Subject: SI and H Experimentation, 9 May 1951 (Room 20 - Building 13)

On Wednesday, 9 May 1951, Messrs and and conducted experiments in SL and H between approximately 5:30 PM and 7:30 PM with as volunteer subjects.

Since this was the initial experiment or test in a continuous series, all subjects were very thoroughly briefed on the nature of the work, the methods, and, to a certain extent, the ultimate aims of the B problem. All present were cautioned as to the secrecy necessary for the experiments.

Since for the suggestability and capacity of each subingness to continue after the initial briefing, a series of tests were begun to determine the suggestability and capacity of each subject. Details follow:

test. This test was tried twice by attempting the "fall back" test. This test was tried twice by a second both times moved her feet rather than fall back toward every howgave for the "hand clasp" test and although her hands remained somewhat locked, the clasp was not strong.

The general impression of subject is that she is possible only and may be timid or reserved because of fairly recent operation.

test, test,

General impression appears to be an excellent subject and should be capable of complete somnambulism and advanced experiment action. In this case, agree that since in the "arm rising", she should have been at that point induced into a complete trance.

quickly and would have fallen completely except she moved her feet. After a discussion, for the tried the "hand raising" test from a chair along side of the tried the "hand raising" test stest, but did not attain the depth of the sole of the sole of the tries cussion. After some discussion, the sole arm and stated she felt that the sole arm and stated she felt that ness had something to do with the phenomena. The sole of the moved across the room and produced again an excellent result from a distance of about 8-10 feet.

General Impressionject and if her interest can be generated may be very good material.
