Subject: Gum Shoe

As you can see I'm continuing to do a lot of work in Gum Shoe and have identified several other areas that would benefit from some refinements:1) At the view screen can you assign a name identifier field in place of the time field. It is more important for me when I'm trying to find some notes I entered to see "Notes on Issue #8 May 10, 1995 GUS RUSSO" than it is to see the exact minute I did the work.2) Can you create the same type field for the Interview function. I did an interview in Issue #8 today and all I get at the View screen is Unknown Activity (Interview.) I'd like to have the same view as with Notes.3) I need one repository where I can place all the potential investigative contacts I'll need to make or where I can put all the contacts I've made, beyond what just appears in each investigative memo I create. It could appear on the screen very much the same as my Address Book does. I would like it to have fields for the contact's name, address, telephone, fax,, date of contact and a reference to the main document it is mentioned in (ie. Issue #8, Interview with Grevenberg, May 10, 1995.) Now, if you can do that much it would really be spectacular if I could avoid typing all the information twice by being able to give a command and having the information that I've entered in the main document transferred and formatted to this investigations contact/address book. What do you think?4) I started to send a letter in Issue #8 that I didn't send because they called instead. Can you delete that so it's not taking up space?
