sandy Hook shooting in Newtown CT in 2012 is apparentlt missing from your NIBRS table #8, incidents by cities. This has fueled conspiracy theorists, who claim the data is not there because the Sandy Hook incident never happened.

Can you explain why there are no murders listed on the NIBRS table 8 for Newtown CT in the year 2012?

Thank you.

Sincerely

Q1) What type of information were you seeking from the Web publication, <i>Crime in the United States, 2012</i>>? (Check all that apply.)
Other (Please specify.)

Q1b

number of murders, newtown, ct 2012

Q2) What was the focus of the information you were seeking? (Check all that apply.)
Data by region or geographic division.

Q3) Did you find the answer to your question(s)?
No - [Skip to Q7]

Q4) Did you find the number of steps to get to that page to be acceptable?

Q5) Was the information on that page presented in a way that enabled you to easily locate what you needed?
Q5b

Q6) Did you have to print the page in order to read and understand the information on it?

Q7) Why did you not find the answer to your question?

The UCR Program collects the information, but I could not understand it.

Q8) How did you access the Web publication, <i>Crime in the United States</i>>?
Through a Web address I obtained from a press release or other document.

Q9) Once you accessed <i>Crime in the United States</i>, what was the primary method of finding the information you were seeking?
I used the data table links on the right side of the screen.

Q9b

Q10) Is this the first time you have sought information from the Web publication, <i>Crime in the United States</i>>?
Yes - [Skip to Q12.]

Q11) On average, how often do you use information from <i>Crime in the United States</i>>?
Once a year or less frequently.

Q12) How much time did you spend with the Web publication, <i>Crime in the United States</i>, today?

1-2 minutes.

Q12b

Q13) How does your experience with <i>Crime in the United States</i> compare with your experience using other Web sites or Web publications?

Neither favorable nor unfavorable.

Q14) When you used the Web publication, <i>Crime in the United States</i>, did you do so as:

Analyst/researcher.

Q15) Please provide any other comments or suggestions about innovations to <i>Crime in the United States</i> that you believe would be useful in creating an easier to use and more informative Web publication.

Why does the table show zero murders for Newtown, CT in 2012? [Sandy Hook?]

Q16) If you are asking a specific question, please include your name, e-mail address, telephone number, and mailing address so that your question or request can be processed.

I have a conspiracy nut friend who is always trying to prove that there's conspiracy as those nuts do. I can usually pretty easily debunk him, but this time I didn't see a logical reason. Why and the 2012 statistics it says Newtown Connecticut had zero murders?

http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table_8_offenses_known_to_law_enforcement_by_connecticut_by_city_2012.xls

I'm quite sure it's probably something like not a calendar year or sandyhook elementary it is actually not in Newtown or something like that. The statistics do not indicate it's not a calendar year and I try to look for the city limits of Newtown, But those reasons don't seem to be it. I know it's something simple though. If you've been help I would appreciate it so I can once again prove my crazy friend wrong:-)

Thank you, sir. Our concern with Table 8 and how that page is being disseminated showing no murders in Newtown – is with the conspiracy theorists. We decided not to report on the findings, but they'll use that to justify their attacks against Newtown families and witnesses. As I'm sure you know, the conspiracy theorists have been harassing many in that town since the week of the tragedy. They also turn on us. With the info from you, we at least can respond if they start bombarding us with questions.

In response to your follow-up query:

Data presented in Tables 8 and 10 are data provided by the city/town police department and the county sheriff's office or county police department. Data are not all crimes reported within the city/county geographical boundaries. Data reported by other agencies within city/county geographical boundaries are presented in Tables 9 and 11.

My name is [REDACTED] with WVIT-TV, NBC Connecticut News. Below is a report from the FBI website in crime stats for each town/city in Connecticut from 2012. The stats from it are being used in articles in the state for a list of safest towns and cities in the state. Newtown is listed in the top

10, but according to the FBI stats, there were no murders or homicides in that town in 2012. The Sandy Hook tragedy occurred on December 14, 2012 and 27 people were murdered. Why are those stats not included in the report?

[http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table 8 offenses known to law enforcement by connecticut by city 2012.xls](http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table%208%20offenses%20known%20to%20law%20enforcement%20by%20connecticut%20by%20city%202012.xls)

Why doesn't the 2012 stats show any murders in Newtown, CT?

Just curious.

hi,

I've just viewed your table at

http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table_8_offenses_known_to_law_enforcement_by_connecticut_by_city_2012.xls

There's a crazy internet conspiracy circulating that Newtown was staged and no one was killed. This table shows 0 murders in Newtown in 2012, the year of the incident. Is this an oversight or is there another reason.

Thanks,

Subject: [CJIS_COMM] Question about data

Hi, my brother calls himself a "conspiracy nut". He was looking through FBI data at [http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledataadecpdf/table-8-state-cuts/table 8 offenses known to law enforcement by connecticut by city 2012.xls](http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledataadecpdf/table-8-state-cuts/table%208%20offenses%20known%20to%20law%20enforcement%20by%20connecticut%20by%20city%202012.xls), which shows Connecticut crimes in 2012. But there are 0 murders in Newtown in 2012 according to this. So he surmises that this data proves that the Newtown school shooting never happened. Is this true? Help me out here.

Let me be clearer. Since this is an inquiry to a Federal agency - what is your name, department, and phone number?

Secondly, I didn't refer to table 11 as an aggregate statistical indicator. I referred to my original link - [http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table 8 offenses known to law enforcement by city 2012.xls](http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table%208%20offenses%20known%20to%20law%20enforcement%20by%20city%202012.xls)

This table - 8 - is referenced as an aggregate total - sorted by state and city. According to this link - <http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/resource-pages/about-cius/about-cius>

- all of the agencies reporting to the NIBRS (including the CT state police, since their data is broken out elsewhere as you have indicated) have their data included, which is then available in a number of different statistical sorts in the CIUS.

Is the link above - table 8 - an aggregate total of crime in the United States/2012? If not, please reference the codification showing that this table is limited in its scope to only some reporting agencies?

Thank you for your careful attention to this inquiry.

FW: [CJIS_COMM] UCR crime reports

Can you assist us with a better response that satisfies this person? We have handled this the best we know how. We know we can't provide them our names, but we have already provided the unit name, telephone number, and email address and tried to explain the tables.

To: CJIS_COMM

Subject: Re: [CJIS_COMM] UCR crime reports

b6
b7C

Let me be clearer. Since this is an inquiry to a Federal agency - what is your name, department, and phone number?

Secondly, I didn't refer to table 11 as an aggregate statistical indicator. I referred to my original link - http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table_8_offenses_known_to_law_enforcement_by_connecticut_by_city_2012.xls

This table - 8 - is referenced as an aggregate total - sorted by state and city. According to this link - <http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/resource-pages/about-cius/about-cius>

- all of the agencies reporting to the NIBRS (including the CT state police, since their data is broken out elsewhere as you have indicated) have their data included, which is then available in a number of different statistical sorts in the CIUS.

Is the link above - table 8 - an aggregate total of crime in the United States/2012? If not, please reference the codification showing that this table is limited in its scope to only some reporting agencies?

Thank you for your careful attention to this inquiry.

Subject: RE: [CJIS_COMM] UCR crime reports

The responses and links provided by the cjis_comm@leo.gov email address are from the FBI Uniform Crime Reporting Program. The phone number for the UCR Program is 304-625-4830. The numbers that were submitted by the CT State Police and represented in Table 11 are not aggregate totals for the city agencies. Since the CT State Police had jurisdiction they are the agency responsible to report the Sandy Hook school shootings.

Thanks again for your reply - as I previously requested, please identify from whom, and what department this response is from? Please also provide a phone number?

Perhaps there is a misunderstanding somewhere? The link I originally provided - http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table_8_offenses_known_to_law_enforcement_by_connecticut_by_city_2012.xls - is the aggregate (total, sum, etc.) of the ALL reported offenses by ALL LAW ENFORCEMENT (city, state, federal, etc.), sorted in this case by state and city. Any subset of this data (your link to CT state police reporting offenses under their jurisdiction) is already included in this aggregate link (my original above).

The link you provided (CT state police reporting offenses) does not indicate the location of the offenses, only a total for the whole state.

Succinctly, why does this original link's data sort report not reflect the 27 murders in Newtown, CT - Sandy Hook? Thanks for your careful attention to this inquiry.

Thanks for your reply - would you please identify from whom, and what department this response is from?

The information below doesn't appear to be logical. I linked the overall crime statistics reported, which includes ALL law enforcement agencies (Connecticut - Offenses Known to Law Enforcement - by City, 2012). This is the overall data sorted, in this case, by city. You have linked a subset of this data (Offenses Known to Law Enforcement - sorted by "State, Tribal, and Other Agencies, 2012), that is just a sum apparently, of all the "offenses" for ALL the cities in Connecticut - reported by the Connecticut State Police. There is no definition of where these 36 "Murder and nonnegligent manslaughter" offenses occurred. What data did you refer to that indicates a portion of this number includes the Newtown statistics?

If the Newtown murders were handled and reported by the "Connecticut State Police", and occurred in "Newtown", then they would be listed on the data set sort for Newtown (my link provided). In fact, they are not. Please inform why this is reported this way? Thank you.

Subject: [CJIS_COMM] CIUS data question

I've seen a lot of discussion about the fact that the FBI is reporting that Newtown, CT had 0 murders in 2012, which I do see on your "By City Agency" data page. However, I know Sandy Hook is a village within Newtown. Is Sandy Hook's data included with Newtown's on this report? If so, were the school shootings classified as something other than murders/homicides? If not, where is Sandy Hook's data? Just wondering how that data is presented.

Thanks,

Why doesn't the 2012 crime known by law enforcement list the Newtown school shooting? It says NO murders were committed in Newtown CT in 2012.

