Forensic Cover Report

Date: 05/20/11

Investigator:

SA (b)(6),(b)(7)(C)
 USSS case no.: 102-775-60071-S

Investigative Summary:

(b)(6),(b)(7)(C)
 SA (b)(6),(b)(7)(C) conducted a forensic examination of digital evidence received from the Cambridge Police Department as part of a network intrusion and wire fraud investigation, case 102-775-60071-S. This examination was conducted pursuant to a search warrant.

This report DVD is designed to provide information on what evidence has been identified as relevant by the examiner on the subject digital evidence. Additional evidence may be present if further information is provided to the examiner.

Items examined:

The following items are discussed in this report cover:

Acer Aspire One with serial number LUSAXOD0010011001E1601 containing a Hitachi 160GB hard drive with serial number QCE2TH4H

A Rocketfish hard drive enclosure containing a Western Digital 2TB hard drive with serial number WMAZA1626675.

An Apple iMac Model A1311 with serial number W8025AXGDB7.

A Western Digital Model WD1200JS-00MH0 120GB hard drive with serial number WD-WMANN1006724.

A HTC G2 cell phone with IMEI 359116031962625 and serial number HT09SR203106. The HTC cell phone contained a Sandisk 8GB micro SD Card.

A Nokia model 2320 cell phone with IMEI 012185001723274

A flash drive with the markings HP and 8GB.

A Sony Micro Vault Tiny.

On 02/11/11, the Apple iMac model A1311 was placed into target disk mode and an image of the hard drive was made using Access Data FTK imager through a Tableau T9 Forensic Firewire Bridge. The image of the hard drive was later examined using Access Data Forensic Tool Kit (FTK) and Guidance Software Encase.

On 02/11/11, the Western Digital 120GB hard drive was imaged using FTK imager through a Tableau T35es forensic SATA bridge. The image of the hard drive was later examined using FTK.

On 02/14/11, Nokia 2320 cell phone was examined using the CelleBrite Universal Forensic Extraction Device (UFED) and SIMCon SIM Card Recovery.

On 02/16/11, the SIM card from the HTC G2 was examined using SIMCon. The SanDisk 8GB micro SD card was placed in a memory card reader and copied through a Tableau T8 Forensic USB Bridge.

Forensic Report

On 02/25/11, The Hitachi hard drive was removed from the Acer Aspire and attached to a Tableau T3u forensic bridge and imaged using FTK Imager. The image of the hard drive was later examined using FTK.

On 02/25/11, The Flash Drive marked as HP and 8GB was attached to a Tableau T8 Forensic USB Bridge and imaged using FTK Imager. The image of the flash drive was later examined using FTK and Encase.

On 02/28/11, The Western Digital hard drive was removed from the Rocketfish Enclosure and attached to a Tableau T35es forensic bridge and imaged using FTK Imager. The image of the hard drive was later examined using FTK and Encase.

On 05/18/11, The Sony Micro Vault Tiny 8GB Flash Drive was copied through a Tableau T8 Forensic USB Bridge.

The results of analysis of images of hard drives by Access Data Forensic Tool Kit (FTK) will be contained in a folder marked as FTK Report. The folder will contain a version of the report in Adobe PDF format, Rich Text Format and HTML script. The HTML version may be viewed by clicking on the file "index.html".

The image of the Acer was also examined by (b)(6),(b)(7)(C) of the Computer Emergency Response Team at the Software Engineering Institute at Carnegie Mellon. (b)(6),(b) provided detailed analysis of the .bash_history file. The .bash_history file records, per user, commands and keystrokes entered into the BASH shell terminal, which was the shell used on the Acer computer. The Analysis of the .bash_history identified several significant commands such as commands that started the keepgrabbing.py python script, configured the static IP address, copied the contents of the 'pdfs/' directory to a folder named '/vol/pdfs' on another computer; retrieved the visited the MIT guest registration web page; submitted a computer or user name (Grace Host) and email address (ghost42@mailinator.com) to the MIT guest registration form; and changed the MAC address that would appear on the network Moore also provided detailed analysis of three python scripts found on the image of hard drive from the Acer. The python script keepgrabbing.py would download PDF files from the URL "http://www.jstor.org/stable/pdfplus/". Moore detailed analysis is contained in the folder CERT Analysis in the folder Acer Aspire One on this report DVD.

The image of the Western Digital hard drive inside the enclosure was analyzed by FTK and Encase. The disk contained a directory "pdfs/". Inside the directory pdfs were 97592 files in Adobe Systems Portable Document Format (PDF). Examinations of a random sample of the files showed that the first page of the documents was a cover page from JSTOR.

