**Subject:** document statistics  
A per-meeting count of records (including consent releases) to date totals a little over 37,000 documents processed for release by the Board. Is there a simple, or at least non-tedious way to figure how many pages these amount to? Jeremy would like some count as long as it will not involve an unreasonable amount of resources.I have also left Steve Tilley a message asking if he has a particular method or formula to determine this.Any input would be appreciated!!