To whom it may concern,

Hello, I am an OST in the Indianapolis Field office. We have a publicly available email account for receiving complaints and tips from the public. A few weeks ago, we received a complaint email from a citizen pointing out that the statistics on the FBI's webpage show there were no murders in Newtown, Connecticut, in 2012. The citizen requested that we confirm that there were no murders in Newtown in 2012. [redacted]
[redacted] They provided links to the statistics in question, and I noted that there are no murders listed for Newtown Connecticut for 2012 in the UCR statistics.

Initially I left a voicemail on a CJIS phone number concerning this. Someone got back in touch with me yesterday and suggested I email you all. I wasn't able to track down the original email, but below is a link to the page they originally referenced as well as a link to an article about the massacre in the New York Times.

http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table_8_offenses_known_to_law_enforcement_by_connecticut_by_city_2012.xls
http://www.nytimes.com/2012/12/16/nyregion/gunman-kills-20-children-at-school-in-connecticut-28-dead-in-all.html?_r=0

I understand that the statistics are provided voluntarily and that we cannot guarantee that the statistics are accurate. When people ask that is what I tell them. Thanks!

Q1) What type of information were you seeking from the Web publication, <i>Crime in the United States, 2012</i>? (Check all that apply.)
Other (Please specify.)

Q1b
number of deaths reported in connecticut because of Sandy Hook Elementary

Q2) What was the focus of the information you were seeking? (Check all that apply.)
Data by region or geographic division.

Q3) Did you find the answer to your question(s)?
Yes

Q4) Did you find the number of steps to get to that page to be acceptable?
Somewhat unacceptable.

Q5) Was the information on that page presented in a way that enabled you to easily locate what you needed?
Yes

Q5b
Q6) Did you have to print the page in order to read and understand the information on it?
No - [Skip to Q8.]

Q7) Why did you not find the answer to your question?

Q8) How did you access the Web publication, <i>Crime in the United States</i>?
Through a search engine such as Google or Yahoo!.

Q9) Once you accessed <i>Crime in the United States</i>, what was the primary method of finding the information you were seeking?
Other (Please specify.)

Q9b
i googled and found a link to connecticut deaths

Q10) Is this the first time you have sought information from the Web publication, <i>Crime in the United States</i>?

Q11) On average, how often do you use information from <i>Crime in the United States</i>?
Once a year or less frequently.

Q12) How much time did you spend with the Web publication, <i>Crime in the United States</i>, today?
6-10 minutes.

Q12b
Q13) How does your experience with <i>Crime in the United States</i> compare with your experience using other Web sites or Web publications?

Q14) When you used the Web publication, <i>Crime in the United States</i>, did you do so as:

Private citizen.

Q15) Please provide any other comments or suggestions about innovations to <i>Crime in the United States</i> that you believe would be useful in creating an easier to use and more informative Web publication.

Q16) If you are asking a specific question, please include your name, e-mail address, telephone number, and mailing address so that your question or request can be processed.

I have a conspiracy nut friend who is always trying to prove that there's conspiracy as those nuts do. I can usually pretty easily debunk him, but this time I didn't see a logical reason. Why and the 2012 statistics it says Newtown Connecticut had zero murders?

[http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table 8 offenses known to law enforcement by connecticut by city 2012.xls](http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table%208%20offenses%20known%20to%20law%20enforcement%20by%20connecticut%20by%20city%202012.xls)

I'm quite sure it's probably something like not a calendar year or sandyhook elementary it is actually not in Newtown or something like that. The statistics do not indicate it's not a calendar year and I try to look for the city limits of Newtown, But those reasons don't seem to be it. I know it's something simple though. If you've been help I would appreciate it so I can once again prove my crazy friend wrong:-)

10:38am

I called Connecticut State Police and spoke with [redacted] regarding the Connecticut State Police shootings (aka Sandy Hook). I asked [redacted] if she was aware that the press was questioning the homicide numbers and she said that she had been contacted by the press and she told them that she did not know why we did not have the homicides.

b6
b7C

I explained to [redacted] that we had reviewed their NIBRS submissions and a Delete Record was received from the Connecticut State Police [redacted] for incident 1200704559. This Delete Record was a stand alone record - it was not followed by an I (Initial Submission) therefore, they had not tried to adjust, modify, and/or correct the record. However, a Window Record (outside the two year data base) was received for the same incident January 2014. This Window Record was not accepted because there was not an incident in the database to reference because it had been previously deleted.

b6
b7C
b7E

[redacted] asked about our putting the incident back into the database. I informed her that I would talk to my managers and inquire if this was an option. In the meantime, I suggested that [redacted] check the State Police files and see if she could determine what the agency was attempting to do to the incident in January. [redacted] said she would research and see what she could find out and she also thanked me for letting her know our findings.

Thank you, sir. Our concern with Table 8 and how that page is being disseminated showing no murders in Newtown – is with the conspiracy theorists. We decided not to report on the findings, but they'll use that to justify their attacks against Newtown families and witnesses. As I'm sure you know, the conspiracy theorists have been harassing many in that town since the week of the tragedy. They also turn on us. With the info from you, we atleast can respond if they start bombarding us with questions.

In response to your follow-up query:
Data presented in Tables 8 and 10 are data provided by the city/town police department and the county sheriff's office or county police department. Data are not all crimes reported within the city/county geographical boundaries. Data reported by other agencies within city/county geographical boundaries are presented in

Tables 9 and 11.

Subject: FW: [CJIS_COMM] UCR crime reports

Can you assist us with a better response that satisfies this person? We have handled this the best we know how. We know we can't provide them our names, but we have already provided the unit name, telephone number, and email address and tried to explain the tables.

b7C

Let me be clearer. Since this is an inquiry to a Federal agency - what is your name, department, and phone number?

Secondly, I didn't refer to table 11 as an aggregate statistical indicator.

I referred to my original link -

[http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.](http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table_8_offenses_known_to_law_enforcement_by_connecticut_by_city_2012.xls)

[-2012/tables/8tabledatadecpdf/table-8-state-cuts/table_8_offenses_known_to_law_enforcement_by_connecticut_by_city_2012.xls](http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-state-cuts/table_8_offenses_known_to_law_enforcement_by_connecticut_by_city_2012.xls)

This table - 8 - is referenced as an aggregate total - sorted by state and city. According to this link - [http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.](http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/resource-pages/about-cius/about-cius)

[-2012/resource-pages/about-cius/about-cius](http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/resource-pages/about-cius/about-cius)

- all of the agencies reporting to the NIBRS (including the CT state police, since their data is broken out elsewhere as you have indicated) have their data included, which is then available in a number of different statistical sorts in the CIUS.

Is the link above - table 8 - an aggregate total of crime in the United States/2012? If not, please reference the codification showing that this table is limited in its scope to only some reporting agencies?

Thank you for your careful attention to this inquiry.

Uniform Crime Reporting Program
Crime Statistics Management Unit
Criminal Justice Information Services Division
Federal Bureau of Investigation
304-625-2000

(Employee names are not given in this venue.)

This table (Table 8) provides the volume of violent crime (murder and nonnegligent manslaughter, forcible rape, robbery, and aggravated assault) and property crime (burglary, larceny-theft, and motor vehicle theft) as reported by city and town law enforcement agencies (listed alphabetically by state) that contributed data to the UCR Program. Table 8 is not an aggregate total sorted by state and city, Table 8 is the data reported by city and town police departments within a given state. Table 11 is not a subset of Table 8. County police departments and sheriff's offices data are displayed in Table 10, state and other agencies' data are presented in Table 11. Connecticut State Police data are not represented in Table 8 or Table 10. Connecticut State Police report one aggregated total for the state as presented in Table 11. Please see the Table 8 data declaration: <http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/8tabledatadecpdf/table-8-data-declaration>.

Subject: Statement on Sandy Hook

Thought I sent this yesterday but can't find it, also bringing you a paper copy

The purpose of establishing appropriate jurisdiction is to depict the nature and amount of crime in a particular community. As a rule, cities having a police department report their own crime data. In some localities, the sheriff, state police, or a federal law enforcement agency will assist a local police department in the investigation of crimes committed within the limits of the city. When two or more local, county, state, tribal, or federal law enforcement agencies are involved in the investigation of the same offense, the agency with investigative jurisdiction based on local, county, state, tribal, and federal law and/or applicable interagency agreements or memorandums of understanding should report the offense. If there is uncertainty as to the lead or primary agency, the agencies must agree on which agency should report the offense.

The Sandy Hook Elementary School-shootings in Newtown, Connecticut were reported by the Connecticut State Police. The data can be found in table 11 of the *Crime in the United States, 2012* by visiting our publication at <http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012> and in the *National Incident-Based Reporting System, 2012* publication at <http://www.fbi.gov/about-us/cjis/ucr/nibrs/2012>.

Subject: [CJIS_COMM] Feedback for CIUS 2012 Form Submission

Q1) What type of information were you seeking from the Web publication, <i>Crime in the United States, 2012</i>? (Check all that apply.)

I was looking for the number of crimes reported.

Q1b

Q2) What was the focus of the information you were seeking? (Check all that apply.)

Data by region or geographic division.

Q3) Did you find the answer to your question(s)?

No - [Skip to Q7]

Q4) Did you find the number of steps to get to that page to be acceptable?

Q5) Was the information on that page presented in a way that enabled you to easily locate what you needed?

Q5b

Q6) Did you have to print the page in order to read and understand the information on it?

Q7) Why did you not find the answer to your question?

I am not sure if the UCR Program collects the information I need.

Q8) How did you access the Web publication, <i>Crime in the United States</i>?

Through a search engine such as Google or Yahoo!.

Q9) Once you accessed <i>Crime in the United States</i>, what was the primary method of finding the information you were seeking?

I used the data table links on the right side of the screen.

Q9b

Q10) Is this the first time you have sought information from the Web publication, <i>Crime in the United States</i>?

No

Q11) On average, how often do you use information from <i>Crime in the United States</i>?

A few times a year.

Q12) How much time did you spend with the Web publication, <i>Crime in the United States</i>, today?

16-30 minutes.