The image of the flash drive marked HP and 8GB was examined by Encase and FTK. The flash drive contained a file "keepgrabbing2.py" with script very similar to the script of keepgrabbing.py which was found on the Acer. The flash drive also contained a file "grablist.log". Examination of grablist.log showed a list of numbers in the same format as the titles of the pdf files found on the hard drive in the enclosure. The flash drive also had an ISO image of Ubuntu on it. An ISO image (International Organization for Standardization) is an archive file or disc image of an optical disc. The ISO image of Ubuntu could be used to install the Ubuntu operating system. The Acer Aspire is sold with Windows 7 starter operating system installed however when examined it had the Ubuntu operating system installed.

(b)(6),(b)(7)(C)

Case Information

3/20/2011

Time zone for display: Local Machine Time Zone Settings

Version: AccessData Forensic Toolkit Version: 3.2.0.32216

Case Owner: (b)(6)

Case Name: Swartz-Acer

Case Reference: 102-775-60071 - Acer

Case Description: Acer Aspire One

Report Created: Sunday, March 20, 2011 01:29:40 PM

Agency/Company: U.S. Secret Service

Investigator's Name: SA (b)(6),(b)(7)(C)

Address: 10 Causeway Street

Phone: 817-565-5640

Fax: 817-565-5659

E-Mail: (b)(6),(b)(7)(C)@ussc.dhs.gov

-----Disk Information-----

Vendor: WDC
Model: WD20EARS-00MWB0
Revision: 51.0
Serial Number: WD-WMAZA1626675
Bus: SATA
Device: Direct Access
Capacity: 2.0 TB (2,000,398,934,016 bytes)
Removable Media: No
Cylinders: 243201
Tracks per Cylinder: 255
Sector per Track: 63
Bytes per sector: 512

-----Bridge Information-----

Vendor: (b)(6),(b)(7)
Model: T35es
Description: Forensic SATA/IDE Bridge
Serial number: 000ecc20 003501c9
Channel: SATA
Bridge Access Mode: Read-Only
Read-Only Declaration: Suppresses Read-Only
Write Error Declaration: Suppresses Write Errors
Firmware stepping: 4

A Conserved Region at the COOH Terminus of Human Immunodeficiency Virus Gp120 Envelope Protein Contains an Immunodominant

Proceedings of the National Academy of Sciences of the United States of America © 1987 [National Academy of Sciences](#).

Abstract

A highly immunogenic epitope from a conserved COOH-terminal region of the human immunodeficiency virus (HIV) gp120 envelope protein has been identified with antisera from HIV-seropositive subjects and a synthetic peptide (SP-22) containing 15 amino acids from this region (Ala-Pro-Thr-Lys-Ala-Lys-Arg-Arg-Val-Val-Gln-Arg-Glu-Lys-Arg). Peptide SP-22 absorbed up to 100% of anti-gp120 antibody reactivity from select HIV+ patient sera in immunoblot assays and up to 79% of serum anti-gp120 antibody reactivity in competition RIA. In RIA, 45% of HIV-seropositive subjects had antibodies that bound to peptide SP-22. Human anti-SP-22 antibodies that bound to and were eluted from an SP-22 affinity column reacted with gp120 in RIA and immunoblot assays but did not neutralize HIV or inhibit HIV-induced syncytium formation in vitro, even though these antibodies comprised 70% of all anti-gp120 antibodies in the test serum. In contrast, the remaining 30% of SP-22 nonreactive anti-gp120 antibodies did not react with gp120 in immunoblot assays but did react in RIA and neutralized HIV in vitro. Thus, \approx 50% of HIV-seropositive patients make high titers of nonneutralizing antibodies to an immunodominant antigen on gp120 defined by SP-22. Moreover, the COOH terminus of gp120 contains the major antigen or antigens identified by human anti-gp120 antibodies in immunoblot assays.

Subscriptions and Access

Q. How do users get access to the MUSE journals online?

On-campus access is primarily by IP (Internet Protocol) address. A library or institution subscribing to MUSE provides the institution's range(s) of IP addresses with the subscription order. MUSE also permits access by referring URL.

Off-campus access is validated through subscribing institutions. A user must be affiliated with a subscribing institution in order to access full-text articles in MUSE from off-campus. Users might login to MUSE through their library or institution's website or through a 'proxy' server. Another way for the user to authenticate is to use his/her institutional login prior to accessing the full text articles in MUSE. MUSE supports authentication through the single sign-on methods provided by Shibboleth and Athens.

To login, a user selects his/her institution from the list of institutions registered to access MUSE through Shibboleth. If their institution is not listed, they should refer to their librarian for assistance. Athens users will follow the link for Athens login.

