875 NORTH RANDOLPH STREET
SUITE 1425
ARLINGTON, VA 22203-1995

IN REPLY REFER TO:

5720
Ser BD042/040
ONR FOIA 17-053
September 5, 2017

Mr. John Greenewald
[REDACTED]
[REDACTED]

Dear Mr. Greenewald:

This is the final response to your Freedom of Information Act (FOIA) request received by the Office of Naval Research (ONR) on July 11, 2017 and given the number 17-053 in our tracking system. You requested MDR, under the terms of Executive Order 12958, as amended, of the following document: Laser Eye Protection (U) dated April 1988. A copy of your request is attached to this letter.

ONR's records are maintained in accordance with the Department of the Navy Records Management Program Manual (SECNAV M-5210.1), the Department of Navy Standard Subject Identification Code Manual (SECNAV M-5201.2), and National Archives and Records Administration (NARA) guidelines. Not all records are permanent and some records may have been destroyed based on established disposition schedules. ONR does not maintain a central records room or consolidated records database.

Your request is considered granted in full. FOIA requests received by ONR are forwarded to the organization within ONR having cognizance over the subject matter of the request and a search is conducted of unclassified and classified records to identify responsive records. This request was reviewed by the Assistant Designated Federal Official (ADFO) for the Naval Research Advisory Committee (NRAC). The ADFO returned two responsive records containing fifty-five pages. A subsequent review was performed by Naval Air Warfare Center Aircraft Division (NAWCAD), authorizing release. These records are attached to this letter.

We have classified you as an "other" requester. As such, you are entitled to 2 free hours of search time and 100 pages of reproduction prior to any fees being assessed. Because your request did not exceed the reproduction fees there is no charge for this request.

If you have questions on any part of this letter, please address them to Mr. Michael Ferrari at (703) 696-4303 or ONRFOIA@navy.mil. Please reference ONR FOIA 17-053 in any correspondence discussing this case.

Sincerely,

A handwritten signature in black ink, appearing to read 'EO', with a stylized flourish at the end.

Edward Orlowsky
Director
Management Services Division, BD042

UNCLASSIFIED

EXECUTIVE SUMMARY (U)

(U) The Naval Research Advisory Committee (NRAC) Panel was requested to undertake a rapid review of the laser threat to Navy and Marine Corps aviation to reassess the threat, the adequacy of Operational Requirements (OR) to develop means to protect against it, to review present Navy protection programs and the Research and Development (R&D) organization, and to make recommendations for broader R&D leading to the development of protection against the emerging frequency agile threat. The Terms of Reference (TOR) are included as Appendix A.

(U) The panel membership, included as Appendix B, contained members with engineering, research, and medical backgrounds and was assisted by the Navy in-house R&D community. The panel drew the conclusions and made the recommendations described below. The (Acting) Assistant Secretary for Research, Engineering and Systems (ASN (RE&S)) signed three tasking letters in response to this panel's recommendations. These are also included in the Appendices.

(U) There are a variety of friendly and hostile lasers currently developed by military forces in the form of laser range finders and designators. Some of the Soviet lasers may have power levels unwarranted by range finder or designator applications, but it is not known whether these are intended as anti-personnel weapons. Laser radiation has been experienced by U.S. flight crews flying reconnaissance missions. While there are several different damage mechanisms (discussed in this report), present lasers can cause eye damage at ranges up to a few miles. However, they can cause a "dazzle" effect at greater ranges (particularly at night) when illumination of a cockpit and the scattering of light results in the inability of the crew to perform its mission and can result in the loss of the aircraft. The panel concluded that the laser threat is growing and whether intentionally used as anti-personnel weapons or causing damage only accidentally, lasers must be considered a growing anti-personnel threat against which protection should be provided. The naval aviators most exposed to this threat are the air-to-surface attack aircraft and the Marine aircraft and helicopter crews supporting ground combat.

(U) While early deployed lasers operated predominantly at only two wavelengths, the number of wavelengths used is now proliferating. It is expected that a tunable (frequency agile) laser threat will also develop soon. The present program to protect naval aviators from the laser threat is based on developing helmet visors or goggles which have narrow band spectral line rejection filters at the threat laser wavelengths, attenuating incident laser energy at these wavelengths, thus preventing laser radiation from damaging eyes. The panel reviewed the OR of the Navy and of the other services and found them to be similar and the R&D effort well

UNCLASSIFIED

coordinated. The OR called for protection at two wavelengths. The OR did not address the frequency agile threat, nor protection from the "dazzle" effect, and did not address the possibility of providing protection by evoking aircraft sensors to warn of laser illumination and the reflexive application of eye protection for the crew. The panel recommended changes in the OR to correct these deficiencies, and these changes were made.

