Subject: Re: FYI: Two things

Body: The /AU command turns on Autoendcap which allows the Novell Print drivers to send data to a Print Queue once you exit and application.   We do have this option turned on in the LPT Settings area.The other item looks like a Client OS/2 Question for printing.Voting Machine looking good and I am looking forward to Thursday to try it out.To:Chet Rhodes/ARRBcc: From:David Marwell/ARRB   Date:03/04/96 11:11:59 AMSubject:FYI: Two thingsFYI...Author:Alisa Stein/RIA @ RIA @ WorldComComposed: 02/29 05:03 PMReply to :Two things1. If you are networked with Novell add the /AU to your capture.2. QMS 1725 printers latest drivers for OS/2 - are not notes compatible. Check that whatever you are using for windows is!Alisa