Shibboleth is available only for institutional subscribers, and it can be used to access MUSE collections as well as single titles on the MUSE platform. Athens is available for institutional subscribers to Project MUSE collections only, but not for institutions that only subscribe to single titles.

A subscribing library can request access by referring URL, Shibboleth, or Athens when placing a subscription order or by sending a request to MUSE Customer Support.

[Back to Top](#)

Q. Who is allowed access to Project MUSE if we subscribe?

Authorized users are defined as faculty, staff, students, alumni and library patrons of the subscribing institution. Distance learners, alumni, and other off-campus affiliates may access Project MUSE if their Internet access is through the campus network. Subscribing institutions are expected to enable access only to those people who are authorized users of the campus network.

R I F

[Back to Top](#)

Q. Can I access MUSE on my mobile device?

The current MUSE site does function on mobile devices with a web browser such as the iPhone or iPad. We are working on improvements to the MUSE experience on mobile platforms that will present search, retrieval, and other basic tools in an improved interface for such devices. We are currently in the research and design phase. MUSE will make an announcement when enhancements are available.

[Back to Top](#)

Subscription Terms of License

Q. What are the permitted uses of Project MUSE?

Please review the [Project MUSE Institutional Subscriber Licensing Agreement](#) for complete details on permitted and not permitted uses of MUSE online journals.

[Back to Top](#)

Q. Is interlibrary loan allowed?

Facsimile images that are exact representations of the print journal pages or of printouts from the electronic database may be provided for interlibrary loan under CONTU guidelines and distributed in paper, fax, or digital form.

[Back to Top](#)

Q. Are the URLs for the articles in Project MUSE stable? Can we link directly to the article?

All article-level URLs in MUSE are stable, and adhere to a standard format.

MUSE encourages librarians and faculty members at subscribing institutions to link directly to MUSE articles from electronic reserves and online class syllabi. No special permission is required to link. Be sure to verify the link from the MUSE site.

[Back to Top](#)

Q. Can Project MUSE articles be used in course packs? May I include them in my e-reserve?

Project MUSE articles may be included in course packs and in electronic reserve only through a link to the article. The articles themselves may not be placed on electronic reserve or used in course packs. No special permission is required to link. Refer to the previous question about linking to MUSE article URLs.

R I F

[Back to Top](#)

Q. Is it permissible for MUSE articles to be included in institutional repositories?

MUSE owns the MUSE-generated PDF articles and they may not be used in repositories. The author of an article included online in MUSE should consult his/her agreement with the journal publisher to determine whether the publisher allows a copy of the article to be included in a repository. If both the author and the publisher have provided permission for deposit in a repository, they must provide their own electronic file. MUSE owns the MUSE copy and permission is not granted for the MUSE version in repositories

[Back to Top](#)

Policies

Q. Are the paper and digital articles the same?

Project MUSE digitizes scholarly journals, most of which have been published in paper form for many years. The "edition of record" of these journals is still the paper form, the digital version being enriched with hypertext but otherwise not altered in any way. All content from the print edition is included in the online edition, with the exception of advertisements. If there is a correction made or an errata to announce, we always flag those changes. Occasionally, an audio or video element may be offered in the online version as supplementary material to an article. In a case such as this, the availability of the supplementary material and its URL will be noted in the print article. Presently, there are four electronic-only journals in MUSE: *Advertising and Society Review*, *Postmodern Culture*, *Theory & Event*, and *Journal of Colonialism and Colonial History*.

[Back to Top](#)

Q. Are all MUSE journals peer-reviewed? How is content selected?

All journals participating in Project MUSE are peer-reviewed, scholarly titles. The basic criteria for participation in MUSE are that the journal must be peer-reviewed, be published by a not-for-profit press or scholarly society, and be a sensible fit with titles in the humanities, the social sciences and the arts. Project MUSE has a formal collection development policy for the selection of new titles, an overview of which may be found [here](#). Surveys of subscribing libraries regarding subject areas for which they desire more online periodical content are also taken into consideration, as are specific title suggestions from participants and users. Publishers wishing to have their journal considered for participation in MUSE can use our [online submission form](#). If you would like to recommend a title for MUSE, please first review the [Collection Development Policy overview](#), and then use our [Recommendation form](#).

[Back to Top](#)

Q. What is MUSE's status regarding accessibility and Section 508 compliance?

Project MUSE is committed to being available to all individuals and continually works to improve access for people with disabilities. Please check our [Accessibility and "Section 508"](#) page for the latest information.

