

CIA DOCUMENT COLLECTION

- Operational Report Dated 10/18/63 - This document indicates that the photos taken during the initial stages of the Cuban photo surveillance operation were sent to TSD for review. This coincides with Oswald's visit to the Cuban Consulate. I recommend requesting from CIA all TSD files from September- November 1963 and, if possible, limit the request to the files relating to the Mexico City Station. [We may have a problem in determining the origin of these files: TSD at headquarters or a local TSD office in Mexico City. I recommend requesting the CIA to brief us on the standard operating procedures regarding this aspect of the technical operations in Mexico City.]
- Probe again for the audiotapes and other copies of the transcripts.
- Propose another formal request to the Mexican government to search their files once again for assassination records.

DOCUMENT FROM NARA(DOWNTOWN)

- There was a keyword index created by ISD of OCR that included files from the 1950s and 1960s. I believe that this source could prove to be extremely helpful in locating assassination records.

LOPEZ REPORT

- Request photos from the secondary basehouse that was watching the Soviet Embassy. The CIA never gave these to the HSCA.

NEWMAN - OSWALD & THE CIA

- Newman claims that there were CIA surveillance bases that performed technical operations on behalf of the NSA. He also alleges that these bases/operations were part of TSD and given crypts with the diagraph "ZR". I recommend probing further into the meaning of the ZR crypts/operations that took place in Mexico City at the time of Oswald's visit. (The CIA has not given us a clear meaning for many of the ZR crypts.) The CIA, or more probable, the NSA may have technical data or information that may include the "Oswald calls" and/or conversations that took place in the Cuban and Soviet embassies in Mexico City.
- Probe further into Mrs. T's missing transcript. (p. 369)

PERSONAL REQUESTS

- Request any files on joint operations between CIA/DO and Army Military Intelligence, in particular anti-Castro operations at JMWAVE.
