**Subject:** Computer Problems

1. When I pull a letter in Gum Shoe into WordPerfect, I am getting a lot of garbage with it that makes it more time consuming to fix it up than to type it myself to begin with. I have to go into reveal codes and remove a lot of unwanted tabs, spaces, comma, incorrect font, etc. Can Gum Shoe be programmed to produce documents in the required format? Or at least cleaned up a little?2. I need widow/orphan to be permanently ON for ALL documents, please. Thanks.