Q12b

Q13) How does your experience with <i>Crime in the United States</i> compare with your experience using other Web sites or Web publications?

Somewhat unfavorable.

Q14) When you used the Web publication, <i>Crime in the United States</i>, did you do so as:

Analyst/researcher.

Q15) Please provide any other comments or suggestions about innovations to <i>Crime in the United States</i> that you believe would be useful in creating an easier to use and more informative Web publication.

I naively looked under Newtown, CT in Table 8, expecting to see data that would include the school shootings there, but zero murders were reported. I called FBI HQ, who referred me to CJIS/UCR in Virginia, who told me that those shootings were handled by the State Police, and so were not included in the UCR tables, but could be found under "State Police". Continuing to search, I found Table 11, where (I guess) the 20 victims of Newtown were included in the 36 murders (state-wide, I guess) reported by the State Police.

Table 8 is being circulated on the Web with the Newtown, CT line highlighted to claim that the Newtown shootings are a hoax -- after all, here are the official FBI statistics for "Crime in the United States", and Newtown comes up with zero murders. You need to state prominently that "Crime in the United States" really means "Some Crime in the United States", not "All Crime in the United States" to avoid misuse of what should be a credible source. Or, better yet, do a better job of aggregating crime from all sources into one table (or set of tables) which could correctly be called "Crime in the United States". Even then, a disclaimer that the FBI might not know of ALL crimes should be given, but there's no excuse for not knowing about infamous crimes such as Newtown and tabulating them where a casual reader might expect.

Q16) If you are asking a specific question, please include your name, e-mail address, telephone number, and mailing address so that your question or request can be processed.

My name is [Redacted] in South Bend, IN on News/Talk 95.3 MNC (Michiana's News Channel). The FBI's National Press Office gave me your contact information directly.

As I'm sure you are aware, the conspiracy theorists are out there using the FBI's murder statistics for Newtown, CT in 2012 to say that the event never happened. While there has always been a small pocket conspiracy theorists who believed the Newtown massacre didn't happen, and was a government plot, the FBI's website showing no murders for Newtown in 2012 have given their theory new life.

From my understanding, the Connecticut UCR does mention the Newtown massacre several times, and highlights the areas where the murders were and were not included in the statistics. However, if I say that, it will carry less weight than if a legitimate representative from the FBI explains the discrepancy.

I was hoping to either get an interview on the air with you for a few minutes to explain this, or at the very least get an official statement I can read on the air, and post to our websites for the audience.

I've seen countless conspiracy theories come and go. Most are baseless in their nature, but I assure you, this one has legs unless it is addressed. Some very reasonable people I know have started to believe the conspiracy as a result of this. I think it would do the public some good to squash it.

Thank you in advance for your consideration. All the best to you and yours.

b7C

Yesterday, we provided this documentation to individuals that were questioning this.

The Sandy Hook shootings were all reported under CT State Police and not Newtown, CT. They can be found in the Uniform Crime Report - Crime in the United States 2012 by visiting our publication at http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/tables/11tabledatadecpdf/table-11-state-cuts/table_11_offenses_known_to_law_enforcement_by_connecticut_by_state_tribal_and_other_agencies_2012.xls (Table 11, in Crime in the United States at www.fbi.gov) and it can also be found in the NIBRS publication at www.fbi.gov, stats and services, UCR, NIBRS 2012, data tables, CT, excel, scroll to the bottom of Offense Type Table by Agency 2012.

Subject: [CJIS_COMM] question from The Newtown Bee newspaper, Newtown, CT

b6
b7C

Good afternoon,

I work at The Newtown Bee, the newspaper of Newtown, Connecticut.

I was contacted a little while ago by a woman claiming to be a newspaper reporter out of Oklahoma, who is challenging me on what happened at Sandy Hook School on December 14, 2014. [redacted] from The Banner in Nadir, Oklahoma, has sent a link to the FBI's Crime in The United States 2012 report (see below). Table 8 of the Offenses Known to Law Enforcement appears to report that there were no fatalities in Newtown, Connecticut, in 2012.

b6
b7C

I know this is wrong -- 27 people were killed at Sandy Hook Elementary School on 12/14 -- but the data on the FBI website does seem to contradict this. Can you help me understand the report? Is there something I am missing? Is the report covering the timeframe of January 1-December 31, 2012?

The calls, emails and visits from Truthers have slowed down, and I can deal with these people. But this table has caught me off guard.

Any help you could provide would be very much appreciated.

If you want to call me, I will be back in the office tomorrow morning by 8:30. Our phone number is [REDACTED]

Thank you,

[REDACTED]

The Newtown Bee

b6
b7C

Interesting, and thank you. Is this standard policy for just Connecticut or nation wide? In other mass shootings it seems that those deaths were reported in the crime statistics for that city/county etc.

b6
b7C

Hello, I was doing some research for a project and happened across the FBI crime statistics for 2012 in Connecticut, specifically Newtown. It displays 0 murders that year, however the tragic shooting at Sandy Hook certainly would qualify as murders. Are mass shootings categorized as something other than "murder?"

I had called the head office with this query and was eventually redirected to this email; if I have reached you in error, could I be directed to someone to correspond with about this?

Thank you.

Q1) What type of information were you seeking from the Web publication, <i>Crime in the United States, 2012</i>? (Check all that apply.)
Other (Please specify.)

Q1b
murders reported in Newtown CT

Q2) What was the focus of the information you were seeking? (Check all that apply.)
Data by region or geographic division.

Q3) Did you find the answer to your question(s)?
Yes

Q4) Did you find the number of steps to get to that page to be acceptable?
Neither acceptable nor unacceptable.

Q5) Was the information on that page presented in a way that enabled you to easily locate what you needed?
No - Why? (Please specify.)

Q5b
Was trying to locate the number of murders committed in Newtown Ct in 2012. the number was set to 0 even though i remember seeing in the news that 20 kids and 6 adults were gun down in a school.

Q6) Did you have to print the page in order to read and understand the information on it?
No - [Skip to Q8.]

Q7) Why did you not find the answer to your question?

Q8) How did you access the Web publication, <i>Crime in the United States</i>?
Through a Web address I obtained from a press release or other document.

Q9) Once you accessed <i>Crime in the United States</i>, what was the primary method of finding the information you were seeking?
Other (Please specify.)

Q9b
used a link from an alternate web page that took me directly to the page i wanted to view.

Q10) Is this the first time you have sought information from the Web publication, <i>Crime in the United States</i>?
Yes - [Skip to Q12.]

Q11) On average, how often do you use information from <i>Crime in the United States</i>?

Q12) How much time did you spend with the Web publication, <i>Crime in the United States</i>, today?
1-2 minutes.

Q12b

Q13) How does your experience with <i>Crime in the United States</i> compare with your experience using other Web sites or Web publications?

Neither favorable nor unfavorable.

Q14) When you used the Web publication, <i>Crime in the United States</i>, did you do so as:

Private citizen.

Q15) Please provide any other comments or suggestions about innovations to <i>Crime in the United States</i> that you believe would be useful in creating an easier to use and more informative Web publication.

Were 20 children and 6 teachers killed in Sandy Hook Elementary School in Newtown CT, or not?

Q16) If you are asking a specific question, please include your name, e-mail address, telephone number, and mailing address so that your question or request can be processed.

Q15) Please provide any other comments or suggestions about innovations to <i>Crime in the United States</i> that you believe would be useful in creating an easier to use and more informative Web publication.

In 2012, in Newtown Connecticut, there were 20+ people murdered at Sandy Hook Elementary school. The 2012 report for connecticut does not show any murders in Newtown. This needs to be fixed, as this was one of the nations single most horrific crime, yet your stats don't show it.

Q16) If you are asking a specific question, please include your name, e-mail address, telephone number, and mailing address so that your question or request can be processed.

please respond to I'd be interested in seeing the stats fixed for the record, and for the families who lost their children and teachers.

To Whom it may concern

The Sandy Hook shooting in Newtown CT in 2012 is apparentl missing from your NIBRS table #8, incidents by cities. This has fueled conspiracy theorists, who claim the data is not there because the Sandy Hook incident never happened.

Can you explain why there are no murders listed on the NIBRS table 8 for Newtown CT in the year 2012?

Thank you.

Sincerely

b6
b7C

To Whom it may concern

The Sandy Hook shooting in Newtown CT in 2012 is apparentl missing from your NIBRS table #8, incidents by cities. This has fueled conspiracy theorists, who claim the data is not there because the Sandy Hook incident never happened.

Can you explain why there are no murders listed on the NIBRS table 8 for Newtown CT in the year 2012?

Thank you.

Sincerely

[Redacted]

Q1) What type of information were you seeking from the Web publication, <i>Crime in the United States, 2012</i>? (Check all that apply.)
Other (Please specify.)

Q1b
Shooting Murders in Newton CT

Q2) What was the focus of the information you were seeking? (Check all that apply.)

Q3) Did you find the answer to your question(s)?

No - [Skip to Q7]

Q4) Did you find the number of steps to get to that page to be acceptable?

Completely acceptable.

Q5) Was the information on that page presented in a way that enabled you to easily locate what you needed?

Yes

Q5b

Q6) Did you have to print the page in order to read and understand the information on it?

No - [Skip to Q8.]

Q7) Why did you not find the answer to your question?

Q8) How did you access the Web publication, <i>Crime in the United States</i>?

Through a Web address I obtained from a press release or other document.

Q9) Once you accessed <i>Crime in the United States</i>, what was the primary method of finding the information you were seeking?

Q9b

Q10) Is this the first time you have sought information from the Web publication, <i>Crime in the United States</i>?

Yes - [Skip to Q12.]

Q11) On average, how often do you use information from <i>Crime in the United States</i>?

Once a year or less frequently.

Q12) How much time did you spend with the Web publication, <i>Crime in the United States</i>, today?

11-15 minutes.

Q12b

Q13) How does your experience with <i>Crime in the United States</i> compare with your experience using other Web sites or Web publications?

Neither favorable nor unfavorable.