(U) The technical approach used to protect against fixed frequency lasers cannot be applied to protection from the agile threat or even to the protection from a larger number of fixed frequency threats. As more band rejection filters are built into a sandwich, transmissivity of the visor at other wavelengths decreases also, making it unusable at night and limiting its utility in the daytime. In addition, the level of attenuation provided by visors at present laser wavelengths is only adequate against laser powers used at present and may not be adequate against higher power Soviet lasers, should these be intended as anti-personnel weapons. There are other mechanisms that may be effective against the agile threat. Among these are the optical limiters that restrict the intensity of light they transmit and the intensity activated optical shutters that make the visor momentarily nontransparent when illuminated by strong laser light. The investigation of these mechanisms is still in an early stage (6.1 and 6.2). The panel identified a list of possible physical mechanisms from which the more promising need to be pursued to develop protection against the agile threat. The panel also recommended the initiation of system level laser protection approaches which involve the use of sensors on the aircraft as part of the laser protection program. This can provide illumination sensing and analysis capability on the aircraft prior to the illumination of the crew itself. The time so gained can be used to initiate reflexive protection measures and pilot illumination evasion. Recommendations to increase the 6.2 funding to provide for this research were made and the funds were provided in the FY 88 budget.

(U) The panel reviewed the Navy organization for R&D for laser eye protection for aviators and found the organization and the Navy laboratory support and leadership excellent. It must be pointed out, however, that as laser protection moves from the protection of eyes of aviators by visors to systems solutions involving the aircraft and its sensor system, the R&D management of the laser protection program may have to be broadened.

(U) The panel identified priority intelligence collection requirements against the laser threat. The ASN (RE&S) signed a letter to initiate such increased intelligence collection and efforts are underway to carry out these tasks.

UNCLASSIFIED

(U) In conclusion, the panel found the threat to be growing rapidly and the need for R&D for protection from the agile threat to be of great importance. The panel is pleased that its recommendations were acted upon rapidly and commends the Navy laboratory personnel for its strong technical leadership in this important area for the Navy.

TERMS OF REFERENCE FOR LASER EYE PROTECTION

- BACKGROUND
- PROBLEM
- TASKS
 - REVIEW CURRENT R&D LASER EYE PROTECTION PROGRAMS
 - VALIDATE CURRENT AND PROJECTED THREAT
 - REVIEW REQUIREMENTS FOR COCKPIT COMPATIBILITY, NIGHT VISION, AND MANUAL DEXTERITY
 - DETERMINE STATUS OF OPERATIONAL REQUIREMENTS TO COUNTER THE THREAT
 - IDENTIFY NAVY ORGANIZATIONAL RESPONSIBILITIES
 - ASSESS INDUSTRIAL AND ACADEMIC TECHNOLOGY BASES
- GOAL
 - DEVELOPMENT OF RECOMMENDED COURSES OF ACTION TO ACHIEVE/ACCELERATE AN AGILE (MULTI-FREQUENCY) LASER EYE PROTECTION CAPABILITY

UNCLASSIFIED

FIGURE 1.

TERMS OF REFERENCE FOR LASER EYE PROTECTION (U)

BACKGROUND (U)

(U) Thousands of lasers are currently deployed for various purposes (e.g., rangefinding and target designation) and could be used against personnel to cause either temporary or permanent eye damage. Of particular concern is the fact that future laser devices could operate anywhere in the visible, near infrared and far infrared bands. The present Navy/Marine Corps program to provide laser eye protection consists of three elements: two directed at discrete wavelength protection and the third, longer term effort under development, against the entire agile laser band.

PROBLEM (U)

- o (U) Laser eye protection devices are wavelength dependent and multiple devices cannot normally be used concurrently. Additionally, cockpit display and visual requirements

UNCLASSIFIED

UNCLASSIFIED

SECTION II
BRIEFING CHARTS

UNCLASSIFIED

UNCLASSIFIED

greatly inhibit protection device versatility. A need exists for a generic laser eye protection device that places no limitation on personnel performance.

- o (U) Navy participation in the development of protection against the entire agile laser band is minimal and only leads to a full capability in 1998.

TASKS (U)

(U) The following subjects and tasks will be reviewed and/or accomplished.

1. (U) Review current Navy and DOD R&D laser eye protection programs.
2. (U) Validate current and projected threat. Specifically, review potential present and future laser devices capable of use against personnel.
3. (U) Review requirements for cockpit compatibility, night vision, and manual dexterity.
4. (U) Determine status of OR to counter the threat.
5. (U) Identify Navy organizational responsibilities for laser eye protection.
6. Assess industrial and academic technology bases.