[Back to Top](#)

Q. What does "archive only" mean when it appears after a journal title?

The phrase "archive only" means that the journal no longer contributes new issues to MUSE. There are a number of different reasons for a journal to stop contributing new issues to MUSE. For example, the journal might have been acquired by a commercial publisher or a publisher that does not participate in MUSE, the publisher might have other reasons for choosing not to have that journal participate in Project MUSE any longer, or the title might have ceased publication. Even though a journal does not contribute new issues to MUSE all previously launched issues of that journal will remain online and accessible to subscribers. Please also see our [Archiving and Preservation](#) policy for further information.

[Back to Top](#)

Q. How is Project MUSE addressing the issues of archiving and permanent preservation?

Project MUSE is committed to providing permanent maintenance and preservation of all the digital files in the MUSE database. No journal content published online in MUSE will be removed or made inaccessible to current, paid subscribers. All MUSE partner publishers are contractually bound to allow any journal content published in MUSE to remain permanently in the database, even if they should choose to discontinue their relationship with MUSE.

Project MUSE maintains both local back-up servers and a mirror server offsite, in Australia. Further, Project MUSE works with other providers to arrange storage of backup copies of all digital files at their sites to ensure future availability.

Libraries own the material from the MUSE journal collection(s) to which they subscribe. For details on the specific archiving rights of subscribing libraries, please see Section V. Archiving, of the [Project MUSE Institutional Licensing Agreement](#).

[Back to Top](#)

Tools & Resources

Q. Does MUSE provide usage statistics?

Project MUSE provides usage statistics for publishers, institutions, and consortia with a paid subscription to a MUSE collection. Usage statistics are not available for single title subscriptions or for free trial access.

Librarians and consortium administrators may easily view their [usage statistics](#) online.

R I F

An institutional login and password is required to access that institution's usage statistics. Contact [MUSE Customer Support](#) to request a login and password if your institution does not have one already. Institutions may access their usage statistics tool at any time of day, seven days a week. Monthly usage reports are made available on the 15th of the following month, in both Excel and XML formats. Access to statistics via the SUSHI protocol is also available.

Per the COUNTER Code of Practice (www.projectcounter.org), MUSE usage statistics provide data on the total number of searches and sessions as well as number of full-text article and table of contents hits by journal. MUSE is compliant with Release 3 of the COUNTER Code of Practice for Journals and Databases.

[Back to Top](#)

Q. Does MUSE support SUSHI for accessing statistics?

Yes, MUSE supports the SUSHI protocol for accessing statistics. To use SUSHI, an institution must set up a SUSHI client to submit an XML request to MUSE. MUSE will return an XML response with the statistics data. Information needed for setting up the SUSHI connection with Project MUSE is on the [MUSE usage statistics](#) page. Log in using your MUSE usage statistics login and password. Once you have logged in to your institution's page, look for the section "Parameters required to access statistics via the SUSHI protocol". There you will find the destination URL, your institution's reference ID and requestor ID needed to set up the connection with your SUSHI client.

For more information please visit the [NISO SUSHI](#) standard.

[Back to Top](#)

Q. Can users search for JSTOR articles in MUSE for titles JSTOR and MUSE have in common?

From the [advanced search](#) page, select the search option 'Include JSTOR back issues' to add JSTOR citations to your search. JSTOR and MUSE have over 120 titles in common, but just over 40 titles are available for the JSTOR search feature. The JSTOR citation information has been loaded locally into the MUSE search engine, so you will not be searching full-text or LC Subject for JSTOR articles, only authors, titles, and abstracts. Your search, however, will still include all the available fields for MUSE articles. For more information, including a list of the journals included, read about [Links to JSTOR Back Issues](#).

[Back to Top](#)

Q. Does Project MUSE supply MARC catalog records or other tools to help catalogers?

Yes, Project MUSE supplies catalog record sets in MARC21 format for each of the six MUSE journal collections. The records are full level description and include Library of Congress (LC) subject headings. The records reflect journals launched as of the beginning of the subscription year. Updates to the records will be added periodically as new journals are launched during the subscription year. You may download the records from the [MUSE MARC Records Request](#) page.

R I F

[Back to Top](#)

Q. Can you notify me about new journal issues in MUSE?

Our Journal Alert service provides both announcements of new titles launched in MUSE and new journal issues released. Subscribe to alerts for particular journals, subjects, or collections. Alerts are available as RSS feeds and as weekly e-mail announcements. To view a list of available RSS feeds and for more information about subscribing see [Project MUSE RSS Feeds](#).

Our Journal Alerts service allows you to receive weekly e-mail announcements of new titles launched in MUSE and/or new journal issues released each week for particular journals, subjects, or collections. To sign up for weekly e-mail announcements see our [Journal Alert Service](#).

