Subject: Sound Drivers
The sound driver on Cathy's computer seems to be corrupted or something. When she logs in, several messages come up saying that the file vsgrbx16.386 (or something like that) cannot find the sound driver. I tried copying some of the drivers from my machine hoping that might fix it, but no luck. Is there a disk to reinstall the sound system lying around somewhere, or shall I just try to completely disable sound on her machine? What she really wants is for no error messages to come up during login so she doesn't have to sit there and punch keys. Thanks...