GOAL (U)

(U) To develop recommended courses of action to achieve/accelerate an agile (multi-frequency) laser eye protection capability.

REPRESENTATIVE DANGER ZONE COMPARISON (U)

- o (U) Dazzle is the loss of visual function caused by excessive light in the eye. The light profile is characterized by both temporal and spatial nonuniformity of illumination.
- o (U) The most significant near term threat to the successful completion of a naval aviator's mission is laser-induced night dazzle.
- o (U) Day dazzle and eye damage can become a more significant threat at higher power levels and for pulsed laser sources.

BEHAVIORAL AND PSYCHOLOGICAL IMPLICATIONS

SCHEMATIC ILLUSTRATION OF THE RELATIONSHIP BETWEEN VISUAL EFFICIENCY AND LUMINANCE FOR RECOGNITION AND FOR GUIDANCE VISION. NOTE THAT WHILE THE EFFICIENCY OF RECOGNITION TASKS (SUCH AS READING OR TARGET IDENTIFICATION) ARE SYSTEMATICALLY RELATED TO LUMINANCE, VISUALLY GUIDED BEHAVIORS ARE ESSENTIALLY INDEPENDENT OF LUMINANCE (AS WELL AS IMAGE BLUR) OVER THE FUNCTIONAL RANGE OF THE VISUAL SYSTEM. THEREFORE, LOW TRANSMITTANCE LASER EYE PROTECTION AT DUSK/NIGHT WILL:

- DEGRADE/ELIMINATE ALL VISUAL RECOGNITION AND DETECTION OUTSIDE OF COCKPIT (30% RELATIVE EFFICIENCY)
- REDUCE DISPLAY LUMINANCE AND CONTRAST/COLOR CONTRAST BELOW DESIGN SPECIFICATIONS TO THE POINT WHERE RESOLUTION OF IMAGERY IS PREVENTED.

UNCLASSIFIED

FIGURE 7.

BEHAVIORAL AND PSYCHOLOGICAL IMPLICATIONS (U)

PERFORMANCE OF HUMAN-MACHINE SYSTEMS IS OFTEN LIMITED BY BEHAVIORAL

FACTORS (U)

- o (U) Glare can substantially degrade, possibly prevent, visual performance.
 - (U) Short term glare can have the same impact on mission success as permanent eye damage.
- o (U) Glare will differentially affect visual performance as a function of:

UNCLASSIFIED

UNCLASSIFIED

- (U) Type of task (recognition/detection versus orientation/visual guidance)
- (U) Ambient illumination (day vs. dusk vs. night)
- (U) Intensity and wavelength (short vs. long wavelength).
- o (U) Psychophysiological effects can only be reduced/eliminated through adequate eye protection which maintains necessary image quality.
 - (U) High transmittance (photopic, mesopic, and scotopic)
 - (U) Sufficient optical density to eliminate glare
 - (U) No further restrictions to field of view
 - (U) Continuing normal cockpit functions.
- o (U) Psychological effects of glare can be reduced through:
 - (U) Training (e.g., safe exposures)
 - (U) Development of coping strategies/countermeasures (will also be effective in preventing retinal burns).

(U) Behavioral research on the effects of coherent light is necessary to provide guidelines for engineering decisions for the development and implementation of laser eye protection.

UNCLASSIFIED

UNCLASSIFIED

THREAT SUMMARY

- THERE IS AN EXISTING AND INCREASING LASER THREAT TO THE NAVAL AVIATOR
- SOME OF IT IS FROM FRIENDLY SYSTEMS (DESIGNATORS, RANGEFINDERS, ETC.)
- THE GREATEST NEAR TERM THREAT IS DAZZLE/FLASH BLINDNESS
- THE THREAT NOW IS AT A FEW DISCRETE WAVELENGTHS
- IT WILL INCLUDE FREQUENCY AGILE LASERS IN THE FUTURE
- WHETHER INTENDED OR NOT, SOVIET LASER SYSTEMS CAN BE USED AS ANTI-PERSONNEL WEAPONS

PRESENT

- LOW POWER SYSTEMS MOSTLY FOR RANGEFINDING/TARGET DESIGNATION
- SOVIET SYSTEMS TYPICALLY MORE POWERFUL THAN WESTERN EQUIVALENTS
- THREAT FROM OWN SYSTEMS SHOULD BE FACTORED