[Back to Top](#)

Q. Does MUSE offer RSS feeds?

MUSE offers several RSS feeds. The feeds provide subscribers with information about new journals and new issues of journals as they become available in MUSE. To view a list of available RSS feeds and for more information about subscribing see [Project MUSE RSS Feeds](#).

[Back to Top](#)

Q. Does MUSE provide instructional or promotional materials for libraries?

Yes. Among the resources that MUSE supplies are online and downloadable PDF [instructional guides](#), as well as suggestions for [encouraging MUSE use](#) on your campus. MUSE also offers free materials such as posters, keyboard calendars, subject-based postcards to distribute to campus user groups, and copies of *MUSE News*, which libraries can order using the [Request Promotional Materials](#) form. See the [Librarians](#) page for links to these and other resources.

[Back to Top](#)

Q. Where does my institution name display on the MUSE site, and can I change it?

The institution name displays on all pages on the MUSE site, at the top of each page. We detect the institution providing access via IP address.

The institution name does not display on pages that are freely available for viewing by the public and where we do not detect the IP address of the institution providing access.

If you would like to change the way your institution's name displays on the MUSE site, please [contact MUSE Customer Support](#), indicating how your institution name currently displays and specifying how you would like the name to display.

R I F

[Back to Top](#)

Linking & Other Technical Information

Q. How can I set up Project MUSE as an OpenURL target?

In order to link to Project MUSE as a target, set your software to link to the following URL, followed by an OpenURL-compliant query string:

http://muse.jhu.edu/cgi-bin/resolve_openurl.cgi

Any OpenURL 0.1 or 1.0 compliant string should work. Project MUSE's software will take the data given in the OpenURL and resolve it. The more complete the data contained in the OpenURL, the better MUSE will be to resolve at the article level. Depending on the amount of data contained in the OpenURL, MUSE may return issue or journal records.

If you are having problems using our OpenURL resolver, please [Request Technical Help](#).

[Back to Top](#)

Q. How can I set up OpenURL links for article citations retrieved in Project MUSE?

You will need to set up OpenURL links for article citations retrieved in Project MUSE searches for journals to which your institution does not subscribe. The institution-supplied link will appear on the turnaway page in MUSE and point the user to alternative resources for the articles. To set up links to your OpenURL compliant linking server for the alternative resources, complete the information requested on our [Enable OpenURL Links](#) form. Your request will be processed in two business days. Please note that MUSE supports versions 0.1 and 1.0 of OpenURL.

[Back to Top](#)

Q. How can I set up OpenURL links in place of MUSE's links to JSTOR in the MUSE search engine? How do I verify if the links are working?

You can set up OpenURL links to JSTOR articles by using our [Enable OpenURL Links](#) form. Your request will be processed in two business days. In order to check if the links are working, go to the advanced search, select to include JSTOR articles in your search and to sort by date, earliest first. Enter a search likely to retrieve JSTOR articles, which, if retrieved, will be at the top of your results.

[Back to Top](#)

Q. Do I need an id and password for the MUSE search engine when setting up federated searching (e.g., with Serials Solutions' Central Search product)?

No, there are no access restrictions on the Project MUSE search engine. It is therefore freely available to search to anyone with or without a subscription. The only area of the MUSE site that requires a subscription is viewing the full-text of articles. No id and password is needed, therefore, to set up federated searching. MUSE can be searched with a variety of federated search products including Serials Solutions' Central Search, and WebFeat. MUSE now also supports any product compliant with the Z39.50 protocol for Information Retrieval.

[Back to Top](#)

Q. What is a referring URL?

A referring URL is sent in the header of an HTTP request. When referring URL is used as a method of authentication, authenticated users connect from a referring page, to which only they have access, to a licensed resource. The provider of the licensed resource recognizes the referring URL from the HTTP request and allows the user access to the resource.

[Back to Top](#)

Q. How can my library gain online access to Project MUSE through EZproxy?

Many subscribers have successfully implemented the protocol by using a configuration similar to the following:

T Project MUSE
U <http://muse.jhu.edu>
DJ muse.jhu.edu

If you are having problems configuring EZproxy, we suggest using the support materials from the Useful Utilities (<http://www.oclc.org/support/documentation/ezproxy/>) web site.

[Back to Top](#)

Q. Is Project MUSE compliant with the Z39.50 protocol for Information Retrieval?

Yes. The Z39.50 protocol for Information Retrieval provides another way for users to search and locate articles in MUSE using a Z39.50 compatible client. An institution must maintain a Project MUSE subscription in order to access the full text articles.

