**Subject:** Evidence tracking

Can the database "Medical Database", as it is now called, do all this?To: Dennis Quinn/ARRB, Tammi Long/ARRB, Joan Zimmerman/ARRB, Douglas Horne/ARRB, Noelle Gray/ARRBcc: Anne Buttimer/ARRB, David Marwell/ARRB From: Jeremy Gunn/ARRB Date: 11/05/95 03:42:16 PMSubject: Evidence trackingIn order to avoid duplication, and to keep Noelle from going crazy, please coordinate our evidence tracking (both medical and forensic)? Let's have the master chart /database include:Section I: pure" medical evidence for JFK (e.g., skull fragments, autopsy notes, photos, x-rays, etc.)Section II: derivative medical/forensic evidence for JFK (missile fragments, shells, shirt, jacket, weapons, test firings, etc.)Section III: other JFK evidence that may be importantSection IV: Officer Tippett evidence (to the extent there is any controversy)Section V: Oswald/Ruby evidence (to the extent there is any controversy).We would like to be able to trace the chain of custody from the first appearance of the evidence to the National Archives (or to where it was lost).In conjunction with the chart/database, let's have an appendix that includes critical records that document the chain of custody.The chart should clearly identify the important evidence that is either not in the Archives or in which the evidence in the Archives is so questionable that we should pursue the matter.