FUTURE

- WIDE SPREAD LASER WEAPON SYSTEMS DEPLOYMENT LIKELY WITHIN NEXT DECADE WITHIN SOVIET/WARSAW PACT FORCES/THIRD WORLD
- INCREASED POWER LEVELS PROBABLE
- TUNEABLE LASER SYSTEMS LIKELY, LENDING SOVIET WARTIME RESERVE MODE (WARM) POTENTIAL
- MAY BE CONSIDERED ESSENTIAL AS COUNTER TO LASER-GUIDED WEAPONS SYSTEM
- ANTI-PERSONNEL USE OFFERS NEAR "UNLIMITED" FIREPOWER

LIMITATIONS OF THE CURRENT NAVY OR

- ONLY REQUIRES EYE PROTECTION (VISORS) TO AVOID EYE INJURY AND TO COMPLETE MISSION.
- LIMITS THE SOLUTION TO VISORS/GOGGLES.
- DOES NOT ADDRESS STARTLE, FLASH BLINDNESS, DAZZLE/GLARE WHICH MAY NOT CAUSE EYE DAMAGE, BUT COULD PRECLUDE MISSION COMPLETION, AND CAUSE LOSS OF AIRCRAFT.
- DOES NOT ADDRESS FUTURE AGILE FREQUENCY LASER THREAT.
- DOES NOT ADDRESS THE HIGH POWER CAPABILITIES OF SOVIET SYSTEMS WHICH COULD BE EMPLOYED AS ANTI-PERSONNEL WEAPONS.
- SHOULD BE MORE SPECIFIC ABOUT THE EYE EFFECTS THE NAVY WANTS TO PROTECT THE PILOTS/CREWS AGAINST THE MOST, AND WHICH MISSIONS HAVE THE HIGHEST PRIORITIES.
- DOES NOT PROVIDE THE OPTION OF A SYSTEMIC-ORIENTED SOLUTION (PLATFORM), OR ALTERNATIVE COMPLEMENTARY SOLUTIONS TO VISORS.
- DOES NOT PROVIDE FOR VISION SYSTEM PROTECTION OTHER THAN PILOTS' EYES.

POSSIBLE FUTURE APPROACHES

BETTER EYE GLASSES

- AGILE FILTER
- HIGHER OD
- OPTICAL LIMITERS
- MATERIALS (MOSTLY ORGANICS AT THE MOMENT):
 - POLYMERS - NONLINEAR
 - LIQUID XTAL
 - PHOTOCHROMICS
- OPTICAL SWITCHES?

SYSTEM/PLATFORM LEVEL SOLUTIONS (MULTIPLE SYSTEM SOLUTION)

- UV AND IR FILTERING AT CANOPY
- LOW CONCENTRATIONS OF VIS. DYES MAY REDUCE CANOPY GLARE
- DAZZLE PROTECTION: DETECT AND REACT TO SPECIFIC WAVELENGTHS
- HIGH ENERGY PULSES

- FOCAL PLANE PASSIVE (LIMITERS OR SWITCHES) FOR GUNNERS
- REP RATE DETECTORS AND "HIDE AND PEEK" MODE

- REMOVE DIRECT VIEWING - HMD AND TV CAMERAS

MATERIALS RESEARCH:

- NON-LINEAR ($\chi^{(2)}$) MATERIALS (PHASE CONJUGATE MIRRORS, LIMITERS)
- FAST PHOTO CHROMICS
- SEMICONDUCTOR AND PLASMA SWITCHES
- ABLATIVE, FRUSTRATED TOTAL INTERNAL REFLECTION OR PHASE CHANGE SACRIFICIAL MIRRORS

LASER WARNING DEVICES

- LASER SIGNATURES
 - COHERENCE/DIRECTIONALITY - REDUCED AFTER ATMOSPHERIC TRAVEL
 - HIGH INTENSITY
 - BRIGHT REL TO BACKGROUND - ALLOWS FALSE SIGNALS
 - MONOCHROME SPIKE - NEED SPECTRUM ANALYZERS
- PULSE SOURCE
 - USUALLY FIXED REP RATE
 - SMALL ON : OFF RATIO

RECOMMENDATIONS

REQUIREMENTS

- **MODIFY THE OR TO INCLUDE:**
 - **PROTECTION AGAINST AGILE THREAT**
 - **SYSTEM & PLATFORM SOLUTIONS (INCLUDING LASER WARNING RECEIVERS AS PART OF PLATFORM DEFENSIVE SUITS)**
 - **HIGHER OD FILTERS AND OTHER APPROACHES SOONER (HIGHER POWER LASERS MIGHT BE USED AS ANTI-PERSONNEL DEVICES)**
 - **RESEARCH ON THE "DAZZLE" THREAT**
 - **OTHER TECHNIQUES**

