
Final Report, Chapter on Donations
Thomas W. Wilson
Donation to the JFK Collection

Home e: \wp-docs\Wils3.wpd

On September 11, 1998 Mr. Thomas W. Wilson of Pennsylvania made a presentation to Review Board staff summarizing his 8 years of research into the authenticity and significance of the JFK autopsy images and the Zapruder film, and additional study of the Mary Moorman Polaroid photograph, using “photonics” as a technological tool.

Mr. Wilson donated the following materials to the JFK Collection:

- (1) A 20-page “executive summary” of his work;
- (2) A graphic presentation of Mr. Wilson’s research conclusions about President Kennedy’s head wounds, using “A.D.A.M.” software to display his conclusions;
- (3) A 20-minute audiotape of a discussion between Mr. Wilson and former Navy x-ray technician Jerrol Custer, dated 3/28/98.
- (4) A commercially-sold videotape summarizing his work.

Mr. Wilson believes he possesses a considerable amount of scientific and physical evidence, accumulated over 8 years (from 1988-1996), proving his contention that President Kennedy was shot from the front, not from behind. He is willing to donate *all* of this material to the JFK Collection if FBI or Justice Department officials will first allow him to make his full two-day presentation on the evidence he has collected regarding the Moorman photograph, the Zapruder film, and the autopsy photographs of President Kennedy.
