MAY 4 1970

MEMORANDUM FOR: Colonel William Yost
SAFSS

SUBJECT: Trip Coordination

This is to confirm my plans for a visit to SAFSP on 7 and 8 May, 1970. May I request your concurrence with these plans and your assistance in transferring security clearances, etc.

1. LMSS - discussion with [redacted] regarding disposition of remaining LMSS residuals and retention of key files. This discussion was requested by [redacted] and is scheduled for 1330 hours on Thursday, May 7, 1970, with additional discussions as required on Friday, May 8, 1970..

2. Transducer technology - discussion with [redacted] with Mr. Jules Lehmann of NASA Headquarters and Mr. Phillip K. Eckman of NASA's JPL. We request a briefing in the transducer technologies that have been and are being pursued by SP. These would include inflight processing with data readout, dielectric tape, inflight data recording, and related efforts. As we discussed last week, the reason for the request is our desire to pursue efforts in transducer technologies in support of NASA's future planetary and earth observation missions in coordination with your technology efforts. Some of NASA's efforts are probably of interest to [redacted] and these can also be discussed. I have coordinated this proposed discussion with Capt. Geiger, and L/C Sweet has coordinated security aspects with [redacted]. This discussion is planned for 1000 - 1300 hours on Thursday, May 7, 1970.

3. Hexagon Mapping Camera - I would like to discuss with Col. Buzard and Maj. Johnson the specifications of the Itek 12" focal length mapping camera including mounting brackets, weight, power, volume, and required thermal and pressure environments. These are necessary data to determine if it would be feasible to consider further this equipment for a Skylab mission.