EDUCATION & TRAINING

- **EFFECTIVE EDUCATION PROGRAMS ARE NEEDED TO:**
 - **MAKE AVIATORS AWARE OF THE LASER THREAT**
 - **ENABLE THEM TO MAKE VALID ASSESSMENTS OF OBSERVED ENEMY LASER SYSTEMS**
 - **TRAIN THEM TO TAKE APPROPRIATE EVASIVE/AVOIDANCE MEASURES IN THE EVENT OF LASER THREAT EXPOSURE**
- **INCORPORATE "DAZZLE" AND LASER THREAT SIMULATIONS INTO AIR CREW TRAINERS**

UNCLASSIFIED

RECOMMENDATIONS (CONT'D) (U)

UNCLASSIFIED

UNCLASSIFIED

UNCLASSIFIED

RECOMMENDATIONS

R&D PROGRAM

- DEVELOP INTERMEDIATE VISOR PROTECTION DEVICES FOR 4 IDENTIFIED LASER THREAT WAVELENGTHS
- DEVELOP LONG TERM PROTECTION AGAINST THE AGILE THREAT
- DEVELOP COUNTERS TO "DAZZLE" PHENOMENA
- INITIATE STUDIES TOWARD SYSTEM/PLATFORM SOLUTIONS, INCLUDING:
 - LASER WARNING DEVICES & SENSORS FOR INTELLIGENT RESPONSE TRIGGER
 - EXTERNAL (TV) VIEWERS AND HELMUT-MOUNTED DISPLAYS
 - HARDENED CANOPIES
 - OPTICAL SWITCHES
 - MECHANISMS THAT WOULD BE USED ONLY UPON THREAT WARNING

CONDUCT RESEARCH ON

- NONLINEAR OPTICAL MATERIALS (NLO)
- OPTICAL SWITCHES
- LIMITERS

FUNDING

- CONSIDERATION SHOULD BE GIVEN TO FUND THE R&D PROGRAM AT AN ANNUAL LEVEL OF ABOUT \$5M

TERMS OF REFERENCE FOR LASER EYE PROTECTION (U)

UNCLASSIFIED

UNCLASSIFIED

TERMS OF REFERENCE FOR LASER EYE PROTECTION (U)

BACKGROUND (U)

(U) Thousands of lasers are currently deployed for various purposes (e.g., rangefinding and target designation) and could be used against personnel to cause either temporary or permanent eye damage. Of particular concern is the fact that future laser devices could operate anywhere in the visible, near infrared and far infrared bands. The present Navy/Marine Corps program to provide laser eye protection consists of three elements: two directed at discrete wavelength protection and the third, longer term effort under development, against the entire agile laser band.

PROBLEM (U)

- o (U) Laser eye protection devices are wavelength dependent and multiple devices cannot normally be used concurrently. Additionally, cockpit display and visual requirements greatly inhibit protection device versatility. A need exists for a generic laser eye protection device that places no limitation on personnel performance.
- o (U) Navy participation in the development of protection against the entire agile laser band is minimal and only leads to a full capability in 1998.

TASKS (U)

(U) The following subjects and tasks will be reviewed and/or accomplished.

1. (U) Review current Navy and DOD R&D laser eye protection programs.
2. (U) Validate current and projected threat. Specifically, review potential present and future laser devices capable of use against personnel.
3. (U) Review requirements for cockpit compatibility, night vision, and manual dexterity.
4. (U) Determine status of OR to counter the threat.
5. (U) Identify Navy organizational responsibilities for laser eye protection.
6. Assess industrial and academic technology bases.

UNCLASSIFIED

GOAL (U)

(U) To develop recommended courses of action to achieve/accelerate an agile (multi-frequency) laser eye protection capability.

JUL 21 1987

MEMORANDUM FOR THE CHIEF OF NAVAL RESEARCH

Subj: LASER EYE PROTECTION RESEARCH PROGRAMS

A recent Naval Research Advisory Committee Study on Laser Eye Protection concluded that current Navy Laser Eye Protection programs were too narrowly focused toward resolving the eye protection problem by utilizing specific (i.e., at the eye) protection devices such as visors, goggles or eye glasses. The study group concluded that research should be expanded into technologies that could lead toward eventual system/platform solutions, including explorations into:

- (a) Laser Warning Devices
- (b) Indirect Viewing Systems
- (c) Hardened Canopies
- (d) Optical Switches and
- (e) Trigger Mechanisms on Threat Illumination

Accordingly, the Chief of Naval Research is directed to ensure that a research program is initiated and funded to cover the areas listed above and as further outlined in the report which will soon be published from the NRAC panel's review.