[Back to Top](#)

Q. How do I set up the connection to the MUSE Z39.50 gateway?

An ID and password are not required to set up the connection to the MUSE Z39.50 gateway. The following configuration details will allow for the connection:

R I F

Host: z3950.muse.jhu.edu or z3950.muse.uq.edu.au

Port: 210

Database: MUSE

Functions: Init, Search, Present, Fetch, Scan

Record Formats: USMARC, SUTRS

Search Attributes:

any - 1016

author - 1003

year - 31

title - 4

issn - 8

subject - 21

The 1016 search attribute includes the article full text.

MUSE offers the following functionalities:

Boolean operators (and/or/not)

Phrasing

Right truncation ("wildcarding")

The Z39.50 searches are not limited to the collection subscribed to by the institution; searches will search the entire MUSE database. Access to the full text articles will be based on the Project MUSE subscription maintained by the institution. Please use our online form to [Request Technical Help](#). We welcome your questions and comments.

[Back to Top](#)

Q. How do I use the MUSE RSS feed when authenticating through a proxy server?

You do not have to authenticate through a proxy server in order to subscribe to the RSS feeds. To subscribe to the MUSE feeds, simply copy and paste the URL for the feed into your RSS aggregator and subscribe.

However, to view the full text articles from the links in the Table of Contents displayed in the MUSE RSS feed, you will have to authenticate via the proxy server. Subscribers using a proxy server have been successful accessing the full text by doing the following:

1. Subscribe to the feed
2. Log into the institution's proxy server
3. Find out the domain name of the institution's proxy server (i.e. <http://proxy.xxx.edu>)
4. Copy and paste the Project MUSE URL linked to from the Project MUSE feed (beginning with '/journals/...') to the end of the proxy server address.
5. Copy and paste this new URL into the location bar of the web browser and press Enter. Example: if trying to access the full text in <http://muse.jhu.edu/journals/arethusa/v077/77.1hines.html>, then the new copied and pasted URL would be:
<http://proxy.xxx.edu/journals/arethusa/v077/77.1hines.html>

[Back to Top](#)

R I F

Q. Does MUSE support OAI (Open Archives Initiative)?

Yes. The OAI protocol is another way for institutions to facilitate access to articles in MUSE. An institution may request metadata from MUSE using an OAI command. MUSE will respond to the request by generating and serving XML documents. Based on the type of command sent from an institution, MUSE will supply data such as version of OAI supported (2.0), metadata formats supported (Dublin Core), listing of all journals in MUSE, and articles pertinent to the request.

The OAI base URL for Project MUSE is: <http://muse.jhu.edu/oai>. For requests made through the MUSE Australia server, the OAI base URL is: <http://muse.uq.edu.au/oai>.

As OAI in MUSE is still in beta, we welcome your comments and questions. Please use our online form to [Request Technical Help](#).

[Back to Top](#)

Q. What is Custom Print?

Custom Print is a service provided by Sheridan Press that allows a user to click on a link from MUSE and purchase an article or groups of articles for the purpose of creating a custom publication. The user may choose either print or electronic format for the purchased articles.

Articles contained in [The American Indian Quarterly](#) published by the [University of Nebraska Press](#) are currently the only articles in MUSE to which this option is available. On the article page, look for the link 'Custom Print' to initiate the transaction. Clicking on the 'Custom Print' link takes the user to the web site of Sheridan Press where options for printing the selected articles are available.

[Back to Top](#)

Q. Does MUSE offer a search plugin for web browsers?

Yes, MUSE offers a search plugin that allows you to search Project MUSE directly from your browser. The Project MUSE search plugin adds MUSE to the list of search engines available in the search box in the upper right corner of your browser. The MUSE search plugin can be added to any browser that supports Sherlock and OpenSearch Search Engines Plugins. When using the search plugin, the search results will default to searching the entire MUSE collection of journals. To read about and install the search plugin, go to the [Project MUSE Search Plugin](#) page.

D600c59 (Disk Information).txt

-----Disk Information-----

Vendor: AAPL Fir
Model: ewire Target
Revision: 0000
Serial Number:
Bus: 1394
Device: Direct Access
Capacity: 1.0 TB (1,000,204,886,016 bytes)
Removable Media: No
Cylinders: 121601
Tracks per Cylinder: 255
Sector per Track: 63
Bytes per sector: 512

-----Bridge Information-----

Vendor: (b)(6),(b)(7)(C)
Model: T9
Description: Forensic FireWire Bridge
Serial number: 000ecc01 0009304f
Channel: 1394
Bridge Access Mode: Read-Only
Read-Only Declaration: Declares Read-Only
Write Error Declaration: Declares Write Errors
Firmware stepping: 4
Firmware build date: Aug 5 2009
Firmware build time: 08:03:15
Firmware build type: Release
Drive Vendor:
Drive Model: AAPL Firewire Target
Drive Serial Number:

