Subject: Re: datadiscs
David what if we took a computer over with the program you wrote on it and just let her feed it in and then call us when the database is finished. It would save her from coping the disks and save us from feeding them in. Better yet we just let them have the program they run it on their computer and we use the tape backup unit to transfer the data from them to us! Of course this means I need to be able to get in their and shop at the cool FBI store. To: Phil Golrick/ARRB, David Marwell/ARRB, Chet Rhodes/ARRBcc: From: Kevin Tiernan/ARRB
Date: 03/20/96 09:39:31 AM Subject: Datadiscs I spoke with Pat this morning. She said it will take her two weeks to copy the 200+ discs. She offered to pull everybody on the IA team off of their data entry work to get it done in two days, but I was not willing to make that decision. I think from a quality control viewpoint it would be better to have her do all of the copying.
