Steve called. They have located the RG 87 records, which are not very extensive. Martha is pulling the boxes so that we can review them. He is also pulling some correspondence files that may help put the distribution of records in context. Before going, you should probably call Martha to make sure that she has pulled the documents. Please take with you the most recent version of my chart and see if you can identify examples of other types of records or information that will help answer our questions. Please don't write in ink on the copies you make. It makes it more difficult to photocopy them when we need to make copies to send to others. Could you also please check the tabbed items 11 and 12, which contain RIF numbers of potentially useful documents. Thanks.
