**Subject:** File 63-5327

File 63-5327 is the FBI's main file on James Riddle Hoffa. It consists of 50 sections, but because so many of the sections have "sub A" enclosures, the FBI has many more than 50 standard sized volumes. The JFK Task Force currently has at least 11 of the 50 sections (35 standard sized volumes due to the "sub A" enclosures that come with each section) because the Task Force is processing selected documents from these 11 sections. If you would like, you can go to the FBI to look through those sections that they already have in their offices. I can show you where they are, and so can Debbie, who, by the way, asked me to remind you that she still has that Becker stuff for you.