Q14) When you used the Web publication, <i>Crime in the United States</i>, did you do so as:

Analyst/researcher.

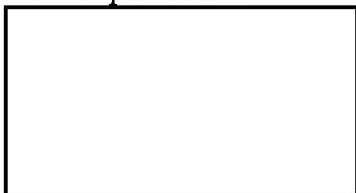

Q15) Please provide any other comments or suggestions about innovations to <i>Crime in the United States</i> that you believe would be useful in creating an easier to use and more informative Web publication.

Table 8 for the state of CT shows 0 murders in Newton in 2012.

Why is Sandy Hook not included in the data?

PS this table is going viral on the internet as evidence that Sandy Hook never happened.

Q16) If you are asking a specific question, please include your name, e-mail address, telephone number, and mailing address so that your question or request can be processed.

The FBI UCR Program has two collection systems the Summary Reporting System (SRS) and the National Incident-Based Reporting System (NIBRS). The SRS divides offenses into two groups, Part I and Part II crimes. The SRS reporting is also governed by the Hierarchy Rule. In cases where more than one offense occurs in an incident, only the highest ranking Part I offense is counted. Three offenses, Arson, Human Trafficking-Commercial Sex Acts, and Human Trafficking-Involuntary Servitude, ignore the Hierarchy Rule and are always counted even in cases when multiple offenses occur in an incident. The Hierarchy Rule requires counting only the highest offense and ignoring all others. The Hierarchy Rule applies only to crime reporting and does not affect the number of charges. Therefore, in SRS, an incident involving both a murder and an assault only the murder would be reported.

The NIBRS is an incident-based reporting system in which agencies collect data on each single crime occurrence. The NIBRS collects data on each single incident and arrest within 23 offense categories made up of 49 specific crimes called Group A offenses. By design, LEAs generate NIBRS data as a by-product of their respective records management systems (RMS). The hierarchy rule does not apply in NIBRS.

The FBI UCR Program does not delineate active shooter, mass murder, etc. Aggregate homicide data are captured on the Monthly Return of Offenses Known to Police form in the SRS, which is required to participate in the FBI UCR Program. To report data regarding the circumstances during a homicide in the SRS, agencies submit the Supplementary Homicide Report (SHR). The SHR provides additional details surrounding the homicide such as victim and offender age, sex, and race and type of weapon and is not required for participation in the program.

If a victim is shot but does not die, those cases would be reported as aggravated assault with a firearm in both the SRS and NIBRS.

In FBI murder data, mass killings often go missing

Meghan Hoyer, USA TODAY 11:51 p.m. EDT September 10, 2014

(Photo: AP/Western Connecticut State University)

Story Highlights

The FBI's Supplemental Homicide Data includes information on more than 13,000 murders in the U.S. in 2012

121 CONNECT 50 TWEETLINKEDIN 21 COMMENTEMAILMORE

When 26 teachers, students and administrators were shot to death at Sandy Hook Elementary School, it made national news for weeks. But there was one place 2012's largest mass killing was never mentioned: the FBI database that tracks all U.S. homicides.

And that isn't the only major case missing. The 12 people who were killed in an Aurora, Colo., movie watching the premier of a Batman movie aren't listed either, raising questions about the accuracy and usefulness of the federal data.

USA TODAY

Parents who do the unthinkable — kill their children

Information on more than 13,000 murders from 2012 is in the FBI's supplemental homicide data, which was released earlier this year. The data provides researchers and policymakers the age, race and sex of victims and offenders, the types of weapons used, the circumstances behind a killing and the relationship between killer and victim — information used to craft weapons laws, define the severity of gang killings and research issues such as domestic violence.

A USA TODAY investigation into mass killings has found that the FBI's homicide data over the past decade has only a 57% accuracy rate when it comes to recording the killings of more than four people in a single event. That takes into account cases that aren't there, such as Sandy Hook, and cases that are recorded as mass killings but shouldn't be, such as the July 2012 fatal shooting of a 14-year-old Cleveland girl at a birthday party, erroneously entered as a slaying with four teen-age victims.

USATODAY

Interactive: Mass Killings Since 2006

The records are voluntarily submitted by police agencies, and FBI officials say the Connecticut State Police and Aurora police departments initially provided the information on the year's two largest killing incidents – only to request that it be deleted.

In Aurora, Sgt. Chris Amsler says his department provides data to the Colorado Bureau of Investigations monthly. The FBI database contains information on 18 other homicides in Aurora in 2012.

"We checked our records and found that all data related to the theater shooting was submitted," he said, adding that investigators were still trying to figure out why the incident was later deleted from FBI records.

Connecticut's homicide count is correct, but the FBI's detailed supplementary material includes only the shooting of Adam Lanza's mother at her home in December 2012, just before Lanza went to the elementary school. Lt. Paul Vance says his department submitted a six-page report on the Newtown school victims to the FBI but later identified a mistake. Updated data was provided too late to be reflected in the database, Vance says, but the information should be added soon.

Missing information in the homicide data isn't unusual. The entire state of Florida, for instance, does not submit data to the FBI. And for many years, Nebraska and Washington, D.C., didn't either. But the 57% accuracy rate is based on dozens of cases between 2006 and 2012 that were not reported to the FBI, which USA TODAY found through other records. It also includes erroneous FBI data based on coding errors. Nationally, there are about two dozen mass killings every year.

Criminologist James Alan Fox said his research has found that roughly 90% of homicides are captured through the data, although many more cases are missing pieces of information, such as suspect and relationship details. He has devised a statistical method that accounts for both missing cases and missing information, to give researchers the ability to look at the full scope of the problem. Mass killings are rare among homicides, and missing such data is especially troublesome in such a small subset.

"We can still look at trends and recognize that they are not infallible but they are pretty good," says Fox, a Northeastern University professor and a member of the USA TODAY board of contributors.

Still, Fox says, the loss of major cases was a concern. "I'd certainly hope somebody would ask why" the mass killings weren't included, he says.

The FBI's data system is notoriously old and can keep data only on up to 11 victims per incident – meaning other large-scale mass killings, such as the Virginia Tech shooting in 2007, had to be broken up over several records. The agency hopes to have a new computer system running by the end of the year, FBI spokesman Stephen G. Fischer Jr. said. That system will keep detailed homicide data in nearly real time, eliminating the current 15-month lag in releasing details of crimes to researchers and policy makers.

In FBI murder data, mass killings often go missing

Meghan Hoyer, USA TODAY 11:51 p.m. EDT September 10, 2014

(Photo: AP/Western Connecticut State University)

Story Highlights

The FBI's Supplemental Homicide Data includes information on more than 13,000 murders in the U.S. in 2012

121 CONNECT 50 TWEETLINKEDIN 21 COMMENTEMAILMORE

When 26 teachers, students and administrators were shot to death at Sandy Hook Elementary School, it made national news for weeks. But there was one place 2012's largest mass killing was never mentioned: the FBI database that tracks all U.S. homicides.

And that isn't the only major case missing. The 12 people who were killed in an Aurora, Colo., movie watching the premier of a Batman movie aren't listed either, raising questions about the accuracy and usefulness of the federal data.

USA TODAY

Parents who do the unthinkable -- kill their children

Information on more than 13,000 murders from 2012 is in the FBI's supplemental homicide data, which was released earlier this year. The data provides researchers and policymakers the age, race and sex of victims and offenders, the types of weapons used, the circumstances behind a killing and the relationship between killer and victim -- information used to craft weapons laws, define the severity of gang killings and research issues such as domestic violence.

A USA TODAY investigation into mass killings has found that the FBI's homicide data over the past decade has only a 57% accuracy rate when it comes to recording the killings of more than four people in a single event. That takes into account cases that aren't there, such as Sandy Hook, and cases that are recorded as mass killings but shouldn't be, such as the July 2012 fatal shooting of a 14-year-old Cleveland girl at a birthday party, erroneously entered as a slaying with four teen-age victims.

USATODAY

Interactive: Mass Killings Since 2006

The records are voluntarily submitted by police agencies, and FBI officials say the Connecticut State Police and Aurora police departments initially provided the information on the year's two largest killing incidents – only to request that it be deleted.

In Aurora, Sgt. Chris Amsler says his department provides data to the Colorado Bureau of Investigations monthly. The FBI database contains information on 18 other homicides in Aurora in 2012.

"We checked our records and found that all data related to the theater shooting was submitted," he said, adding that investigators were still trying to figure out why the incident was later deleted from FBI records.

Connecticut's homicide count is correct, but the FBI's detailed supplementary material includes only the shooting of Adam Lanza's mother at her home in December 2012, just before Lanza went to the elementary school. Lt. Paul Vance says his department submitted a six-page report on the Newtown school victims to the FBI but later identified a mistake. Updated data was provided too late to be reflected in the database, Vance says, but the information should be added soon.

Missing information in the homicide data isn't unusual. The entire state of Florida, for instance, does not submit data to the FBI. And for many years, Nebraska and Washington, D.C., didn't either. But the 57% accuracy rate is based on dozens of cases between 2006 and 2012 that were not reported to the FBI, which USA TODAY found through other records. It also includes erroneous FBI data based on coding errors. Nationally, there are about two dozen mass killings every year.

Criminologist James Alan Fox said his research has found that roughly 90% of homicides are captured through the data, although many more cases are missing pieces of information, such as suspect and relationship details. He has devised a statistical method that accounts for both missing cases and missing information, to give researchers the ability to look at the full scope of the problem. Mass killings are rare among homicides, and missing such data is especially troublesome in such a small subset.

"We can still look at trends and recognize that they are not infallible but they are pretty good," says Fox, a Northeastern University professor and a member of the USA TODAY board of contributors.

Still, Fox says, the loss of major cases was a concern. "I'd certainly hope somebody would ask why" the mass killings weren't included, he says.