TRAINING AND EDUCATION FOR THE LASER BATTLEFIELD THREAT (U)

UNCLASSIFIED

UNCLASSIFIED

THE ASSISTANT SECRETARY OF THE NAVY
(RESEARCH, ENGINEERING AND SYSTEMS)
WASHINGTON, D.C. 20360

JUL 24 1987

**MEMORANDUM FOR THE DIRECTOR, RESEARCH, DEVELOPMENT AND ACQUISITION
(OP-098)**

Subj: TRAINING AND EDUCATION FOR THE LASER BATTLEFIELD THREAT

A recent Naval Research Advisory Committee Study on Laser Eye Protection recommended that the Navy's education and training programs be modified to prepare aviators for the potential laser threat that could be encountered on today's battlefield and the expected proliferation of such systems in the future. The study found that effective education and tactics development programs are needed to:

- a. Insure that existing aircrews have a full "AWARENESS" of the laser threat.
- b. Enable aviators to make rapid, valid assessments of observed enemy lasers.
- c. Train flight crews to take appropriate evasive/avoidance measures in the event of laser threat exposure.

Request you initiate action to ensure a thorough review of the curricula at all aviation training facilities to ensure that classroom material and aircrew trainer simulators are equipped with adequate materials and programs to accomplish the above objectives.

It should be noted that the review identified the attack/strike mission as the highest immediate priority to receive attention in this area. At a later date, other mission disciplines and warfare areas will also require emphasis in this area. Prior to publication of the panel's final report, the findings of this NRAC review can be made available in the form of a briefing. Both Navy and Marine Corps programs should be closely coordinated.

REPRESENTATIVE DANGER ZONE COMPARISON (U)

- o (U) Dazzle is the loss of visual function caused by excessive light in the eye. The light profile is characterized by both temporal and spatial nonuniformity of illumination.
- o (U) The most significant near term threat to the successful completion of a naval aviator's mission is laser-induced night dazzle.
- o (U) Day dazzle and eye damage can become a more significant threat at higher power levels and for pulsed laser sources.

BEHAVIORAL AND PSYCHOLOGICAL IMPLICATIONS

SCHEMATIC ILLUSTRATION OF THE RELATIONSHIP BETWEEN VISUAL EFFICIENCY AND LUMINANCE FOR RECOGNITION AND FOR GUIDANCE VISION. NOTE THAT WHILE THE EFFICIENCY OF RECOGNITION TASKS (SUCH AS READING OR TARGET IDENTIFICATION) ARE SYSTEMATICALLY RELATED TO LUMINANCE, VISUALLY GUIDED BEHAVIORS ARE ESSENTIALLY INDEPENDENT OF LUMINANCE (AS WELL AS IMAGE BLUR) OVER THE FUNCTIONAL RANGE OF THE VISUAL SYSTEM. THEREFORE, LOW TRANSMITTANCE LASER EYE PROTECTION AT DUSKNIGHT WILL:

- DEGRADE/ELIMINATE ALL VISUAL RECOGNITION AND DETECTION OUTSIDE OF COCKPIT (20% RELATIVE EFFICIENCY)
- REDUCE DISPLAY LUMINANCE AND CONTRAST/COLOR CONTRAST BELOW DESIGN SPECIFICATIONS TO THE POINT WHERE RESOLUTION OF IMAGERY IS PREVENTED.

UNCLASSIFIED

FIGURE 7.

BEHAVIORAL AND PSYCHOLOGICAL IMPLICATIONS (U)

PERFORMANCE OF HUMAN-MACHINE SYSTEMS IS OFTEN LIMITED BY BEHAVIORAL

FACTORS (U)

- o (U) Glare can substantially degrade, possibly prevent, visual performance.
 - (U) Short term glare can have the same impact on mission success as permanent eye damage.
- o (U) Glare will differentially affect visual performance as a function of:

UNCLASSIFIED

UNCLASSIFIED

- (U) Type of task (recognition/detection versus orientation/visual guidance)
 - (U) Ambient illumination (day vs. dusk vs. night)
 - (U) Intensity and wavelength (short vs. long wavelength).
 - o (U) Psychophysiological effects can only be reduced/eliminated through adequate eye protection which maintains necessary image quality.
 - (U) High transmittance (photopic, mesopic, and scotopic)
 - (U) Sufficient optical density to eliminate glare
 - (U) No further restrictions to field of view
 - (U) Continuing normal cockpit functions.
 - o (U) Psychological effects of glare can be reduced through:
 - (U) Training (e.g., safe exposures)
 - (U) Development of coping strategies/countermeasures (will also be effective in preventing retinal burns).
- (U) Behavioral research on the effects of coherent light is necessary to provide guidelines for engineering decisions for the development and implementation of laser eye protection.

