I was just checking to see if you are doing any databasedevelopment and/or running applications on an Internet or Intranet. If youare, on what platform are you running it? Are you having trouble using yourdatabase on it?If you could email me back a short response, I will be able to give you anincredibly quick solution with some free evaluation software from Wall Datacalled Arpeggio Live!Arpeggio Live! is a publishing server that allows anyone with a web browserto view applications and information from corporate host systems overcorporate intranets or the internet. Because Arpeggio Live! technologydynamically converts applications for use on the web, organizations cantake advantage of the internets accessibility and user base without havingto invest in development resources.There has never been anything like Arpeggio Live! It's the breakthroughserver software, that without programming, lets you draw data andapplications from a wide array of disparate sources and publish them forviewing by anyone having a web browser.If this can't help we might have something else that will, just let meknow. If you have any questions or comments, please call me.Feel free to check out the Wall Data website atwww.walldata.comThank you for your time and interest.Tish SeballosAccount ExecutiveSuset Direct, IncPh. 512-464-8537Fax 512-502-9692E-mail : Tish_Seballos@mail.sunsetdirect.com