The FBI's data system is notoriously old and can keep data only on up to 11 victims per incident – meaning other large-scale mass killings, such as the Virginia Tech shooting in 2007, had to be broken up over several records. The agency hopes to have a new computer system running by the end of the year, FBI spokesman Stephen G. Fischer Jr. said. That system will keep detailed homicide data in nearly real time, eliminating the current 15-month lag in releasing details of crimes to researchers and policy makers.

The FBI UCR Program has two collection systems the Summary Reporting System (SRS) and the National Incident-Based Reporting System (NIBRS). The SRS divides offenses into two groups, Part I and Part II crimes. The SRS reporting is also governed by the Hierarchy Rule. In cases where more than one offense occurs in an incident, only the highest ranking Part I offense is counted. Three offenses, Arson, Human Trafficking–Commercial Sex Acts, and Human Trafficking–Involuntary Servitude, ignore the Hierarchy Rule and are always counted even in cases when multiple offenses occur in an incident. The Hierarchy Rule requires counting only the highest offense and ignoring all others. The Hierarchy Rule applies only to crime reporting and does not affect the number of charges. Therefore, in SRS, an incident involving both a murder and an assault only the murder would be reported.

The NIBRS is an incident-based reporting system in which agencies collect data on each single crime occurrence. The NIBRS collects data on each single incident and arrest within 23 offense categories made up of 49 specific crimes called Group A offenses. By design, LEAs generate NIBRS data as a by-product of their respective records management systems (RMS). The hierarchy rule does not apply in NIBRS.

The FBI UCR Program does not delineate active shooter, mass murder, etc. Aggregate homicide data are captured on the Monthly Return of Offenses Known to Police form in the SRS, which is required to participate in the FBI UCR Program. To report data regarding the circumstances during a homicide in the SRS, agencies submit the Supplementary Homicide Report (SHR). The SHR provides additional details surrounding the homicide such as victim and offender age, sex, and race and type of weapon and is not required for participation in the program.

If a victim is shot but does not die, those cases would be reported as aggravated assault with a firearm in both the SRS and NIBRS.

Story Highlights

The FBI's Supplemental Homicide Data includes information on more than 13,000 murders in the U.S. in 2012

121 CONNECT 50 TWEETLINKEDIN 21 COMMENTEMAILMORE

When 26 teachers, students and administrators were shot to death at Sandy Hook Elementary School, it made national news for weeks. But there was one place 2012's largest mass killing was never mentioned: the FBI database that tracks all U.S. homicides.

And that isn't the only major case missing. The 12 people who were killed in an Aurora, Colo., movie watching the premier of a Batman movie aren't listed either, raising questions about the accuracy and usefulness of the federal data.

USA TODAY

Parents who do the unthinkable -- kill their children

Information on more than 13,000 murders from 2012 is in the FBI's supplemental homicide data, which was released earlier this year. The data provides researchers and policymakers the age, race and sex of victims and offenders, the types of weapons used, the circumstances behind a killing and the relationship between killer and victim – information used to craft weapons laws, define the severity of gang killings and research issues such as domestic violence.

A USA TODAY investigation into mass killings has found that the FBI's homicide data over the past decade has only a 57% accuracy rate when it comes to recording the killings of more than four people in a single event. That takes into account cases that aren't there, such as Sandy Hook, and cases that are recorded as mass killings but shouldn't be, such as the July 2012 fatal shooting of a 14-year-old Cleveland girl at a birthday party, erroneously entered as a slaying with four teen-age victims.

USATODAY

Interactive: Mass Killings Since 2006

The records are voluntarily submitted by police agencies, and FBI officials say the Connecticut State Police and Aurora police departments initially provided the information on the year's two largest killing incidents – only to request that it be deleted.

In Aurora, Sgt. Chris Amsler says his department provides data to the Colorado Bureau of Investigations monthly. The FBI database contains information on 18 other homicides in Aurora in 2012.

"We checked our records and found that all data related to the theater shooting was submitted," he said, adding that investigators were still trying to figure out why the incident was later deleted from FBI records.

Connecticut's homicide count is correct, but the FBI's detailed supplementary material includes only the shooting of Adam Lanza's mother at her home in December 2012, just before Lanza went to the elementary school. Lt. Paul Vance says his department submitted a six-page report on the Newtown school victims to the FBI but later identified a mistake. Updated data was provided too late to be reflected in the database, Vance says, but the information should be added soon.

Missing information in the homicide data isn't unusual. The entire state of Florida, for instance, does not submit data to the FBI. And for many years, Nebraska and Washington, D.C., didn't either. But the 57% accuracy rate is based on dozens of cases between 2006 and 2012 that were not reported to the FBI, which USA TODAY found through other records. It also includes erroneous FBI data based on coding errors. Nationally, there are about two dozen mass killings every year.

Criminologist James Alan Fox said his research has found that roughly 90% of homicides are captured through the data, although many more cases are missing pieces of information, such as suspect and relationship details. He has devised a statistical method that accounts for both missing cases and missing information, to give researchers the ability to look at the full scope of the problem. Mass killings are rare among homicides, and missing such data is especially troublesome in such a small subset.

"We can still look at trends and recognize that they are not infallible but they are pretty good," says Fox, a Northeastern University professor and a member of the USA TODAY board of contributors.

Still, Fox says, the loss of major cases was a concern. "I'd certainly hope somebody would ask why" the mass killings weren't included, he says.

The FBI's data system is notoriously old and can keep data only on up to 11 victims per incident – meaning other large-scale mass killings, such as the Virginia Tech shooting in 2007, had to be broken up over several records. The agency hopes to have a new computer system running by the end of the year, FBI spokesman Stephen G. Fischer Jr. said. That system will keep detailed homicide data in nearly real time, eliminating the current 15-month lag in releasing details of crimes to researchers and policy makers.

In FBI murder data, mass killings often go missing

Meghan Hoyer, USA TODAY 11:51 p.m. EDT September 10, 2014

(Photo: AP/Western Connecticut State University)

Story Highlights

The FBI's Supplemental Homicide Data includes information on more than 13,000 murders in the U.S. in 2012

121 CONNECT 50 TWEETLINKEDIN 21 COMMENTEMAILMORE

When 26 teachers, students and administrators were shot to death at Sandy Hook Elementary School, it made national news for weeks. But there was one place 2012's largest mass killing was never mentioned: the FBI database that tracks all U.S. homicides.

And that isn't the only major case missing. The 12 people who were killed in an Aurora, Colo., movie watching the premier of a Batman movie aren't listed either, raising questions about the accuracy and usefulness of the federal data.

USA TODAY

Parents who do the unthinkable -- kill their children

Information on more than 13,000 murders from 2012 is in the FBI's supplemental homicide data, which was released earlier this year. The data provides researchers and policymakers the age, race and sex of victims and offenders, the types of weapons used, the circumstances behind a killing and the relationship between killer and victim – information used to craft weapons laws, define the severity of gang killings and research issues such as domestic violence.

A USA TODAY investigation into mass killings has found that the FBI's homicide data over the past decade has only a 57% accuracy rate when it comes to recording the killings of more than four people in a single event. That takes into account cases that aren't there, such as Sandy Hook, and cases that are recorded as mass killings but shouldn't be, such as the July 2012 fatal shooting of a 14-year-old Cleveland girl at a birthday party, erroneously entered as a slaying with four teen-age victims.

USATODAY

Interactive: Mass Killings Since 2006

The records are voluntarily submitted by police agencies, and FBI officials say the Connecticut State Police and Aurora police departments initially provided the information on the year's two largest killing incidents – only to request that it be deleted.

In Aurora, Sgt. Chris Amsler says his department provides data to the Colorado Bureau of Investigations monthly. The FBI database contains information on 18 other homicides in Aurora in 2012.

"We checked our records and found that all data related to the theater shooting was submitted," he said, adding that investigators were still trying to figure out why the incident was later deleted from FBI records.

Connecticut's homicide count is correct, but the FBI's detailed supplementary material includes only the shooting of Adam Lanza's mother at her home in December 2012, just before Lanza went to the elementary school. Lt. Paul Vance says his department submitted a six-page report on the Newtown school victims to the FBI but later identified a mistake. Updated data was provided too late to be reflected in the database, Vance says, but the information should be added soon.

Missing information in the homicide data isn't unusual. The entire state of Florida, for instance, does not submit data to the FBI. And for many years, Nebraska and Washington, D.C., didn't either. But the 57% accuracy rate is based on dozens of cases between 2006 and 2012 that were not reported to the FBI, which USA TODAY found through other records. It also includes erroneous FBI data based on coding errors. Nationally, there are about two dozen mass killings every year.

Criminologist James Alan Fox said his research has found that roughly 90% of homicides are captured through the data, although many more cases are missing pieces of information, such as suspect and relationship details. He has devised a statistical method that accounts for both missing cases and missing information, to give researchers the ability to look at the full scope of the problem. Mass killings are rare among homicides, and missing such data is especially troublesome in such a small subset.

"We can still look at trends and recognize that they are not infallible but they are pretty good," says Fox, a Northeastern University professor and a member of the USA TODAY board of contributors.

Still, Fox says, the loss of major cases was a concern. "I'd certainly hope somebody would ask why" the mass killings weren't included, he says.

The FBI's data system is notoriously old and can keep data only on up to 11 victims per incident – meaning other large-scale mass killings, such as the Virginia Tech shooting in 2007, had to be broken up over several records. The agency hopes to have a new computer system running by the end of the year, FBI spokesman Stephen G. Fischer Jr. said. That system will keep detailed homicide data in nearly real time, eliminating the current 15-month lag in releasing details of crimes to researchers and policy makers.

The FBI UCR Program has two collection systems the Summary Reporting System (SRS) and the National Incident-Based Reporting System (NIBRS). The SRS divides offenses into two groups, Part I and Part II crimes. The SRS reporting is also governed by the Hierarchy Rule. In cases where more than one offense occurs in an incident, only the highest ranking Part I offense is counted. Three offenses, Arson, Human Trafficking—

Commercial Sex Acts, and Human Trafficking–Involuntary Servitude, ignore the Hierarchy Rule and are always counted even in cases when multiple offenses occur in an incident. The Hierarchy Rule requires counting only the highest offense and ignoring all others. The Hierarchy Rule applies only to crime reporting and does not affect the number of charges. Therefore, in SRS, an incident involving both a murder and an assault only the murder would be reported.