UNCLASSIFIED

UNCLASSIFIED

THREAT SUMMARY

- THERE IS AN EXISTING AND INCREASING LASER THREAT TO THE NAVAL AVIATOR
- SOME OF IT IS FROM FRIENDLY SYSTEMS (DESIGNATORS, RANGEFINDERS, ETC.)
- THE GREATEST NEAR TERM THREAT IS DAZZLE/FLASH BLINDNESS
- THE THREAT NOW IS AT A FEW DISCRETE WAVELENGTHS
- IT WILL INCLUDE FREQUENCY AGILE LASERS IN THE FUTURE
- WHETHER INTENDED OR NOT, SOVIET LASER SYSTEMS CAN BE USED AS ANTI-PERSONNEL WEAPONS

PRESENT

- LOW POWER SYSTEMS MOSTLY FOR RANGEFINDING/TARGET DESIGNATION
- SOVIET SYSTEMS TYPICALLY MORE POWERFUL THAN WESTERN EQUIVALENTS
- THREAT FROM OWN SYSTEMS SHOULD BE FACTORED

FUTURE

- WIDE SPREAD LASER WEAPON SYSTEMS DEPLOYMENT LIKELY WITHIN NEXT DECADE WITHIN SOVIET/WARSAW PACT FORCES/THIRD WORLD
- INCREASED POWER LEVELS PROBABLE
- TUNEABLE LASER SYSTEMS LIKELY, LENDING SOVIET WARTIME RESERVE MODE (WARM) POTENTIAL
- MAY BE CONSIDERED ESSENTIAL AS COUNTER TO LASER-GUIDED WEAPONS SYSTEM
- ANTI-PERSONNEL USE OFFERS NEAR "UNLIMITED" FIREPOWER

COOPERATIVE EFFORTS AIMED AT THE AGILE THREAT (U)

UNCLASSIFIED

UNCLASSIFIED

TECHNOLOGY OVERVIEW

- THREAT DICTATES NEED FOR MULTIPLE APPROACHES
- DIFFERENT TECHNOLOGIES SHOULD BE COMBINED TO PROTECT AGAINST DIVERSE WAVELENGTHS AND TRUE AGILE THREATS
- PASSIVE (SELF-ACTUATING) AND ACTIVE (DETECT AND REACT) SCHEMES MAY BOTH BE USEFUL
- REMOTE VIEWING (TV OR HMD) PROVIDES ULTIMATE PROTECTION IN HEAVY LASER EXPOSURE ENVIRONMENT
- LASER WARNING SYSTEMS WILL BE IMPORTANT, IF NOT ESSENTIAL
- DEVELOPMENT OF PROCEDURES/AUTOMATIC SYSTEMS FOR DAZZLE ARE NECESSARY

UNCLASSIFIED

PRESENT TECHNICAL APPROACHES

VISORS/EYEGLASSES

- ABSORBING DYES
 - + LARGE ANGULAR EFFECTIVENESS
 - WIDE BANDS REDUCE OVERALL TRANSMISSION
 - NIGHT VISION INTERFERENCE
- HOLOGRAMS
 - + NARROWBAND REJECTION
 - ANGULAR ACCEPTANCE PROBLEM IN VISORS (CAN MAKE CONTACT LENSES, ESPECIALLY FOR HELO PILOTS)
- ALL
 - + SIMPLE RETROFIT, PILOT ACCEPTANCE
 - OD NOT HIGH ENOUGH IF PURPOSEFUL USE OF EVEN EXISTING RANGEFINDERS

POSSIBLE FUTURE APPROACHES

BETTER EYE GLASSES

- AGILE FILTER
- HIGHER OD
- OPTICAL LIMITERS
- MATERIALS (MOSTLY ORGANICS AT THE MOMENT):
 - POLYMERS - NONLINEAR
 - LIQUID XTAL
 - PHOTOCHROMICS
- OPTICAL SWITCHES?