SYSTEM CRON JOBS - cron.d

1) Swartz\WD1200 found at Harvard\etc\cron.d\postgresql-common System Cron Jobs

```
# Regular cron jobs for the postgresql-common package
#
# To ensure proper access rights, 'ident sameuser' access for
# localhost is required in all cluster's pg_hba.conf. This is the
# default setting for new clusters created with pg_createcluster.
#
# If password access for local is turned on in
# /etc/postgresql/<version>/<cluster>/pg_hba.conf, you must create a file
# <cluster owner home directory>/.pgpass containing a line specifying
# the password, as explained in the PostgreSQL Manual, section 28.12
# (if you have postgresql-doc-8.1 installed, you can find that part of
# the manual in /usr/share/doc/postgresql-doc-8.1/html/libpq-pgpass.html).
#
# Run VACUUM ANALYSE on all databases every 5 hours if pg_autovacuum is not
# running
2 0,5,10,15,20 * * 1-6 root if [ -x /usr/sbin/pg_maintenance ]; then /usr/sbin/pg_maintenance --
analyse >/dev/null; fi
#
# On Sunday you may wish to run a VACUUM FULL ANALYSE as well
# If you do not run a 24/7 site, you may want to uncomment the next line
# so as to do a regular VACUUM FULL. If you need 24/7 connectivity, save
# VACUUM FULL for when you think you really need it.
# 10 3 * * Sun root if [ -x /usr/sbin/pg_maintenance ]; then /usr/sbin/pg_maintenance --full --a
nalyze >/dev/null; fi
```

```
#!/bin/sh

# syslogd Cron script to rotate system log files daily.
#
# If you want to rotate other logfiles daily, edit
# this script. An easy way is to add files manually,
# to add -s (for all log files) to syslogd-listfiles and
# add some grep stuff, or use the -s pattern argument to
# specify files that must not be listed.
#
# This is a configuration file. You are invited to edit
# it and maintain it on your own. You'll have to do
# that if you don't like the default policy
# wrt. rotating logfiles (i.e. with large logfiles
# weekly and daily rotation may interfere). If you edit
# this file and don't let dpkg upgrade it, you have full
# control over it. Please read the manpage to
# syslogd-listfiles.
#

# syslogd Cron script to rotate system log files weekly.
#
# If you want to rotate logfiles daily, edit
# this script and /etc/cron.daily/syslogd to get
# the logfiles in sync (they must not occur in both
# files).
#
# This is a configuration file. You are invited to edit
# it and maintain it on your own. You'll have to do
# that if you don't like the default policy
# wrt. rotating logfiles (i.e. with large logfiles
# weekly and daily rotation may interfere). If you edit
# this file and don't let dpkg upgrade it, you have full
# control over it. Please read the manpage to
# syslogd-listfiles.
#

New York Times columnist David Carr writes that iPad =93renews the =
romance of reading, =94 citing media apps like BBC News, New York Post, =
and Reuters for their effective treatment of content. Carr also commends =

Apple today announced that iOS 4.2, the latest version of the world's most advanced mobile operating system, is available today for download for iPad, iPhone, and iPod touch. iOS 4.2 brings over 100 new features from iOS 4.0, 4.1, and 4.2 to iPad, including Multitasking, Folders, Unified Inbox, Game Center, AirPlay, and AirPrint. iOS 4.2 makes the iPad a completely new product, just in time for the holiday season, said Steve Jobs, Apple's CEO. Once again, the iPad with iOS 4.2 will define the target that other tablets will aspire to, but very few, if any, will ever be able to hit.

-----Disk Information-----

Vendor: WDC
Model: WD1200JS-00MH80
Revision: 200.
Serial Number: WD-WMANN1006724
Bus: SATA
Device: Direct Access
Capacity: 120.0 GB (120,034,123,776 bytes)
Removable Media: No
Cylinders: 14593
Tracks per Cylinder: 255
Sector per Track: 63
Bytes per Sector: 512

-----Bridge Information-----

Vendor: (b)(6),(b)(7)
Model: T35es
Description: Forensic SATA/IDE Bridge
Serial number: 00Decc20 003501c9
Channel: SATA
Bridge Access Read-Only: Yes
Bridge Read-Only: No
Declares Write Errors: No
Firmware stepping: 4
Firmware build date: Oct 5 2009
Firmware build time: 07:53:13
Firmware build type: Release
Drive Vendor:
Drive Model: WDC WD1200JS-00MH80
Drive Serial Number: WD-WMANN1006724
Drive Revision: 02.01C03

-----HPA/DCO Information-----

HPA Supported: Yes
HPA in Use: No
DCO Supported: Yes
DCO in Use: No
Security Supported: Yes
Security in Use: No
Reported Capacity: 120.0 GB (120,034,123,776 bytes)
HPA Capacity: 120.0 GB (120,034,123,776 bytes)
DCO Capacity: 120.0 GB (120,034,123,776 bytes)

Case Information:
Acquired using: ADI3.0.0.1443
Case Number: 102-775-60071
Evidence Number: WD1200
Unique description: WD1200 found at Harvard
Examiner: SA (b)(6),(b)(7)
Notes: Found in desk drawer

