Subject:	e-mail deficiencies
Body:	fyiTo: Tracy Shycoff/ARRB, Chet Rhodes/ARRBcc: From: Phil Golrick/ARRB Date: 02/16/95 09:18:05 AMSubject: e-mail deficienciesI have noticed that often there is a delay of up to a few hours in actually receiving an E-mail, compared to the time that the computer says the message was sent. Moreover, the current system gives the user no indication that an E-mail has been received, unless the user happens to be in Lotus Notes. (Even then, the indication is easy to overlook.) Most people, at least in the A&R staff, spend the large majority of their time in WordPerfect or other "mail-blind" applications. This has led to several instances where I or one of my colleagues have not read a phone message until it is too late to respond to it that day. In refining the computer system and whatever new phone system we have after the office move, please make fixing these problems a PRIORITY. Otherwise, as our office gets larger, we will be increasingly inefficient and, to outsiders, will appear unprofessional.