SYSTEM/PLATFORM LEVEL SOLUTIONS (MULTIPLE SYSTEM SOLUTION)

- UV AND IR FILTERING AT CANOPY
- LOW CONCENTRATIONS OF VIS. DYES MAY REDUCE CANOPY GLARE
- DAZZLE PROTECTION: DETECT AND REACT TO SPECIFIC WAVELENGTHS
- HIGH ENERGY PULSES

- FOCAL PLANE PASSIVE (LIMITERS OR SWITCHES) FOR GUNNERS
- REP RATE DETECTORS AND "HIDE AND PEEK" MODE

- REMOVE DIRECT VIEWING - HMD AND TV CAMERAS

MATERIALS RESEARCH:

- NON-LINEAR ($\chi^{(3)}$) MATERIALS (PHASE CONJUGATE MIRRORS, LIMITERS)
- FAST PHOTO CHROMICS
- SEMICONDUCTOR AND PLASMA SWITCHES
- ABLATIVE, FRUSTRATED TOTAL INTERNAL REFLECTION OR PHASE CHANGE SACRIFICIAL MIRRORS

LASER WARNING DEVICES

- LASER SIGNATURES
 - COHERENCE/DIRECTIONALITY - REDUCED AFTER ATMOSPHERIC TRAVEL
 - HIGH INTENSITY
 - BRIGHT REL TO BACKGROUND - ALLOWS FALSE SIGNALS
 - MONOCHROME SPIKE - NEED SPECTRUM ANALYZERS
- PULSE SOURCE
 - USUALLY FIXED REP RATE
 - SMALL ON : OFF RATIO

LONG TERM LASER EYE PROTECTION SUMMARY (U)

UNCLASSIFIED

UNCLASSIFIED

UNCLASSIFIED

NAVY ORGANIZATIONAL RESPONSIBILITIES

- TRI-SERVICE LASER EYE PROTECTION R&D ACTIVITIES ARE FULLY INTEGRATED & PROPERLY ORGANIZED.
- THE CURRENT NAVY ORGANIZATION IS TUNED TO THE PRESENT TECHNICAL APPROACHES FOR THE EYE PROTECTION PROBLEM (E.G., GLASSES, VISORS).
- FUTURE TECHNICAL APPROACHES TO COUNTERING THE AGILE THREATS (E.G., THE SYSTEMS APPROACH) WILL REQUIRE A NEW MULTI-DISCIPLINE ORGANIZATIONAL APPROACH TO SUCCESSFULLY MANAGE THE PLATFORM SOLUTIONS THAT WILL BE REQUIRED.

RECOMMENDATIONS

REQUIREMENTS

- MODIFY THE OR TO INCLUDE:
 - PROTECTION AGAINST AGILE THREAT
 - SYSTEM & PLATFORM SOLUTIONS (INCLUDING LASER WARNING RECEIVERS AS PART OF PLATFORM DEFENSIVE SUITS)
 - HIGHER OD FILTERS AND OTHER APPROACHES SOONER (HIGHER POWER LASERS MIGHT BE USED AS ANTI-PERSONNEL DEVICES)
 - RESEARCH ON THE "DAZZLE" THREAT
 - OTHER TECHNIQUES

EDUCATION & TRAINING

- EFFECTIVE EDUCATION PROGRAMS ARE NEEDED TO:
 - MAKE AVIATORS AWARE OF THE LASER THREAT
 - ENABLE THEM TO MAKE VALID ASSESSMENTS OF OBSERVED ENEMY LASER SYSTEMS
 - TRAIN THEM TO TAKE APPROPRIATE EVASIVE/AVOIDANCE MEASURES IN THE EVENT OF LASER THREAT EXPOSURE
- INCORPORATE "DAZZLE" AND LASER THREAT SIMULATIONS INTO AIR CREW TRAINERS

RECOMMENDATIONS (U)

UNCLASSIFIED

UNCLASSIFIED

RECOMMENDATIONS

INTELLIGENCE

- DEVELOP AND FIELD DEVICES FOR COLLECTING TECHNICAL INTELLIGENCE ON THE LASER THREAT TO:
 - DETECT LASER ILLUMINATION
 - DETERMINE WAVELENGTHS
 - DETERMINE INTENSITIES
 - RECONSTRUCT THE GEOMETRY
 - DETERMINE THE WAVEFORM/PULSE LENGTH/PRF/ETC.
- TASK HUMINT AND OTHER SYSTEMS FOR INFORMATION TO DETERMINE WHAT PROTECTIVE DEVICES AND MEASURES THE SOVIETS ARE USING NOW (OR PLAN TO USE IN THE FUTURE) AGAINST THE LASER THREAT (AND AGAINST THEIR OWN DEVICES).
- HUMINT IS NEEDED RELATIVE TO SOVIETS INTENTIONS REGARDING USING LASERS AS ANTI-PERSONNEL WEAPONS.