Information for E:\Swartz\Swartz Images\WD1200-from-Harvard\WD1200:

Physical Evidentiary Item (Source) Information:

[Drive Geometry]
Cylinders: 14,593
Tracks per Cylinder: 255
Sectors per Track: 63
Bytes per Sector: 512
Sector Count: 234,441,648
[Physical Drive Information]
Drive Model: WDC WD1200JS-00MH80 SCSI Disk Device
Drive Serial Number: WD-WMANN1006724
Drive Interface Type: SCSI
Source data size: 114473 MB
Sector count: 234441648
[Computed Hashes]
MD5 checksum: 371fef195758ba47ee9560476ebe3f2f
SHA1 checksum: 5b047f296d802ad04c0375f1df76a6db6b2763c8

Keywords:
 List the words or phrases that best describe the content of the document. Use the following as a guide:
 - Name of the person or organization
 - Location
 - Date
 - Event
 - Object
 - Action

Summary:
 Write a brief summary of the document's main points. Use the following as a guide:
 - What is the main purpose of the document?
 - What are the main points?
 - How is the information presented?

Notes:
 Write any additional notes or comments here. Use the following as a guide:
 - What are your thoughts on the document?
 - How does it relate to other documents?
 - What are your questions?

References:
 List any sources or references used in the document. Use the following as a guide:
 - Name of the source
 - Date
 - Location

Comments:
 Write any additional comments or observations here. Use the following as a guide:
 - What are your thoughts on the document?
 - How does it relate to other documents?
 - What are your questions?

Attachments:
 List any attachments included with the document. Use the following as a guide:
 - Name of the attachment
 - Date
 - Location

Other:
 Write any other information or notes here. Use the following as a guide:
 - What are your thoughts on the document?
 - How does it relate to other documents?
 - What are your questions?

Joshua Gay

I am a programmer, activist, and community organizer. My interests include social technology, government, education, and non-fiction. Here are some projects I work with, in no particular order:

Black Caucus, Education Institute (2001-2002), campaign strategy (2000-2002) (2001-2002)

The First Worker President (2007) (in 2006, 70 donor supported daily. Started in 1995 and based in Boston, MA, USA. The IWF has a worldwide network to promote workers' rights and to defend the rights of all the workers in the world.)

Free Software, Free Software, edited copies of Richard M. Stallman, Joshua Gay, et al., from by Lawrence Lessig: GNU Press, 2000 (http://www.gnu.org)

Black Caucus Strategy Advisor (2001-2002)

Black Caucus is the premier anti-racist Black Caucus education. They've been online, reflecting with chapters and their knowledge with the world.

The Metropolitan Youth Freedom Strategy Advisor (2000-2002)

The Metropolitan Youth Freedom Strategy Advisor (2000-2002) is a gathering place for sharing information, ideas, techniques, and strategic advice. Its primary goal is to provide you with tools and knowledge that will help you in the classroom, community, and your world. Its ongoing work focuses on anti-racism and anti-sexism.

CELESTIAL FOUNDATION, website content strategy (2000-2002)

CELESTIAL FOUNDATION is a non-profit organization with a mission to reduce the cost of textbooks for the K-12 students both in the US and worldwide. They've been online, web-based collaboration model around the "E-Textbook" CELESTIAL FOUNDATION website for programs and thousands of high quality educational content that will help you in your work and provide an ongoing environment for learning.

Distance Learning, website strategy (2001-2002)

Distance Learning is a website that is dedicated to providing the use of free and open educational resources for teachers and students. The goal is to get these materials into classrooms. Our approach is to bring all of the free and open materials to the classroom in the form of a website, and to help you in the classroom and the world. Our goal is to provide a website in classrooms around the world.

The League of Technical Workers, website (2000-2002)

The League of Technical Workers is a nonprofit (501c3), nonpartisan organization dedicated to providing and building technical workers in support of organizing and governmental systems.

One Education (2001-2002) website (2001-2002)

One Education is a website that is dedicated to providing the use of free and open educational resources for teachers and students. The goal is to get these materials into classrooms. Our approach is to bring all of the free and open materials to the classroom in the form of a website, and to help you in the classroom and the world. Our goal is to provide a website in classrooms around the world.