The NIBRS is an incident-based reporting system in which agencies collect data on each single crime occurrence. The NIBRS collects data on each single incident and arrest within 23 offense categories made up of 49 specific crimes called Group A offenses. By design, LEAs generate NIBRS data as a by-product of their respective records management systems (RMS). The hierarchy rule does not apply in NIBRS.

The FBI UCR Program does not delineate active shooter, mass murder, etc. Aggregate homicide data are captured on the Monthly Return of Offenses Known to Police form in the SRS, which is required to participate in the FBI UCR Program. To report data regarding the circumstances during a homicide in the SRS, agencies submit the Supplementary Homicide Report (SHR). The SHR provides additional details surrounding the homicide such as victim and offender age, sex, and race and type of weapon and is not required for participation in the program.

If a victim is shot but does not die, those cases would be reported as aggravated assault with a firearm in both the SRS and NIBRS.

When 26 teachers, students and administrators were shot to death at Sandy Hook Elementary School, it made national news for weeks. But there was one place 2012's largest mass killing was never mentioned: the FBI database that tracks all U.S. homicides.

And that isn't the only major case missing. The 12 people who were killed in an Aurora, Colo., movie watching the premier of a Batman movie aren't listed either, raising questions about the accuracy and usefulness of the federal data.

USA TODAY

Parents who do the unthinkable – kill their children

Information on more than 13,000 murders from 2012 is in the FBI's supplemental homicide data, which was released earlier this year. The data provides researchers and policymakers the age, race and sex of victims and offenders, the types of weapons used, the circumstances behind a killing and the relationship between killer and victim – information used to craft weapons laws, define the severity of gang killings and research issues such as domestic violence.

A USA TODAY investigation into mass killings has found that the FBI's homicide data over the past decade has only a 57% accuracy rate when it comes to recording the killings of more than four people in a single event. That takes into account cases that aren't there, such as Sandy Hook, and cases that are recorded as mass killings but shouldn't be, such as the July 2012 fatal shooting of a 14-year-old Cleveland girl at a birthday party, erroneously entered as a slaying with four teen-age victims.

USATODAY

Interactive: Mass Killings Since 2006

The records are voluntarily submitted by police agencies, and FBI officials say the Connecticut State Police and Aurora police departments initially provided the information on the year's two largest killing incidents – only to request that it be deleted.

In Aurora, Sgt. Chris Amsler says his department provides data to the Colorado Bureau of Investigations monthly. The FBI database contains information on 18 other homicides in Aurora in 2012.

"We checked our records and found that all data related to the theater shooting was submitted," he said, adding that investigators were still trying to figure out why the incident was later deleted from FBI records.

Connecticut's homicide count is correct, but the FBI's detailed supplementary material includes only the shooting of Adam Lanza's mother at her home in December 2012, just before Lanza went to the elementary school. Lt. Paul Vance says his department submitted a six-page report on the Newtown school victims to the FBI but later identified a mistake. Updated data was provided too late to be reflected in the database, Vance says, but the information should be added soon.

Missing information in the homicide data isn't unusual. The entire state of Florida, for instance, does not submit data to the FBI. And for many years, Nebraska and Washington, D.C., didn't either. But the 57% accuracy rate is based on dozens of cases between 2006 and 2012 that were not reported to the FBI, which USA TODAY found through other records. It also includes erroneous FBI data based on coding errors. Nationally, there are about two dozen mass killings every year.

Criminologist James Alan Fox said his research has found that roughly 90% of homicides are captured through the data, although many more cases are missing pieces of information, such as suspect and relationship details. He has devised a statistical method that accounts for both missing cases and missing information, to give researchers the ability to look at the full scope of the problem. Mass killings are rare among homicides, and missing such data is especially troublesome in such a small subset.

"We can still look at trends and recognize that they are not infallible but they are pretty good," says Fox, a Northeastern University professor and a member of the USA TODAY board of contributors.

Still, Fox says, the loss of major cases was a concern. "I'd certainly hope somebody would ask why" the mass killings weren't included, he says.

The FBI's data system is notoriously old and can keep data only on up to 11 victims per incident – meaning other large-scale mass killings, such as the Virginia Tech shooting in 2007, had to be broken up over several records. The agency hopes to have a new computer system running by the end of the year, FBI spokesman Stephen G. Fischer Jr. said. That system will keep detailed homicide data in nearly real time, eliminating the current 15-month lag in releasing details of crimes to researchers and policy makers.

In FBI murder data, mass killings often go missing

Meghan Hoyer, USA TODAY 11:51 p.m. EDT September 10, 2014

Story Highlights

The FBI's Supplemental Homicide Data includes information on more than 13,000 murders in the U.S. in 2012

121 CONNECT 50 TWEETLINKEDIN 21 COMMENTEMAILMORE

When 26 teachers, students and administrators were shot to death at Sandy Hook Elementary School, it made national news for weeks. But there was one place 2012's largest mass killing was never mentioned: the FBI database that tracks all U.S. homicides.

And that isn't the only major case missing. The 12 people who were killed in an Aurora, Colo., movie watching the premier of a Batman movie aren't listed either, raising questions about the accuracy and usefulness of the federal data.

USA TODAY

Parents who do the unthinkable -- kill their children

Information on more than 13,000 murders from 2012 is in the FBI's supplemental homicide data, which was released earlier this year. The data provides researchers and policymakers the age, race and sex of victims and offenders, the types of weapons used, the circumstances behind a killing and the relationship between killer and victim – information used to craft weapons laws, define the severity of gang killings and research issues such as domestic violence.

A USA TODAY investigation into mass killings has found that the FBI's homicide data over the past decade has only a 57% accuracy rate when it comes to recording the killings of more than four people in a single event. That takes into account cases that aren't there, such as Sandy Hook, and cases that are recorded as mass killings but shouldn't be, such as the July 2012 fatal shooting of a 14-year-old Cleveland girl at a birthday party, erroneously entered as a slaying with four teen-age victims.

Interactive: Mass Killings Since 2006

The records are voluntarily submitted by police agencies, and FBI officials say the Connecticut State Police and Aurora police departments initially provided the information on the year's two largest killing incidents – only to request that it be deleted.

In Aurora, Sgt. Chris Amsler says his department provides data to the Colorado Bureau of Investigations monthly. The FBI database contains information on 18 other homicides in Aurora in 2012.

"We checked our records and found that all data related to the theater shooting was submitted," he said, adding that investigators were still trying to figure out why the incident was later deleted from FBI records.

Connecticut's homicide count is correct, but the FBI's detailed supplementary material includes only the shooting of Adam Lanza's mother at her home in December 2012, just before Lanza went to the elementary school. Lt. Paul Vance says his department submitted a six-page report on the Newtown school victims to the FBI but later identified a mistake. Updated data was provided too late to be reflected in the database, Vance says, but the information should be added soon.

Missing information in the homicide data isn't unusual. The entire state of Florida, for instance, does not submit data to the FBI. And for many years, Nebraska and Washington, D.C., didn't either. But the 57% accuracy rate is based on dozens of cases between 2006 and 2012 that were not reported to the FBI, which USA TODAY found through other records. It also includes erroneous FBI data based on coding errors. Nationally, there are about two dozen mass killings every year.

Criminologist James Alan Fox said his research has found that roughly 90% of homicides are captured through the data, although many more cases are missing pieces of information, such as suspect and relationship details. He has devised a statistical method that accounts for both missing cases and missing information, to give researchers the ability to look at the full scope of the problem. Mass killings are rare among homicides, and missing such data is especially troublesome in such a small subset.

"We can still look at trends and recognize that they are not infallible but they are pretty good," says Fox, a Northeastern University professor and a member of the USA TODAY board of contributors.

Still, Fox says, the loss of major cases was a concern. "I'd certainly hope somebody would ask why" the mass killings weren't included, he says.

The FBI's data system is notoriously old and can keep data only on up to 11 victims per incident – meaning other large-scale mass killings, such as the Virginia Tech shooting in 2007, had to be broken up over several records. The agency hopes to have a new computer system running by the end of the year, FBI spokesman Stephen G. Fischer Jr. said. That system will keep detailed homicide data in nearly real time, eliminating the current 15-month lag in releasing details of crimes to researchers and policy makers.

Is this too wordy? Do I need to add or remove something?

The FBI UCR Program has two collection systems the Summary Reporting System (SRS) and the National Incident-Based Reporting System (NIBRS). The SRS divides offenses into two groups, Part I and Part II crimes. The SRS reporting is also governed by the Hierarchy Rule. In cases where more than one offense occurs in an incident, only the highest ranking Part I offense is counted. Three offenses, Arson, Human Trafficking—Commercial Sex Acts, and Human Trafficking—Involuntary Servitude, ignore the Hierarchy Rule and are always counted even in cases when multiple offenses occur in an incident. The Hierarchy Rule requires counting only the highest offense and ignoring all others. The Hierarchy Rule applies only to crime reporting and does not affect the number of charges. Therefore, in SRS, an incident involving both a murder and an assault only the murder would be reported.

The NIBRS is an incident-based reporting system in which agencies collect data on each single crime occurrence. The NIBRS collects data on each single incident and arrest within 23 offense categories made up of 49 specific crimes called Group A offenses. By design, LEAs generate NIBRS data as a by-product of their respective records management systems (RMS). The hierarchy rule does not apply in NIBRS.

The FBI UCR Program does not delineate active shooter, mass murder, etc. Aggregate homicide data are captured on the Monthly Return of Offenses Known to Police form in the SRS, which is required to participate in the FBI UCR Program. To report data regarding the circumstances

during a homicide in the SRS, agencies submit the Supplementary Homicide Report (SHR). The SHR provides additional details surrounding the homicide such as victim and offender age, sex, and race and type of weapon and is not required for participation in the program.

