Subject: Re: Server hard drive

Chet,Let's try and figure out a way to solve this without spending more money. We are in a financial zero sum mode and we have not budgeted money for this.For example, can we put all data from 1995 onto a (backup) hard drive and delete it from the drive we use on a daily basis? Can we make a tape back-up of 1995 data and access it only in emergencies? Any other ideas?

Well we need to purchase a larger hard drive for our notes server. (either one) If the new server remains up and running for the next few days and proves to be stable I would like to purchase the drive for that machine. As it so happens it will cost a lot less than buying one for the old server. Cost: \$300-\$400 vs. \$800-\$1000We have enough space for the near term but as we wind down and email continues to add up we will run out of space in a month or so.thanks
