Subject: The Crocodile and You
The crocodile is older than you and me. He goes clear back to the mid-Triassic period, and looks it. When the dinosaurs gave out, toward the end of the Cretaceous, or Age of Belief, some crocodiles wanted to call it an era, too, but others argued that, while they accepted full reesponsibility, they had done absolutely nothing to warrant extinction, and that the next hundred million years could be golden ones. It must be admitted that there have been disappointments. Nowadays, crocodiles can hardly bring themselves to get out of bed. (To be continued)