If a victim is shot but does not die, those cases would be reported as aggravated assault with a firearm in both the SRS and NIBRS.

Story Highlights

The FBI's Supplemental Homicide Data includes information on more than 13,000 murders in the U.S. in 2012

121 CONNECT 50 TWEETLINKEDIN 21 COMMENTEMAILMORE

When 26 teachers, students and administrators were shot to death at Sandy Hook Elementary School, it made national news for weeks. But there was one place 2012's largest mass killing was never mentioned: the FBI database that tracks all U.S. homicides.

And that isn't the only major case missing. The 12 people who were killed in an Aurora, Colo., movie watching the premier of a Batman movie aren't listed either, raising questions about the accuracy and usefulness of the federal data.

USA TODAY

Parents who do the unthinkable -- kill their children

Information on more than 13,000 murders from 2012 is in the FBI's supplemental homicide data, which was released earlier this year. The data provides researchers and policymakers the age, race and sex of victims and offenders, the types of weapons used, the circumstances behind a killing and the relationship between killer and victim – information used to craft weapons laws, define the severity of gang killings and research issues such as domestic violence.

A USA TODAY investigation into mass killings has found that the FBI's homicide data over the past decade has only a 57% accuracy rate when it comes to recording the killings of more than four people in a single event. That takes into account cases that aren't there, such as Sandy Hook, and cases that are recorded as mass killings but shouldn't be, such as the July 2012 fatal shooting of a 14-year-old Cleveland girl at a birthday party, erroneously entered as a slaying with four teen-age victims.

USATODAY

Interactive: Mass Killings Since 2006

The records are voluntarily submitted by police agencies, and FBI officials say the Connecticut State Police and Aurora police departments initially provided the information on the year's two largest killing incidents – only to request that it be deleted.

In Aurora, Sgt. Chris Amsler says his department provides data to the Colorado Bureau of Investigations monthly. The FBI database contains information on 18 other homicides in Aurora in 2012.

"We checked our records and found that all data related to the theater shooting was submitted," he said, adding that investigators were still trying to figure out why the incident was later deleted from FBI records.

Connecticut's homicide count is correct, but the FBI's detailed supplementary material includes only the shooting of Adam Lanza's mother at her home in December 2012, just before Lanza went to the elementary school. Lt. Paul Vance says his department submitted a six-page report on the Newtown school victims to the FBI but later identified a mistake. Updated data was provided too late to be reflected in the database, Vance says, but the information should be added soon.

Missing information in the homicide data isn't unusual. The entire state of Florida, for instance, does not submit data to the FBI. And for many years, Nebraska and Washington, D.C., didn't either. But the 57% accuracy rate is based on dozens of cases between 2006 and 2012 that were not reported to the FBI, which USA TODAY found through other records. It also includes erroneous FBI data based on coding errors. Nationally, there are about two dozen mass killings every year.

Criminologist James Alan Fox said his research has found that roughly 90% of homicides are captured through the data, although many more cases are missing pieces of information, such as suspect and relationship details. He has devised a statistical method that accounts for both missing cases and missing information, to give researchers the ability to look at the full scope of the problem. Mass killings are rare among homicides, and missing such data is especially troublesome in such a small subset.

"We can still look at trends and recognize that they are not infallible but they are pretty good," says Fox, a Northeastern University professor and a member of the USA TODAY board of contributors.

Still, Fox says, the loss of major cases was a concern. "I'd certainly hope somebody would ask why" the mass killings weren't included, he says.

The FBI's data system is notoriously old and can keep data only on up to 11 victims per incident – meaning other large-scale mass killings, such as the Virginia Tech shooting in 2007, had to be broken up over several records. The agency hopes to have a new computer system running by the end of the year, FBI spokesman Stephen G. Fischer Jr. said. That system will keep detailed homicide data in nearly real time, eliminating the current 15-month lag in releasing details of crimes to researchers and policy makers.

This has been around the block a couple of times. Both Sandy Hook and the Aurora shootings are missing from the closed masters. They were included at the time of publication. We have dug very deeply into the files. Both places are NIBRS agencies and both incidents were deleted by the agency. [redacted]

[redacted] Both agencies have been made aware.

Subject: random question about the SHR

b6
b7C

Hey

b6
b7C

A random question about the SHR data came by my desk today and I wanted to follow up with you. Someone was asking me about gun homicides in the SHR and said that they were looking at the 2012 data and were unable to find the Sandy Hook School shooting in the SHR data. I know that both the state police and the Newtown police department responded to the event and I was wondering if either of these agencies reports SHR data and, if so, why you think those homicides would be missing from the data?

I haven't had a chance to do much looking into this but I thought I would throw the question your way in case you knew about it off the top of your head.

Thanks and have a great weekend!

We are still working with the states. We have already closed the masters in January so now it's a discussion regarding adding the data. Don't know where that went to I'll have to follow up.

[REDACTED]

To submit data to the FBI UCR Program, Colorado and Connecticut agencies submit monthly crime reports, using uniform offense definitions, to a centralized repository within their state. The state UCR Program then forwards the data to the FBI's UCR Program. Agencies/states have until the end of December of the following year to submit any missing or corrected data for the previous year for the master files. The yearly master files contain all data reported to the FBI UCR Program including unpublished and corrected data.

The data for the incidents involving the Aurora theater shooting and the Sandy Hook Elementary School shooting were submitted to the FBI UCR Program prior to the deadline for publication in Crime in the United States, 2012 (CIUS). The data were processed and the aggregate totals were published in CIUS. After publication, a delete record was submitted to the FBI UCR Program for both shooting incidents from the Colorado and Connecticut state UCR Programs, respectively. Delete records were processed removing the incidents from the FBI UCR Program database. Both Aurora, Colorado and the Connecticut State Police are NIBRS participating agencies. In order to correct incident information in the NIBRS, an agency must first submit a delete record for the incident, and then the incident must be resubmitted. In both cases the incidents were not resubmitted.

Subject: Follow up on 2012 SHR

Hi [REDACTED]

b6
b7C

I'm following up on a question I asked a few months ago about why Sandy Hook and the Aurora Theater shootings were missing from the 2012 SHR data - you responded at that time that SHR is voluntary and the localities/police departments that handled those cases likely did not provide the information to the FBI.

I've checked in with both the Aurora police department and the Connecticut State Police, and the CSP is saying it did send in the supplemental information to the FBI in a six-page report. The UCR numbers bear this out - according to the UCR, the CSP handled 36 homicides in 2012. However, when you open the SHR file, it shows the CSP only handling 9 single-victim cases.

Because the SHR database has trouble dealing with incidents with more than 11 victims: is there a chance the computer system knocked these cases out? Is that possibly what occurred here? I'm trying to figure out why the two largest homicide events in 2012 aren't reflected in the SHR data, and both had more than 11 victims.

Subject: Connecticut

Importance: High

10:38am

I called Connecticut State Police and spoke with [Redacted] regarding the Connecticut State Police shootings (aka Sandy Hook). I asked [Redacted] if she was aware that the press was questioning the homicide numbers and she said that she had been contacted by the press and she told them that she did not know why we did not have the homicides.

b6
b7C

I explained to [Redacted] that we had reviewed their NIBRS submissions and a Delete Record was received from the Connecticut State Police [Redacted] for incident 1200704559. This Delete Record was a stand alone record - it was not followed by an I (Initial Submission) therefore, they had not tried to adjust, modify, and/or correct the record. However, a Window Record (outside the two year data base) was received for the same incident January 2014. This Window Record was not accepted because there was not an incident in the database to reference because it had been previously deleted.

b6
b7C
b7E

[Redacted] asked about our putting the incident back into the database. I informed her that I would talk to my managers and inquire if this was an option. In the meantime, I suggested that [Redacted] check the State Police files and see if she could determine what the agency was attempting to do to the incident in January. [Redacted] said she would research and see what she could find out and she also thanked me for letting her know our findings.

Subject: RE: Aurora - Press

To submit data to the FBI UCR Program, Colorado and Connecticut agencies submit monthly crime reports, using uniform offense definitions, to a centralized repository within their state. The state UCR Program then forwards the data to the FBI's UCR Program. Agencies/states have until the end of December of the following year to submit any missing or corrected data for the previous year for the master files. The yearly master files contain all data reported to the FBI UCR Program including unpublished and corrected data.

The data for the incidents involving the Aurora theater shooting and the Sandy Hook Elementary School shooting were submitted to the FBI UCR Program prior to the deadline for publication in *Crime in the United States, 2012* (CIUS). The data were processed and the aggregate totals were published in CIUS. After publication, a delete record was submitted to the FBI UCR Program for both shooting incidents from the Colorado and Connecticut state UCR Programs, respectively. Delete records were processed removing the incidents from the FBI UCR Program database. Both Aurora, Colorado and the Connecticut State Police are NIBRS participating agencies. In order to correct incident information in the NIBRS, an agency must first submit a delete record for the incident, and then the incident must be resubmitted. In both cases the incidents were not resubmitted.

ASAC Denver here. Sorry to hit you guys on a Friday afternoon but wondering if one of you might be able to provide us with some information. Here's the situation – the Aurora, CO (location of 2012 mass movie theater shooting during which 12 were killed) Police Chief just called to advise USA Today reached out to him to ask why the Aurora Theater homicides were not reported and, therefore, did not show up in UCR statistics. According to the reporter, USA Today is planning to run a story on the failure to report. APD verified the information was reported to the Colorado Bureau of Investigation who is almost certain (they are verifying) the information was reported to the FBI. I have to admit I'm very ignorant on this process but wondering if there is a way to verify the information CJIS received from CBI in 2012 that should have included the Theater homicides. All of this would be to help us (the FBI) prepare a response to the story.....if deemed appropriate.

This is certainly not an immediate matter on our end, but it would be nice to prepare for the reporting or help our partners do the same. Please let me know your thoughts.

John and [REDACTED]

ASAC Denver here. Sorry to hit you guys on a Friday afternoon but wondering if one of you might be able to provide us with some information. Here's the situation – the Aurora, CO (location of 2012 mass movie theater shooting during which 12 were killed) Police Chief just called to advise USA Today reached out to him to ask why the Aurora Theater homicides were not reported and, therefore, did not show up in UCR statistics. According to the reporter, USA Today is

planning to run a story on the failure to report. APD verified the information was reported to the Colorado Bureau of Investigation who is almost certain (they are verifying) the information was reported to the FBI. I have to admit I'm very ignorant on this process but wondering if there is a way to verify the information CJIS received from CBI in 2012 that should have included the Theater homicides. All of this would be to help us (the FBI) prepare a response to the story.....if deemed appropriate.

This is certainly not an immediate matter on our end, but it would be nice to prepare for the reporting or help our partners do the same. Please let me know your thoughts.

Thanks, Mike

John and [REDACTED]

ASAC Denver here. Sorry to hit you guys on a Friday afternoon but wondering if one of you might be able to provide us with some information. Here's the situation – the Aurora, CO (location of 2012 mass movie theater shooting during which 12 were killed) Police Chief just called to advise USA Today reached out to him to ask why the Aurora Theater homicides were not reported and, therefore, did not show up in UCR statistics. According to the reporter, USA Today is planning to run a story on the failure to report. APD verified the information was reported to the Colorado Bureau of Investigation who is almost certain (they are verifying) the information was reported to the FBI. I have to admit I'm very ignorant on this process but wondering if there is a way to verify the information CJIS received from CBI in 2012 that should have included the Theater homicides. All of this would be to help us (the FBI) prepare a response to the story.....if deemed appropriate.

This is certainly not an immediate matter on our end, but it would be nice to prepare for the reporting or help our partners do the same. Please let me know your thoughts.

Thanks, Mike

Subject: UCR Stats Question

John and [REDACTED]

ASAC Denver here. Sorry to hit you guys on a Friday afternoon but wondering if one of you might be able to provide us with some information. Here's the situation – the Aurora, CO (location of 2012 mass movie theater shooting during which 12 were killed) Police Chief just called to advise USA Today reached out to him to ask why the Aurora Theater homicides were not reported and, therefore, did not show up in UCR statistics. According to the reporter, USA Today is planning to run a story on the failure to report. APD verified the information was reported to the Colorado Bureau of Investigation who is almost certain (they are verifying) the information was reported to the FBI. I have to admit I'm very ignorant on this process but wondering if there is a way to verify the information CJIS received from CBI in 2012 that should have included the Theater homicides. All of this would be to help us (the FBI) prepare a response to the story.....if deemed appropriate.

This is certainly not an immediate matter on our end, but it would be nice to prepare for the reporting or help our partners do the same. Please let me know your thoughts.

Thanks, Mike

ASAC Denver here. Sorry to hit you guys on a Friday afternoon but wondering if one of you might be able to provide us with some information. Here's the situation – the Aurora, CO (location of 2012 mass movie theater shooting during which 12 were killed) Police Chief just called to advise USA Today reached out to him to ask why the Aurora Theater homicides were not reported and, therefore, did not show up in UCR statistics. According to the reporter, USA Today is planning to run a story on the failure to report. APD verified the information was reported to the Colorado Bureau of Investigation who is almost certain (they are verifying) the information was reported to the FBI. I have to admit I'm very ignorant on this process but wondering if there is a way to verify the information CJIS received from CBI in 2012 that should have included the Theater homicides. All of this would be to help us (the FBI) prepare a response to the story.....if deemed appropriate.

This is certainly not an immediate matter on our end, but it would be nice to prepare for the reporting or help our partners do the same. Please let me know your thoughts.

Thanks, Mike

I have to admit I'm very ignorant on this process but wondering if there is a way to verify the information CJIS received from CBI in 2012 that should have included the Theater homicides. All of this would be to help us (the FBI) prepare a response to the story.....if deemed appropriate.

This is certainly not an immediate matter on our end, but it would be nice to prepare for the reporting or help our partners do the same. Please let me know your thoughts.

Thanks, Mike

ASAC Denver here. Sorry to hit you guys on a Friday afternoon but wondering if one of you might be able to provide us with some information. Here's the situation – the Aurora, CO (location of 2012 mass movie theater shooting during which 12 were killed) Police Chief just called to advise USA Today reached out to him to ask why the Aurora Theater homicides were not reported and, therefore, did not show up in UCR statistics. According to the reporter, USA Today is planning to run a story on the failure to report. APD verified the information was reported to the Colorado Bureau of Investigation who is almost certain (they are verifying) the information was reported to the FBI. I have to admit I'm very ignorant on this process but wondering if there is a way to verify the information CJIS received from CBI in 2012 that should have included the Theater homicides. All of this would be to help us (the FBI) prepare a response to the story.....if deemed appropriate.

This is certainly not an immediate matter on our end, but it would be nice to prepare for the reporting or help our partners do the same. Please let me know your thoughts.

All of this would be to help us (the FBI) prepare a response to the story.....if deemed appropriate.

This is certainly not an immediate matter on our end, but it would be nice to prepare for the reporting or help our partners do the same. Please let me know your thoughts.

Thanks, Mike

Subject: Follow up on 2012 SHR

Hi [REDACTED]

I'm following up on a question I asked a few months ago about why Sandy Hook and the Aurora Theater shootings were missing from the 2012 SHR data – you responded at that time that SHR is voluntary and the localities/police departments that handled those cases likely did not provide the information to the FBI.

I've checked in with both the Aurora police department and the Connecticut State Police, and the CSP is saying it did send in the supplemental information to the FBI in a six-page report. The UCR numbers bear this out – according to the UCR, the CSP handled 36 homicides in 2012. However, when you open the SHR file, it shows the CSP only handling 9 single-victim cases.

b6
b7C

Because the SHR database has trouble dealing with incidents with more than 11 victims: is there a chance the computer system knocked these cases out? Is that possibly what occurred here? I'm trying to figure out why the two largest homicide events in 2012 aren't reflected in the SHR data, and both had more than 11 victims.

Hi [Redacted]

I've gotten a user inquiry on the 2012 SHR regarding the absence of "notable" shootings in Aurora, CO and Newtown, CT in the data file. Both agencies do report to the UCR (Aurora has other incidents in the SHR). Does their absence in the file indicate the agencies did not report these incidents, or were they excluded for a particular reason?

b6

The FBI's UCR Program is a nationwide, cooperative statistical effort of more than 18,000 city, university and college, county, state, tribal, and federal law enforcement agencies voluntarily reporting data on crimes brought to their attention. The FBI UCR Program relies on the good faith reporting of the law

enforcement agency and the state. Agency may not report data to the FBI UCR Program or may be reported by another agency such as the state police or county sheriff.

Law enforcement agency participants must classify and score offenses from the records of calls for service, complaints, and/or investigations. Since these crime statistics are intended to assist law enforcement in identifying the crime problem, participants must record offense counts, not the findings of a court, coroner, or jury or the decision of a prosecutor. To ensure these data are uniformly reported, the FBI provides contributing law enforcement agencies with guidelines that explain how to classify and score offenses and provide uniform crime offense definitions. Acknowledging that offense definitions may vary from state to state, the FBI UCR Program cautions agencies to report offenses not according to local or state statutes but according to the guidelines provided.

Agencies have until December of the following year to report missing and corrected data. The data contained in data reports and the program's master files may include updates and/or late submissions from participating agencies that are not reflected in the program's various published reports; therefore, the figures in the two may not match. A discrepancy between published data and data contained in the master files does not necessarily indicate an error.

Supplemental homicide data reported in *Crime in the United States* expanded homicide does not include manslaughter by negligence or justifiable homicide. (Separate tables reflect the justifiable homicide data.)

Hi [REDACTED]

b6
b7C

I'm following up on the SHR and UCR data provided to us earlier this month. I am working on a short story about how a number of mass killings, including Newtown and Aurora, aren't reflected anywhere in the SHR data, and how even the UCR data includes crime rates for places such as Newtown that are incorrect (0 homicides, for instance).

Is there someone in your office or in public affairs who could speak with me about this? I know that many of the data problems with the UCR/SHR lie in the local agencies that are responsible for reporting the crimes to the FBI. In addition, I have some basic questions that I just need clarified for my own sake, for instance my total victim count in the SHR data is 13,063 -- not the 12,765 reported online: <http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.->

2012/offenses-known-to-law-enforcement/expanded-homicide/expanded homicide data table 1 murder victims by race and sex 2012.xls Is this because the figures are adjusted upward as additional reports are submitted? I'm just trying to understand the discrepancy.

Thanks much,

Thanks. I'm out of the office Monday but will be back later in the week. Have a good weekend.

Hi [REDACTED]

I'm following up on the SHR and UCR data provided to us earlier this month. I am working on a short story about how a number of mass killings, including Newtown and Aurora, aren't reflected anywhere in the SHR data, and how even the UCR data includes crime rates for places such as Newtown that are incorrect (0 homicides, for instance).

Is there someone in your office or in public affairs who could speak with me about this? I know that many of the data problems with the UCR/SHR lie in the local agencies that are responsible for reporting the crimes to the FBI. In addition, I have some basic questions that I just need clarified for my own sake, for instance my total victim count in the SHR data is 13,063 -- not the 12,765 reported online: http://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2012/crime-in-the-u.s.-2012/offenses-known-to-law-enforcement/expanded-homicide/expanded_homicide_data_table_1_murder_victims_by_race_and_sex_2012.xls Is this because the figures are adjusted upward as additional reports are submitted? I'm just trying to understand the discrepancy.

Thanks much,

Hi [REDACTED]

b6
b7C

My boss, [REDACTED] asked me to follow up with you on the release of 2012 SHR data from the FBI. While the Expanded Homicide tables offer us a good start in understanding the numbers, in previous years, we've received all the raw SHR data in comma-delimited text files. Is there a way we could also receive this for 2012?

Thanks much!
